Lista de Figuras

Figura 1-1. Una pala de vapor excava el canal del lado norte de la presa Milner, CA. 1906. <i>Twin Falls Public Library, Clarence E. Bisbee Collection, PC-2084.</i>	8
Figura 1-2. Equipo de caballos dibujados a mano limpia el pincel de salvia, ca. 1910 <i>Twin Falls Public Library, Clarence E. Bisbee Collection, 172.</i>	8
Figura 1-3. Trabajadores cerca de Twin Falls Livery and Feed Barn, ca. 1910. <i>Twin Falls Public Library, Clarence E. Bisbee Collection, 1910.</i>	9
Figura 1-4. Twin Falls City Park, la escuela secundaria y el palacio de justicia del condado, 1912. <i>Twin Falls Public Library, Clarence E. Bisbee Collection, 1033.</i>	9
Figura 1-5. The Idaho Department Store, Twin Falls, ca. 1910. <i>Twin Falls Public Library, Clarence E. Bisbee Collection, GB52.</i>	10
Figura 1-6. Almacenes agrícolas en Twin Falls, 1941. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-038938-D.</i>	10
Figura 2-1. Los gerentes de la FSA se reúnen en Caldwell, Idaho, 1941. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-039179-D.</i>	15
Figura 2-2. Ubicación de los campos de trabajo agrícola de la FSA en Idaho en 1942.	16
Figura 2-3. Firmar fuera del campamento móvil de la FSA en Wilder, Idaho, 1941. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-039175-D.</i>	17
Figura 2-4. Una familia de granjeros cenando en la carpita en la que viven en el campamento móvil de la FSA en Wilder, 1941. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-039200-D.</i>	18
Figura 3-1. Imagen aérea del campo de trabajo Twin Falls en 1946. <i>USGS 1C10000080038, 1946, Earth Explorer.</i>	20
Figura 3-2. Identificación de los edificios del campo de trabajo de Twin Falls en 1946.	21
Figura 3-3. El fotógrafo de la FSA Russell Lee tomó una serie de imágenes del campo de trabajo de la granja migratoria Twin Falls en julio de 1942. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073766-D.</i>	22
Figura 3-4. El campamento, fotografiado en 1942, incluía dos tipos de viviendas: edificios de estilo cuartel y casas pequeñas. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073771-D.</i>	23

Figura 3-5. El campamento tenía cuarenta y siete casitas o cabañas. Cada casa tenía una cocina, sala / comedor, dos recámaras y un baño. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073761-D.</i>	23
Figura 3-6. Había treinta y seis edificios de estilo cuartel en el campamento. Cada edificio se dividió en seis apartamentos. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073774.</i>	24
Figura 3-7. Un residente de un campamento Estadounidense de origen Japonés de camino a las duchas, 1942. Observe las contraventanas que se abren en la parte trasera de un refugio en hilera. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073769-D.</i>	25
Figura 3-8. Los apartamentos en el edificio de estilo cuartel carecían de plomería interior. Los residentes del campamento utilizaron estaciones de confort ubicadas entre las filas de los barracones <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073758-D.</i>	25
Figura 3-9. Cada apartamento media catorce por dieciséis pies cuadrados. Observe cómo este residente Japonés-Estadounidense personalizó su apartamento con recortes del <i>Times-News</i> . <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073756-D.</i>	26
Figura 3-10. Cada apartamento estaba amueblado con un par de literas, una mesa pequeña y dos sillas. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073768-D.</i>	26
Figura 3-11. Los residentes del campamento juegan Go, un juego de mesa Japonés, en 1942. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073765-D.</i>	27
Figura 3-12. A partir de 1942, el campo de trabajo de Twin Falls fue ocupado principalmente por hombres Japoneses Estadounidenses solteros. A medida que la Autoridad de Reubicación de Guerra comenzó a alentar el reasentamiento de unidades familiares fuera de los campos de concentración, un número creciente de familias Estadounidenses de origen Japonés comenzó a residir en el campo. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073753-D.</i>	29
Figura 3-13. Residentes del campamento de Twin Falls lavando platos, 1942. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073757-D.</i>	29
Figura 3-14. James Kazuo y Toshiko Tanaka con su perro Blackie, alrededor de 1947. El edificio detrás de ellos era su casa de dos dormitorios en el campamento de Twin Falls. La ventana de la izquierda era el dormitorio de James. <i>Japanese American National Museum, 2001.179.7.</i>	30
Figura 3-15. Algunas familias Estadounidenses de origen Japonés vivieron en el campamento de Twin Falls hasta finales de la década de 1940. La familia Toyooka—Jim, Fran, Janet y Ronald— se fotografiaron fuera de su casa en el campamento durante el invierno de 1946-1947. <i>Fran Toyooka.</i>	32
Figura 3-16. Janet y Ronald Toyooka en el campamento de Twin Falls, 1946-1947. <i>Fran Toyooka.</i>	32
Figura 3-17. Las pequeñas casas del campamento de Caldwell, fotografiadas en 1941, eran similares en estilo a las del campamento de Twin Falls. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF33-013032-M4.</i>	33
Figura 3-18. Los edificios de estilo cuartel en el campamento de Caldwell, 1941 <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF33-013043-M3.</i>	34
Figura 3-19. Los edificios de estilo cuartel en el campamento de Caldwell, 1941 <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-D039194-D.</i>	34
Figura 3-20. Los edificios de estilo cuartel en el campamento de Twin Falls, fotografiados en 1942, son casi idénticos a los del campamento de Caldwell. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073767-D.</i>	35
Figura 3-21. El fotógrafo de la FSA Russell Lee documentó el campamento de Wilder en 1941 y el campamento de Shelley en 1942. No fotografió algunos de los otros campamentos móviles en Idaho, como Blackfoot, Jerome, Rexburg y Paul. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-039038-D.</i>	36
Figura 3-22. El campamento móvil en Shelley albergó a trabajadores Japoneses Estadounidenses en 1942 y 1943. Para 1944, albergaba principalmente a trabajadores Mexicanos a través del Programa Bracero. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073778-D.</i>	36
Figura 4-1. Extracto del <i>Twin Falls Times-News</i> que detalla el cierre planificado del campo en 1947. <i>Twin Falls Times-News, July 18, 1947.</i>	38
Figura 4-2. Imagen aérea del campamento en 1953 <i>USGS, A010904305380 1953.</i>	40
Figura 4-3. Imagen aérea del campamento en 1978. <i>USGS, 1VERJ00010182 1978.</i>	40
Figura 4-4. Mapa topográfico del campamento de 1964. <i>USGS Twin Falls Quadrangle Maps, 1964.</i>	40

