DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The William Hopkins residence is a modest one story black basalt house with limestone quoins and window frames. Brick segmental arches cap all windows, and carved brackets embellish the front porch's posts.

A frame shed addition to the rear housed the kitchen and dining area. This part is in poor condition and its roof needs repair.

A later cinder block bathroom is the only modern alteration to the house. It is located on the right rear.

The original interior of the two rooms in the stone portion remain intact. The walls are paneled with the windows set into the walls with flared casings opening into the rooms. The doors are four panel. The larger room's ceiling is centered with a 5 foot in diameter plaster molding consisting of radiating circles.

STATEMENT OF SIGNIFICANCE

The William Hopkins residence is architecturally significant as a good example of a typical small stone residence of the nineteenth century. Employing local stone, it is stylistically similar to Soda Springs' city hall and many of the structures in Beaver, Utah, and southeast Idaho.

CONTINUATION SHEET

ITEM NUMBER 8 PAGE 1

The William Hopkins residence

8. The William Hopkins residence, as already noted is a good example of a typical small stone residence of the nineteenth century. In its time it was a rather common structure in southeast Idaho as it provided a fairly substantial appearing structure for little cost, as the stone employed was plentiful and fairly easy to work. Building with lava rock basalt had the same advantages as building with brick today, low maintenance, and good energy preservation, certainly a major consideration in southeastern Idaho, the foothills of the Rockies.

All too many of these structures have been altered, especially the more diminutive examples of the genre, as they have been deemed too miniscule for today's living standards. Often these houses have been added onto, as has the Hopkins residence with its cement block bathroom. Frequently the construction of an addition is accompanied by the remodeling of the interior of the original structure. Such is not the case with the Hopkins house. Its interior is remarkably well preserved and displays a quite unique plaster molding in the main room, as discussed in the description.

The Hopkins residence is typical of vernacular stone architecture applied on an extremely modest scale to accommodate the needs of the frontier bachelor or family of two. Being of such a small scale its significance has all too frequently been ignored with the result this sort of structure is becoming a disappearing segment of the Idaho landscape. The Hopkins residence is the best example of its genre in Soda Springs and one of the more intact examples of its style in the state we have found in the course of our survey of the state to date.