Figura 4-5. El mapa topográfico del campamento de 1979 refleja incorrectamente la remoción del edificio. <i>USGS Twin Falls Quadrangle Maps, 1979.</i>	40
Figura 4-6. Niños escribiendo el horario del Magic Valley Bookmobile, que visitó el campamento semanalmente, en 1971. <i>Idaho Statesman, July 12, 1971.</i>	42
Figura 5-1. Mejoras paisajísticas en El Milagro, ca. 2018. <i>Community Council of Idaho, 2018 Annual Report.</i>	45
Figuras 5-2-5-5. Fotografías aéreas del Conjunto Habitacional El Milagro de 1992 (arriba a la izquierda), 2003 (arriba a la derecha), 2011 (abajo a la izquierda) y 2016 (abajo a la derecha). <i>Google Earth Pro 2020.</i>	46
Figura 5-6. Josefina Valenzuela, haciendo tortillas en su cocina de El Milagro. <i>Andy Sawyer, The Times-News, September 1, 1996.</i>	47
Figura 5-7. El ex labrador Antonio Ortega en el jardín de su casa en El Milagro. <i>Andy Sawyer, The Times-News, September 1, 1996.</i>	48
Figura 5-8. Después de quedarse sin hogar inesperadamente, esta familia, fotografiada en 2016, vivió en El Milagro durante casi seis años y luego pudo comprar una casa cerca. <i>Drew Nash, Twin Falls Times-News, June 29, 2018.</i>	49
Figura 5-9. Un vecino de El Milagro en su cocina en 2018. <i>Community Council of Idaho, 2018 Annual Report.</i>	49
Figura 6-1. Utah-Idaho Sugar Company, junto con otras compañías azucareras, publicaron anuncios de reclutamiento en los periódicos de los campamentos. Esto fue impreso en una edición de marzo de 1943 del <i>Minidoka Irrigator</i> . <i>National Archives and Records Administration, Washington DC, Record Group 210.</i>	56
Figura 6-2. Un anuncio de contratación de Amalgamated Sugar Company en una edición de mayo de 1943 del <i>Minidoka Irrigator</i> destacaba específicamente las viviendas en el campamento de Twin Falls. <i>National Archives and Records Administration, Washington DC, Record Group 210.</i>	57
Figura 6-3. Los trabajadores Japoneses Estadounidenses del campamento de Twin Falls hicieron cortinas con sacos de azúcar vacíos de Amalgamated Sugar Company. La compañía reclutó en gran medida a Estadounidenses de origen Japonés para la mano de obra de remolacha azucarera que tanto necesitaba en la década de 1940. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073755-D.</i>	60
Figura 6-4. Un obrero Japonés-Estadounidense fotografiado en el campamento de Twin Falls en julio de 1942. Representantes de la Amalgamated Sugar Company comenzaron a reclutar Japoneses-Estadounidenses para el campamento de Twin Falls en el centro de reunión temporal en Sacramento, California, en mayo de 1942. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073759-D.</i>	61
Figura 6-5. Los Estadounidenses de origen Japonés que vivían en el campamento de Twin Falls trabajaban principalmente con cultivos como la remolacha azucarera, las papas y las cebollas. Estos trabajadores no identificados fueron fotografiados en julio de 1942. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073809-E.</i>	62
Figura 6-6. Japonés Estadounidense no identificado que vivía en el campamento de Twin Falls en 1942. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073811-E.</i>	63
Figura 6-7. Gran parte del trabajo agrícola era un trabajo pesado, con los Estadounidenses de origen Japonés inclinados en los campos raleando remolacha azucarera o cosechando papas. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073812-E.</i>	63
Figura 7-1. Bracero cosechando papas en Oregon. <i>Oregon State University Special Collections and Archives, P120:2734.</i>	68
Figura 7-2. Los trabajadores migrantes en Twin Falls organizaron una fiesta de trabajadores migrantes en 1957. <i>Idaho State Historical Society, 76-102.65a.</i>	71
Figura 7-3. Hijos de trabajadores migrantes en Twin Falls en preescolar en 2015. <i>Clark Corbin, Idaho Ed News.</i>	72
Figura 8-1. Establecido en 1980, el Centro de Refugiados del College of Southern Idaho ofrece muchos programas para ayudar a los refugiados recién llegados a Twin Falls. <i>Pat Sutphin, Times-News, July 2017.</i>	75

List of Figures

Figure 1-1. A steam shovel digs the North Side Canal from Milner Dam, ca. 1906. <i>Twin Falls Public Library, Clarence E. Bisbee Collection, PC-2084.</i>	85
Figure 1-2. Hand-drawn horse team clears sage brush, ca. 1910. <i>Twin Falls Public Library, Clarence E. Bisbee Collection, 172.</i>	86
Figure 1-3. Workers near the Twin Falls Livery and Feed Barn, ca. 1910. <i>Twin Falls Public Library, Clarence E. Bisbee Collection, 1910.</i>	86
Figure 1-4. Twin Falls City Park, high school, and the county courthouse, 1912. <i>Twin Falls Public Library, Clarence E. Bisbee Collection, 1033.</i>	87
Figure 1-5. The Idaho Department Store, Twin Falls, ca. 1910. <i>Twin Falls Public Library, Clarence E. Bisbee Collection, GB52.</i>	87
Figure 1-6. Agricultural warehouses in Twin Falls, 1941. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-038938-D.</i>	88
Figure 2-1. FSA managers meet at Caldwell, Idaho, 1941. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-039179-D.</i>	92
Figure 2-2. Locations of FSA farm labor camps in Idaho in 1942.	93
Figure 2-3. Sign outside the FSA mobile camp in Wilder, Idaho, 1941. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-039175-D.</i>	94
Figure 2-4. A farm family eating dinner in the tent in which they live at the FSA mobile camp in Wilder, 1941. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-039200-D.</i>	95
Figure 3-1. Aerial image of Twin Falls Labor Camp in 1946. <i>USGS 1CI0000080038, 1946, Earth Explorer.</i>	97
Figure 3-2. Identification of Twin Falls Labor Camp buildings in 1946.	98
Figure 3-3. FSA photographer Russell Lee took a series of images of the Twin Falls Migratory Farm Labor Camp in July 1942. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073766-D.</i>	99
Figure 3-4. The camp, photographed in 1942, included two types of housing—barracks-style buildings and small houses. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073771-D.</i>	100
Figure 3-5. The camp had forty-seven small houses or cottages. Each house had a kitchen, living/dining room, two bedrooms, and a bathroom. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073761-D.</i>	100
Figure 3-6. There were thirty-six barracks style buildings in the camp. Each building was divided into six apartments. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073774.</i>	101

Figure 3-7. A Japanese American camp resident on his way to the showers, 1942. Note the push-out shutters on the back of a row shelter. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073769-D.</i>	102
Figure 3-8. The apartments in the barracks-style building lacked indoor plumbing. Camp residents used comfort stations located between the rows of barracks. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073758-D.</i>	102
Figure 3-9. Each apartment measured fourteen by sixteen square feet. Note how this Japanese American resident personalized his apartment with cut-outs from the <i>Times-News</i> . <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073756-D.</i>	103
Figure 3-10. Each apartment was furnished with a pair of bunk beds, small table, and two chairs. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073768-D.</i>	103
Figure 3-11. Camp residents play Go, a Japanese board game, in 1942. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073765-D.</i>	104
Figure 3-12. Beginning in 1942, the Twin Falls labor camp was occupied primarily by single Japanese American men. As the War Relocation Authority began to encourage family unit resettlement away from the concentration camps, an increasing number of Japanese American families began to reside in the camp. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073753-D.</i>	105
Figure 3-13. Residents of the Twin Falls camp washing dishes, 1942. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073757-D.</i>	106
Figure 3-14. James Kazuo and Toshiko Tanaka with their dog Blackie, circa 1947. The building behind them was their two-bedroom house in the Twin Falls camp. The window on the left was James's bedroom. <i>Japanese American National Museum, 2001.179.7.</i>	106
Figure 3-15. Some Japanese American families lived in the Twin Falls camp until the late 1940s. The Toyooka Family—Jim, Fran, Janet, and Ronald—pictured outside their house at the camp during the winter of 1946-1947. <i>Fran Toyooka.</i>	108
Figure 3-16. Janet and Ronald Toyooka at Twin Falls camp, 1946-1947. <i>Fran Toyooka.</i>	108
Figure 3-17. The small houses at the Caldwell camp, photographed in 1941, were similar in style to those at the Twin Falls camp. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF33-013032-M4.</i>	109
Figure 3-18. The barracks-style buildings at the Caldwell camp, 1941. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF33-013043-M3.</i>	110
Figure 3-19. The barracks-style buildings at the Caldwell camp, 1941. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-039194-D.</i>	110
Figure 3-20. The barracks-style buildings at the Twin Falls camp, pictured in 1942, are nearly identical to those at the Caldwell camp. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073767-D.</i>	111
Figure 3-21. FSA photographer Russell Lee documented the Wilder camp in 1941 and the Shelley camp in 1942. He did not photograph some of the other mobile camps in Idaho, such as Blackfoot, Jerome, Rexburg, and Paul. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-039038-D.</i>	112
Figure 3-22. The mobile camp in Shelley housed Japanese American laborers in 1942 and 1943. By 1944, it primarily housed Mexican laborers through the Bracero Program. <i>Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073778-D.</i>	112
Figure 4-1. Excerpt from the <i>Twin Falls Times-News</i> detailing planned closure of the camp in 1947. <i>Twin Falls Times-News, July 18, 1947.</i>	114
Figure 4-2. Aerial image of the camp in 1953. <i>USGS, A010904305380 1953.</i>	115
Figure 4-3. Aerial image of the camp in 1978. <i>USGS, 1VERJ00010182 1978.</i>	115
Figure 4-4. Topographical map of the camp from 1964. <i>USGS Twin Falls Quadrangle Maps, 1964.</i>	116
Figure 4-5. Topographical map of the camp from 1979, incorrectly reflects building removal. <i>USGS Twin Falls Quadrangle Maps, 1979.</i>	116
Figure 4-6. Children writing the schedule of the Magic Valley Bookmobile, which visited the camp weekly, in 1971. <i>Idaho Statesman, July 12, 1971.</i>	117
Figure 5-1. Landscape improvements at El Milagro, ca. 2018. <i>Community Council of Idaho, 2018 Annual Report.</i>	120

Figures 5-2-5-5. Aerial photographs of El Milagro Housing Complex from 1992 (<i>upper left</i>), 2003 (<i>upper right</i>), 2011 (<i>lower left</i>), and 2016 (<i>lower right</i>). <i>Google Earth Pro 2020.</i>	121
Figure 5-6. Josefina Valenzuela, making tortillas in her kitchen at El Milagro. <i>Andy Sawyer, The Times-News, September 1, 1996.</i>	122
Figure 5-7. Former farm laborer Antonio Ortega in his garden at his house in El Milagro. <i>Andy Sawyer, The Times-News, September 1, 1996.</i>	123
Figure 5-8. After becoming homeless unexpectedly, this family, photographed in 2016, lived at El Milagro for nearly six years and were then able to purchase a home nearby. <i>Drew Nash, Twin Falls Times-News, June 29, 2018.</i>	124
Figure 5-9. A resident of El Milagro in their kitchen in 2018. <i>Community Council of Idaho, 2018 Annual Report.</i>	124
Figure 6-1. The Utah-Idaho Sugar Company, along with other sugar companies, published recruitments ads in camp newspapers. This was printed in a March 1943 issue of the <i>Minidoka Irrigator. National Archives and Records Administration, Washington DC, Record Group 210.</i>	130
Figure 6-2. An Amalgamated Sugar Company recruitment ad in a May 1943 issue of the <i>Minidoka Irrigator</i> specifically highlighted housing at the Twin Falls camp. <i>National Archives and Records Administration, Washington DC, Record Group 210.</i>	131

Cronología

- 1939: Farm Security Administration (FSA) construye el campamento aproximadamente a dos millas al sur de Twin Falls.¹
- 1940: El campo de trabajo de la granja migratoria Twin Falls abre en abril.²
- 1942: Los primeros trabajadores Japoneses Estadounidenses llegan al campo en junio; los primeros trabajadores Mexicanos llegan al campamento ese mismo año.³
- 1943: War Food Administration supera la administración de todos los campos de trabajo de la FSA.⁴
- 1947: La Asociación Patrocinadora de Trabajadores Agrícolas del Condado de Twin Falls adquiere el campamento.⁵
- 1988: Idaho Migrant Council, Inc. (ahora Community Council of Idaho), compra el campamento.⁶
- 1990: El nombre del campamento cambia a El Milagro.⁷
- 2018: El Community Council of Idaho obtiene fondos para comenzar una nueva construcción en El Milagro.⁸

1. Historia Temprana de Idaho y el Desarrollo de Twin Falls

Pueblos Indígenas

Twin Falls, Idaho, se encuentra en las tierras tradicionales de los pueblos Shoshone-Bannock y Shoshone-Paiute. Desde tiempos inmemoriales, las personas de lo que ahora son las tribus Shoshone-Bannock han vivido en el área que abarca partes de lo que hoy es Idaho, Oregon, Montana, Nevada, Utah, Wyoming y Canadá. Los modernos Shoshone-Paiute, que comprenden miembros de los indios Western Shoshone, Northern y Malheur Paiute, han vivido de manera similar en áreas de los actuales Idaho, Nevada y Oregon desde tiempos inmemoriales.⁹

El gobierno de los Estados Unidos obligó a estos grupos indígenas a hacer reservas para que sus tierras pudieran ser ocupadas por muchos blancos y euroamericanos que querían mudarse al oeste. Los Shoshones y Bannock estaban confinados en ese momento a la Reserva India de Fort Hall en 1867 y los Shoshone-Paiute a la Reserva India de Duck Valley en 1877.¹⁰

Asentamiento no Indígena de la Región

Los blancos viajaron por primera vez por el sur de Idaho a principios del siglo XIX, explorando oportunidades para el comercio de pieles y, más tarde, la minería. Los reasentados blancos comenzaron a llegar en mayor número a la región de Twin Falls, más tarde conocida como el Valle Mágico, a mediados del siglo XIX.¹¹ La mayoría llegó a través del sendero Oregon-California, que atravesó el sur de Idaho, siguiendo cerca del río Snake. Aproximadamente 500,000 personas viajaron hacia el oeste en la ruta de 2,000 millas desde Missouri a Oregon y California en 1870, siguiendo muchos senderos indígenas. Estos viajeros formaban parte del movimiento Estadounidense de colonialismo de colonos, que migraban hacia el oeste para encontrar nuevas oportunidades y reclamar tierras ya ocupadas por pueblos indígenas.¹²

La ruta principal del sur de Oregon Trail en Idaho pasó por lo que se convirtió en Twin Falls. Si bien muchos de los miles de habitantes de la isla continuaron hacia destinos en Oregon y California, otros se quedaron o regresaron para establecerse en la región de Twin Falls. Más personas también llegaron al territorio de Idaho después de que se encontró oro en el norte de Idaho en 1860. Para 1870, los buscadores tenían pequeñas operaciones en busca de oro a lo largo del río Snake en el área de Twin Falls. Los colonos se sintieron atraídos por la tierra gratuita disponible a través de concesiones de tierras del gobierno de EE. UU. sin embargo, el paisaje árido en el área de Twin Falls retrasó el asentamiento en grandes cantidades hasta que los proyectos de irrigación cambiaron el paisaje a principios del siglo XX. Entre 1900 y 1910, la gente organizó y planificó las comunidades de Buhl, Filer, Hansen, Hollister y Twin Falls, y estableció el condado de Twin Falls.¹³

A medida que la industria agrícola se fue consolidando, las comunidades del Valle Mágico continuaron creciendo. Los registros del censo de población a lo largo del tiempo no son precisos para esta área porque a menudo no se contabilizan los trabajadores estacionales. Para 1990, la población del condado de Twin Falls era más de 53,792 y la ciudad de Twin Falls más de 28,204. Ese número ha aumentado con el tiempo, con 86,878 en todo el condado y 50,197 en la ciudad en 2019.¹⁴

Desarrollo Económico de la Región

El crecimiento de la población en el área de Twin Falls vino de la mano con el desarrollo económico. Si bien el desarrollo de la minería y la madera prevalecía en otras áreas de Idaho, estas industrias no eran dominantes en Magic Valley. La cría de ganado y ovejas proporcionó ingresos para algunos, ya que los ganaderos conducían rebaños por el área y establecían ranchos cerca de Twin Falls.¹⁵

La industria agrícola se convirtió en el motor económico dominante de la región. Como muchas áreas áridas, el desarrollo de la agricultura regional se debió en gran parte a los esfuerzos de recuperación a principios del siglo XX. Antes de esto, algunos agricultores regionales tenían éxito en la agricultura en el Snake River Canyon y sus alrededores, pero el agua no era confiable. Mucho cambió luego de la aprobación federal de la Ley Carey de 1894, en la que el gobierno proporcionó tierras gratis a los colonos en áreas áridas después de que inversionistas privados construyeron la infraestructura necesaria para aprovechar el agua. Twin Falls Land and Water Company se formó en 1900 para construir la presa Milner y el sistema de canales, transformando el paisaje. La presa y los

¹⁵ Bauer and Jacox, “Historic Agricultural Resources of Twin Falls County, Idaho,” 8–9.

canales se abrieron en 1905, y el área conocida como el tramo de riego Twin Falls Southside pronto estuvo disponible para un suministro de agua confiable.¹⁶ Con suelo cultivable e infraestructura ferroviaria para enviar mercancías, la industria agrícola tenía una base sólida.

Los cultivos locales y los métodos agrícolas evolucionaron con el tiempo. Los cultivos exitosos en el área de Twin Falls incluyeron frutas, verduras y granos. Entre estos, prevalecieron las papas, la remolacha azucarera, los frijoles y el maíz, siendo las papas y la remolacha azucarera los cultivos dominantes. Los métodos agrícolas evolucionaron desde caballos y herramientas manuales para plantar y cosechar manualmente, hasta equipos mecanizados, incluidas las trilladoras accionadas por vapor.¹⁷

Mantener alta la producción agrícola requería más mano de obra de la que estaba disponible. Los Mexicanos, parte de la fuerza laboral de Idaho desde fines del siglo XIX, luego de llegar al norte para comerciar y atrapar animales, y luego trabajar en campos y ferrocarriles, fueron reclutados por grandes operaciones agrícolas. (Consulte el Capítulo 7 para obtener más información sobre la población Latina¹⁸ en Idaho). La industria agrícola prosperó durante la Primera Guerra Mundial con la ayuda de los trabajadores Mexicanos, se redujo en la década de 1920 y luego volvió a crecer en la década de 1930 después de la llegada de los trabajadores agrícolas de los estados de Dust Bowl en el área de Twin Falls.¹⁹

La demanda de un número adecuado de trabajadores agrícolas para satisfacer las necesidades de la industria fue una parte constante de los primeros años del desarrollo de Twin Falls y continúa en el siglo XXI.

2. Administración de Seguridad Agrícola

Descripción General de Farm Security Administration

Administración de Reasentamiento

Creada por orden ejecutiva en abril de 1935, la Administración de Reasentamiento (RA) fue uno de los muchos programas del New Deal establecidos para combatir la Gran Depresión. Existió como una agencia independiente fuera de cualquier departamento federal y se centró en la asistencia a los agricultores pobres afectados por la Depresión. Entre sus cargos estaba la concesión de préstamos a bajo interés a los agricultores para que pudieran comprar mejores tierras, restaurar la productividad de las tierras agrícolas mediante la reconstrucción del suelo y otros proyectos de conversación, y supervisar una variedad de programas de reasentamiento. Esto último incluyó el traslado de trabajadores urbanos a comunidades rurales, el establecimiento de granjas comunales para familias rurales desplazadas y la construcción de campamentos para trabajadores agrícolas migrantes del Medio Oeste y el Sur de Estados Unidos.²⁰

Muchos de los programas de reasentamiento de la RA fueron denunciados por los conservadores como experimentos socialistas. Para contrarrestar esa oposición, el director de la RA, Rexford Tugwell, creó la División de Información en julio de 1935 para dar a conocer la necesidad de los programas de la agencia y sus éxitos. La Sección Histórica, dentro de la División de Información, consistió en un programa de fotografía documental, dirigido por Roy Stryker y con numerosos fotógrafos.²¹

Administración de Seguridad Agrícola

Enfrentando continuos ataques de los conservadores por su supuesta ideología izquierdista, Tugwell renunció en noviembre de 1936. La RA fue absorbida por el Departamento de Agricultura de Estados Unidos al año siguiente y rebautizada como Farm Security Administration (FSA). La FSA continuó muchos de los esfuerzos de la RA, además de iniciar nuevas iniciativas, como trabajar con los deudores de los agricultores para prevenir ejecuciones hipotecarias de granjas y viviendas, introducir programas de atención médica en las regiones rurales y brindar educación sobre nutrición e higiene a los trabajadores. Los programas tuvieron éxito, y un estudio estimó que entre 1937 y

1941, las familias de agricultores que participaron en actividades patrocinadas por la FSA vieron aumentar sus ingresos en un 69 por ciento.²²

La FSA continuó el programa de campo de trabajo migratorio creado por su predecesor. Bajo la RA, el programa había comenzado a proporcionar viviendas de emergencia a personas y familias desplazadas por tormentas de polvo en el Medio Oeste durante las décadas de 1920 y 1930. Muchos eran arrendatarios, aparceros y jornaleros. La FSA construyó y mantuvo dos tipos principales de campamentos: campamentos permanentes durante todo el año y campamentos móviles de tiendas de campaña. Ambos tipos de campamentos proporcionaron alojamiento, atención médica, oportunidades educativas para niños y adultos y actividades recreativas comunitarias. Para 1940, la FSA había construido treinta y siete campos de trabajo permanentes, incluido uno en Twin Falls. En conjunto, estos campamentos albergaron a 35.000 personas, aproximadamente 7.500 familias. La FSA construyó campamentos permanentes en áreas con altas tasas de empleo agrícola. Cada campamento podría albergar a cientos de personas. Los trabajadores de estos campamentos residían en edificios de estilo cuartel, divididos en apartamentos o casas pequeñas. Los campamentos permanentes contaban con instalaciones para la atención de la salud, la educación, la recreación, la lavandería, las duchas y los baños. La FSA también operaba campamentos móviles. También conocidos como campamentos sobre ruedas, sus ubicaciones cambiaban según el lugar donde se necesitaba trabajo agrícola. Los trabajadores vivían en tiendas de campaña de lona, montadas sobre plataformas de madera individuales. Los remolques construidos especialmente proporcionaron energía y agua a los campamentos móviles. Cada campamento también tenía una lavandería, duchas, baños, una enfermería, una carpeta comunitaria para recreación y servicios religiosos y, a menudo, un economato. Algunos campamentos, permanentes o móviles, podrían albergar a más de 1.000 personas.²³

Otro programa que continuó desde la RA hasta la FSA fue la Sección Histórica. Si bien inicialmente fue pensado como un esfuerzo menor por parte de la RA, se convirtió en la actividad más impactante de la FSA. Cuando fue nombrado director de sección por primera vez, Stryker ordenó a los fotógrafos del programa que documentaran solo la vida rural, como agricultores, trabajadores, tierras, cultivos y maquinaria. Estas imágenes estaban destinadas a llamar la atención sobre aquellas personas que necesitan ayuda de la agencia y documentar los logros de la agencia en la rehabilitación y el reasentamiento rural. Pero a los pocos años, tanto Stryker como su personal se interesaron en fotografiar todos los aspectos de la vida Estadounidense. Apareciendo en revistas populares y otras publicaciones, las fotografías de la Sección Histórica ayudaron a crear la imagen de la Gran Depresión en los Estados Unidos. En septiembre de 1942, el programa de fotografía se transfirió a la Oficina de Información de Guerra, y Stryker y el personal se convirtieron en parte de esfuerzos más amplios de propaganda en tiempos de guerra. Entre 1935 y 1944, el programa de

fotografía produjo aproximadamente 175.000 negativos de película en blanco y negro y 1.600 fotografías en color.²⁴

Rol en Evolución

El inicio de la Segunda Guerra Mundial provocó cambios en la FSA. La agencia jugó un papel importante en el traslado forzoso y el encarcelamiento de Estadounidenses de origen Japonés. Cuando el gobierno federal comenzó la expulsión masiva de 110.000 personas de ascendencia japonesa de la costa oeste en marzo de 1942, la FSA trabajó para garantizar que la producción agrícola continuara en California, Oregon, Washington y Arizona. El personal de la FSA supervisó la compra o el alquiler de granjas operadas por Japoneses Estadounidenses por parte de operadores principalmente blancos. Casi la mitad de la población trabajadora Estadounidense de origen Japonés desplazada por la fuerza se había dedicado a la agricultura.²⁵

La expulsión forzosa contribuyó a empeorar la escasez de mano de obra agrícola en los Estados Unidos. Gran parte de la mano de obra agrícola de 1941 se había marchado para trabajar en la industria o en el servicio militar durante la guerra. Los líderes de la industria de la remolacha azucarera en los estados occidentales dirigieron demandas al gobierno federal de fuentes de mano de obra de reemplazo. Al comienzo de la guerra, el azúcar fue reconocido como un producto básico. Además del uso alimentario, la remolacha azucarera se convirtió en alcohol industrial y se utilizó en la fabricación de municiones y caucho sintético. Debido a la guerra con Japón, Estados Unidos ya no importaba azúcar de Filipinas o Java, ya que ambos estaban ahora bajo ocupación japonesa. En respuesta, los agricultores Estadounidenses aumentaron su superficie de remolacha azucarera en un 25 por ciento. En la primavera de 1942, se necesitaban miles de trabajadores para cultivar la cosecha de trabajo intensivo. Las empresas azucareras, los agricultores y los funcionarios estatales y locales presentaron solicitudes a la War Relocation Authority (WRA), la agencia federal a cargo de los Japoneses Estadounidenses encarcelados, para utilizar a estas personas como fuente de mano de obra. La WRA finalmente acordó y permitió que cientos de Japoneses Estadounidenses se mudaran del Centro de Asamblea de Portland en Portland, Oregón, a un campamento móvil de la FSA en Nyssa, Oregón, en mayo de 1942 para trabajar en los campos de remolacha azucarera de la región.²⁶

El establecimiento del primer campo de trabajo agrícola Japonés-Estadounidense durante la guerra marcó otro cambio en los deberes de la FSA. Antes de la guerra, la FSA, a través de sus campos de trabajadores agrícolas migratorios, había proporcionado vivienda y servicios de salud a familias de trabajadores agrícolas migrantes. La escasez de mano de obra nacional llevó a la FSA a utilizar sus campamentos permanentes y móviles como vivienda para una variedad de trabajadores. Estos incluían a estadounidenses de origen japonés reclutados en centros de reunión temporales y campos de concentración; Trabajadores Mexicanos, jamaicanos y bahameños importados mediante acuerdos con sus respectivos gobiernos; y prisioneros de guerra alemanes e italianos. En 1943, la Administración de Alimentos de Guerra (WFA), una agencia federal recientemente establecida, superó todas las actividades laborales agrícolas de la FSA, incluida la operación de los campamentos. Cuando terminó la Segunda Guerra Mundial, la WFA cerró y vendió muchos de los campos de trabajo. Mientras tanto, la FSA se consolidó con la División de préstamos de emergencia para cultivos y piensos de la Farm Credit Administration para convertirse en Farmers Home Administration en 1946.²⁷

La FSA en Idaho

La estructura administrativa de la FSA tenía seis niveles: sede en Washington, DC; doce oficinas regionales; oficinas estatales en la mayoría de los estados; oficinas de distrito dentro de los estados; oficinas del condado en la mayoría de los condados; y una oficina de proyectos para cada proyecto, incluidos los campos de trabajo migratorio. La Región XI, con sede en Portland, supervisó las actividades de la FSA en Alaska, Idaho, Oregon y Washington.²⁸

La FSA construyó dos campamentos permanentes en Idaho: Caldwell en 1938 y Twin Falls en 1939 (consulte el Capítulo 3 para obtener más información sobre ambos campamentos). El campamento de Caldwell también almacenó equipo para todos los campamentos móviles de la FSA en el estado. En 1942, ese equipo incluía 681 carpas, 878 plataformas de carpa, 100 letrinas y 2 remolques de clínica. Las ubicaciones de los campamentos móviles cambiaron dependiendo de dónde se necesitara mano de obra agrícola. En 1942, los campamentos móviles se ubicaron en Blackfoot, Jerome, Nampa, Paul, Rexburg, Shelley y Wilder. En junio de 1942, el FSA superó la operación de un antiguo campamento del Cuerpo de Conservación Civil en Rupert. Conocido como

Figura 2-2. Ubicación de los campos de trabajo agrícola de la FSA en Idaho en 1942.

La Sección Histórica de la FSA capturó unas mil doscientas fotografías de Idaho. Russell Lee produjo casi el 80 por ciento de estas imágenes durante varios viajes al estado entre 1940 y 1942. Fue el más prolífico de todos los fotógrafos de la FSA, tomando más de cinco mil imágenes durante sus siete años de carrera en la agencia. Cuando Estados Unidos entró en guerra, Lee estaba trabajando en California. En abril de 1942, comenzó a documentar el traslado forzoso y el encarcelamiento de Japoneses Estadounidenses para la FSA, y finalmente capturó casi seiscientas imágenes. Lee fotografió a las familias haciendo los preparativos finales en sus hogares, granjas y negocios antes de su mudanza. Documentó a personas en las estaciones de tren esperando ser transportadas al Centro de Asambleas de Santa Anita. También tomó imágenes del Centro de Asambleas de Salinas. Ese verano, Lee tomó fotografías de cuatro campamentos de la FSA que estaban ocupados principalmente por Estadounidenses de origen Japonés: Nyssa en Oregon y Twin Falls, Rupert y Shelley en Idaho. El año anterior, Lee había documentado los campamentos de la FSA en Caldwell y Wilder. Sus veintinueve imágenes del campamento de Twin Falls proporcionan la mejor documentación histórica del sitio y sus ocupantes (consulte los capítulos 3 y 6 para obtener imágenes adicionales).³⁰

3. El Campo de Trabajo de la Granja Migratoria de Twin Falls: 1939-1946

Desarrollo

La Farm Security Administration (FSA) supervisó la construcción del campo de trabajo agrícola migratorio Twin Falls en 1939. Fue uno de los dos campamentos construidos por la agencia federal en Idaho, y el otro está ubicado en Caldwell. Su propósito original era proporcionar vivienda a los agricultores y sus familias desplazados por las tormentas de polvo en el Medio Oeste durante la Gran Depresión. Con el inicio de la Segunda Guerra Mundial y la consiguiente escasez de mano de obra agrícola, el propósito del campo cambió. La FSA comenzó a albergar a un grupo diverso de trabajadores agrícolas en el campamento, incluidos japoneses, Mexicanos y Jamaiquinos.³¹

El potencial de la construcción de un campo de trabajo agrícola federal en Twin Falls se informó por primera vez a fines de marzo de 1939. Durante una reunión del consejo de la ciudad de Twin Falls, un secretario de la ciudad informó al consejo que un ingeniero de la FSA se había puesto en contacto con él con respecto al uso de agua para un proyecto. El mismo empleado también informó que el ingeniero de la FSA se había acercado a Idaho Power Company para traer energía al sitio del proyecto. Grace y J. H. Seaver compartieron durante la reunión que la agencia federal se había acercado a ellos con respecto a la adquisición de su huerto, ubicado a dos millas al sur de la ciudad de Twin Falls.³²

El 4 de mayo de 1939, Grace Seaver vendió sesenta acres en la Sección 29, Township 10 South, Range 17 East al Departamento de Agricultura por \$9,500. A finales de ese mes, la FSA solicitó licitaciones para construir veinticinco casas, doscientos refugios de madera y otras estructuras de soporte. La agencia finalmente emitió un contrato de \$229,048 a R. Goold & Son de Stockton, California. La construcción se llevó a cabo de julio a diciembre de 1939. Anticipando que se necesitarían más viviendas, la FSA emitió una segunda solicitud de licitación en marzo de 1940. Dolan y Buck, también de Stockton, ganaron con una licitación de \$56,091 para construir casas adicionales y otros edificios auxiliares.³³

El arquitecto Burton D. Cairns diseñó los edificios y Garrett Eckbo diseñó la arquitectura del paisaje para el campamento de Twin Falls. Ambos trabajaron para la Región IX de la FSA en San Francisco, junto con el ingeniero de distrito Herbert Hallsteen y el ingeniero regional Nicholas Cirino. Cairns y Eckbo estuvieron involucrados en un accidente automovilístico en Tigard, Oregon, el 15 de diciembre de 1939. Cairns, el conductor, murió instantáneamente y Eckbo sufrió heridas

graves. Eckbo continuó trabajando para la FSA hasta 1942. Vernon DeMars reemplazó a Cairns como arquitecto del distrito. El campamento de Twin Falls puede haber sido uno de los últimos proyectos de la FSA diseñados por Cairns.³⁴

Descripción Física

Figura 3-1. Imagen aérea del campo de trabajo Twin Falls en 1946. USGS 1CI0000080038, 1946, Earth Explorer.

Figura 3-2. Identificación de los edificios del campo de trabajo de Twin Falls en 1946.

Ubicada a dos millas al sur de Twin Falls, en 1122 Washington Street South, la calle principal, Labor Camp Road, fue diseñada en forma de U y proporcionó dos puntos de acceso al campamento. Originalmente estaba sin pavimentar. Una vez completada la primera fase de construcción, a fines de 1939, el campamento constaba de veinticuatro casas de trabajo agrícola, treinta y seis edificios de estilo cuartel, una casa de administrador, un edificio comunitario, un edificio de servicios públicos central con duchas y lavandería, tres estaciones de confort con inodoros y lavabos, una clínica de salud (llamada "sala de aislamiento"), un sistema de almacenamiento y suministro de agua, un sistema de alcantarillado, una puerta de entrada e instalaciones recreativas, que incluyen un campo de béisbol y dos canchas de baloncesto. El edificio comunitario proporcionó espacio para un auditorio, un comedor, una escuela y una guardería. La FSA completó una segunda fase de construcción en la primavera de 1940, construyendo veintitrés casas adicionales para trabajadores agrícolas, veintitrés cobertizos para herramientas, varios garajes para las casas y otras instalaciones.³⁵

Figura 3-3. El fotógrafo de la FSA Russell Lee tomó una serie de imágenes del campo de trabajo de la granja migratoria Twin Falls en julio de 1942. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073766-D.*

Duffy, Regional Director, FSA, Portland to Major W. W. Williver, Executive Director, Washington State Defense Council, Seattle, February 23, 1942; Folder: 505 Relocation Alien July 1941 to June 1942; Box 7; Entry 123: Office of the Director, Correspondence; Record Group 96: Farm Security Administration; National Archives & Records Administration, Seattle, WA; Jean Dinkelacker, "Complete Farm Labor 'City' Taking Rapid Form: Varied Dwelling Facilities Mark \$229,048 Camp," *Idaho Evening Times*, December 8, 1939.

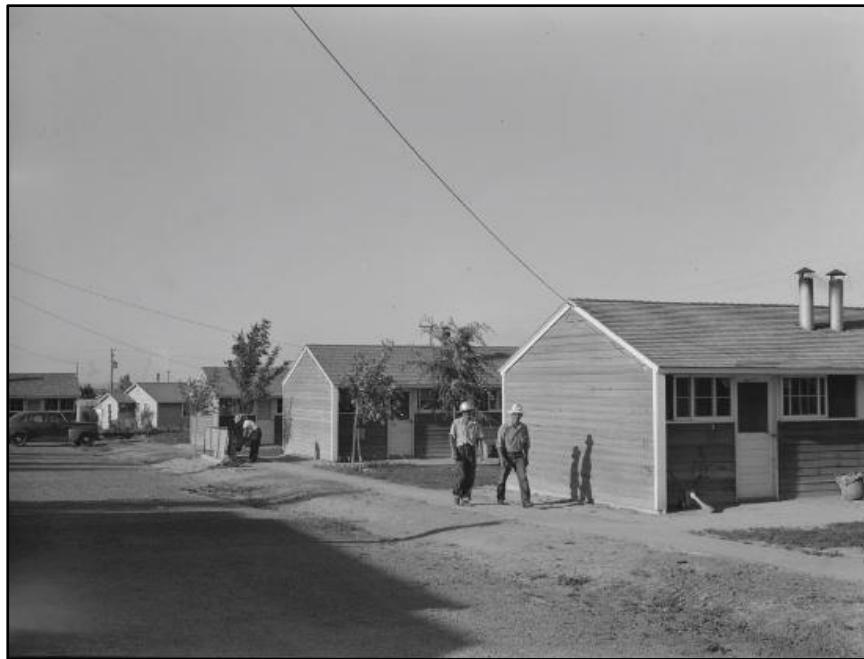

Figura 3-4. El campamento, fotografiado en 1942, incluía dos tipos de viviendas: edificios de estilo cuartel y casas pequeñas. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073771-D*.

Figura 3-5. El campamento tenía cuarenta y siete casitas o cabañas. Cada casa tenía una cocina, sala / comedor, dos recámaras y un baño. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073761-D*.

Cada casa de trabajo agrícola incluía una sala y un comedor combinados, cocina, dos dormitorios, un baño, lavandería, agua corriente y electricidad. Cada casa tenía un diseño idéntico, con la sala / comedor y la cocina en la parte delantera de la casa y los dormitorios y el baño en la parte trasera. La única variación del plan fue la ubicación de la cocina en el lado derecho o izquierdo de la sala de estar / comedor. Las casas fueron pintadas de una variedad de colores, incluyendo beige, arena, amarillo claro y gris verdoso, todos adornados en blanco. Cada casa tenía un césped delantero y una pequeña parcela de jardín en el patio trasero. Este tipo de vivienda se reservaba típicamente para familias que vivían y trabajaban en el área de Twin Falls durante todo el año.³⁶

Figura 3-6. Había treinta y seis edificios de estilo cuartel en el campamento. Cada edificio se dividió en seis apartamentos. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073774.*

El campamento tenía seis filas de seis edificios de estilo cuartel o refugios en fila. Los refugios estaban revestidos con paneles de madera de secuoya de California y tenían techos a dos aguas cubiertos con tejas de cedro. Cada edificio estaba dividido en seis apartamentos, que podían albergar hasta cuatro personas por unidad. Cada apartamento tenía una entrada exterior, con una puerta mosquitera. Los refugios en hilera estaban ubicados en el centro del campamento. Carecían de agua corriente, por lo que los residentes usaban las instalaciones de lavandería y ducha en un edificio separado. Las estaciones de confort, situadas entre los edificios, contenían inodoros y lavabos. Los refugios en hileras solían albergar a trabajadores temporeros. Debido a la falta de agua corriente y al aislamiento insuficiente, la FSA cerró los edificios después de la temporada de cosecha en el otoño y los volvió a abrir durante la temporada de siembra en la primavera.³⁷

Ocupantes y Estilo de Vida

En junio de 1940, cuarenta y una familias vivían en el campo de trabajo migratorio de Twin Falls. Presumiblemente, todas eran familias blancas. James Tanaka, que vivió en el campamento de 1943 a 1949, recordó que estas familias eran originarias principalmente de Arkansas y Oklahoma. Sin embargo, la mayoría de los agricultores migrantes que viven en el noroeste llegaron de Missouri, Kansas, Dakota del Norte y Dakota del Sur.³⁸

Figura 3-11. Los residentes del campamento juegan Go, un juego de mesa Japonés, en 1942. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073765-D.*

Los trabajadores agrícolas estadounidenses de origen Japonés se mudaron por primera vez al campo en junio de 1942 (consulte el Capítulo 6 para obtener más información sobre los estadounidenses de origen Japonés). Llegaron como parte de un amplio esfuerzo, ejecutado por funcionarios del gobierno federal, estatal y local, así como por intereses privados, para abordar la escasez de mano de obra agrícola nacional. A mediados de la década de 1940, un grupo diverso de personas proporcionaba mano de obra agrícola en Idaho, incluidos inmigrantes blancos del Medio Oeste y del Sur, japoneses americanos, nativos americanos, Mexicanos a través del Programa Bracero federal (consulte el Capítulo 7 para obtener más información sobre los trabajadores Latinos), Jamaicanos, prisioneros de guerra alemanes e italianos, objetores de conciencia y hombres, mujeres y niños locales. La composición de los residentes en el campamento de Twin Falls reflejó

³⁸ Letter from J. O. Walker, Director, Resettlement Division, FSA, Washington, D.C. to Walter A. Duffy, Regional Director, Region XI, Portland, July 15, 1940; Folder: 913-Attitude Toward Project; Box 12; Entry 123: Office of the Director, Correspondence; Record Group 96: Farm Security Administration; National Archives & Records Administration, Seattle, WA; Morgen Young Interview with James K. Tanaka, Los Angeles, CA, April 18, 2014, <http://www.uprootedexhibit.com/their-stories/#/?profile=221>.

esta diversificación de la fuerza laboral de Idaho. En octubre de 1943, los residentes del campo incluían a 250 Japoneses Estadounidenses, 175 blancos, 100 Mexicanos y 50 Jamaiquinos.³⁹

Los Estadounidenses de origen Japonés que vivieron en el campo en la década de 1940 residían en apartamentos en edificios de estilo barraca o en pequeñas casas unifamiliares. Por lo general, las personas solteras, en su mayoría hombres, residían en los apartamentos, con dos a cuatro personas por unidad. Los trabajadores de temporada utilizaron los cuarteles, ya que los edificios no eran adecuados para la ocupación invernal. Las familias vivían todo el año en las casas.⁴⁰

Un artículo de septiembre de 1942 en *Minidoka Irrigator*, un periódico semanal publicado en el campo de concentración de Minidoka, ubicado aproximadamente a veintidós millas al noreste de Twin Falls, describió el campo de la siguiente manera:

Los residentes viven en barracones que se han dividido en cuartos de una habitación, de 14 por 16 pies, con pisos de cemento. Las camas de acero de dos pisos, dos pares para cada habitación, están amuebladas. El campamento también proporciona una mesa de metal y dos sillas plegables. Una pequeña estufa de cocina de leña para calentar y cocinar se coloca en cada unidad de vivienda. El campamento cuenta con un suministro adecuado de agua corriente fría y caliente, un enorme lavadero, baños y duchas limpios y modernos. Además, hay una amplia sala de recreación y una biblioteca. También hay disponible una clínica actualizada con una enfermera capacitada para los residentes de la FSA. Se erige como una unidad separada cerca de la entrada del entorno bien ajardinado.⁴¹

Figura 3-12. A partir de 1942, el campo de trabajo de Twin Falls fue ocupado principalmente por hombres Japoneses Estadounidenses solteros. A medida que la Autoridad de Reubicación de Guerra comenzó a alentar el reasentamiento de unidades familiares fuera de los campos de concentración, un número creciente de familias Estadounidenses de origen Japonés comenzó a residir en el campo. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073753-D.*

Figura 3-13. Residentes del campamento de Twin Falls lavando platos, 1942. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073757-D.*

Figura 3-14. James Kazuo y Toshiko Tanaka con su perro Blackie, alrededor de 1947. El edificio detrás de ellos era su casa de dos dormitorios en el campamento de Twin Falls. La ventana de la izquierda era el dormitorio de James. *Japanese American National Museum, 2001.179.7.*

James Kazuo Tanaka llegó al campamento de Twin Falls en la primavera de 1943, a la edad de ocho años. Se mudó con sus padres, James Kenso y Toshiko Tanaka, de Minidoka. Su padre había cosechado remolacha azucarera el otoño anterior y vivía en el campamento de Twin Falls. Toda la familia participó en las temporadas de cosecha de remolacha azucarera de 1943 y 1944, residiendo en los cuarteles del campamento de Twin Falls entre el verano y el otoño, y regresando a Minidoka en los meses de invierno. Después de conseguir un trabajo agrícola permanente a principios de 1945, la familia Tanaka se mudó a una de las casas del campo de trabajo. Permanecieron allí hasta 1949 y finalmente se establecieron en Los Ángeles.⁴²

Cuando se mudó por primera vez al campamento, James conoció a otros estadounidenses de origen japonés, incluidas familias e individuos. También conoció a trabajadores migratorios blancos del Medio Oeste, a quienes describió como miembros de la población más permanente del campamento. Es probable que estos trabajadores hubieran vivido en el campo desde antes de la guerra. Asistió brevemente a la escuela en el edificio comunitario del campamento antes de comenzar las clases en la escuela primaria Bickel en Twin Falls.⁴³

Durante una historia oral de 2014, James compartió algunos de sus recuerdos del campamento:

El campo de trabajo agrícola tenía total libertad. Había algunas cercas agrícolas alrededor, pero podías arrastrarte entre ellas o por debajo o por encima de ellas e ir prácticamente a cualquier parte ... Pudimos ir a la ciudad. Mi principal razón para ir a la ciudad, además de comprar ropa, eran mis películas matinales de los sábados por un cuarto. Por lo general, un vaquero del oeste, con una serie

⁴² Tanaka interview.

⁴³ Tanaka interview.

corta, por lo que tendrías que volver la semana que viene para ver la siguiente parte de la serie ... O haría autostop o, cuando tuviera una bicicleta, podría ir a la ciudad.⁴⁴

Antes del final del encarcelamiento de Japoneses Estadounidenses por parte del gobierno federal, a principios de 1945, a los residentes Japoneses Estadounidenses en el campamento de Twin Falls se les permitió visitar la ciudad de Twin Falls, pero solo con la supervisión del personal de la FSA o de la policía local. Aunque no había alambradas de púas ni torres de vigilancia como Minidoka y otros campos de concentración, el campo de Twin Falls, al igual que otros campos de trabajo agrícola, seguía siendo un lugar de confinamiento para los Estadounidenses de origen Japonés. Durante la guerra, los campamentos tenían toques de queda y no se permitía que los Estadounidenses de origen Japonés abandonaran las instalaciones sin la escolta del personal del campamento, las autoridades locales o sus empleadores.⁴⁵

Hubo al menos un caso conocido de violencia contra los Estadounidenses de origen Japonés que vivían en el campamento de Twin Falls. En julio de 1944, Manzanar Free Press informó que cinco adolescentes blancos de la cercana ciudad de Buhl atacaron a un grupo de Japoneses Estadounidenses en Twin Falls. El incidente fue condenado por las autoridades locales. En respuesta a los ataques, sesenta Estadounidenses de origen Japonés del campo de Twin Falls y cuarenta del campo de Rupert regresaron a los campos de concentración de Poston (Arizona) y Manzanar (California), respectivamente, en protesta.⁴⁶

Figura 3-16. Janet y Ronald Toyooka en el campamento de Twin Falls, 1946-1947. *Fran Toyooka*.

Comparación con Otros Campos de Trabajo Agrícola

La FSA construyó y mantuvo dos tipos de campos de trabajo agrícola: campamentos permanentes o durante todo el año y campamentos móviles o en tiendas de campaña (consulte el Capítulo 2 para obtener más información sobre la FSA en Idaho). Burton D. Cairns, Garrett Eckbo y otros miembros del personal de la oficina de la Región IX de la FSA en San Francisco diseñaron dos campamentos permanentes en Idaho: Twin Falls y Caldwell. La oficina de San Francisco también diseñó campamentos permanentes en Arvin, Brawley, Ceres, Coachella, Firebaugh, Gridley, Marysville, Mineral King, Shafter, Thornton, Tulare, Westley, Winters y Yuba City, California; Yamhill, Oregon; Granger, Walla Walla y Yakima, Washington; Agua Fría, Baxter, Casa Grande, Chandler, Eleven-Mile Corner, Glendale y Yuma, Arizona; y Harlingen, Robstown, Sinton y

Weslaco, Texas.⁴⁷ Como el único otro campamento permanente de la FSA en Idaho, el campamento de Caldwell ofrece la mejor comparación directa con el campamento de Twin Falls.⁴⁸

La FSA construyó un campamento en Caldwell en 1938. Al igual que Twin Falls, fue construido originalmente para albergar principalmente a granjeros blancos desplazados por el Dust Bowl. A principios de la década de 1940, el campamento también albergaba a trabajadores Jamaicanos, Japoneses Estadounidenses y Mexicanos.⁴⁹

Figura 3-17. Las pequeñas casas del campamento de Caldwell, fotografiadas en 1941, eran similares en estilo a las del campamento de Twin Falls. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF33-013032-M4.*

Al igual que el campamento de Twin Falls, el campamento de Caldwell incluía casas pequeñas y edificios de estilo cuartel. El exterior de estos edificios parece haber sido idéntico al del campamento de Twin Falls.⁵⁰ Las casas de Caldwell eran idénticas, cada una con una cocina, una sala de estar, un baño y dos dormitorios. También estaban amuebladas con camas, mesas, sillas y sofás. Cada casa tenía un pequeño césped, un huerto y un garaje. Solo las familias podían vivir en las casas.⁵¹

⁴⁷ Treib and Imbert, *Garrett Eckbo*, 121–22. HRA cannot confirm how many, if any, Region XI FSA camps are extant.

⁴⁸ La HRA reconoce que había otros campamentos permanentes o semipermanentes administrados por la FSA en Idaho, incluidos Burley y Rupert. Sin embargo, como estos campamentos solo tenían edificios de estilo cuartel y no contenían casas pequeñas parecidas a cabañas, la HRA no los considera tan comparables al campamento de Twin Falls como Caldwell. Parece que se han eliminado todos los edificios del antiguo campamento de Rupert. La información disponible sobre el estado físico actual del antiguo campamento de Burley no fue concluyente. “Historical Marker Placed at WWII POW Camp Rupert,” *Times-News*, August 31, 2012, updated March 20, 2013, https://magicvalley.com/news/local/historical-marker-placed-at-wwii-pow-camp-rupert/article_ca518126-6807-539c-be9b-af8327ead5a4.html.

⁴⁹ DeYoung, *Japanese Resettlement in the Boise Valley and Snake River Valley*, 15.

⁵⁰ HRA reviewed photographs of buildings at each location. Construction drawings were not available for comparison.

⁵¹ DeYoung, *Japanese Resettlement in the Boise Valley and Snake River Valley*, 16–17.

Figura 3-18. Los edificios de estilo cuartel en el campamento de Caldwell, 1941
Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF33-013043-M3.

Los edificios de estilo cuartel se dividieron en seis apartamentos cada uno. Cada apartamento incluía camas, mesa, sillas, estantes y una estufa para cocinar y calentar. Los edificios carecían de agua corriente. Un edificio separado albergaba duchas y lavandería, y las estaciones de confort entre los barracones contenían inodoros y lavabos. Estos edificios estaban destinados a albergar a los trabajadores estacionales y no fueron ocupados durante el invierno.⁵²

Figura 3-19. Los edificios de estilo cuartel en el campamento de Caldwell, 1941
Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-D039194-D.

⁵² DeYoung, *Japanese Resettlement in the Boise Valley and Snake River Valley*, 15–16.

Figura 3-20. Los edificios de estilo cuartel en el campamento de Twin Falls, fotografiados en 1942, son casi idénticos a los del campamento de Caldwell. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073767-D.*

El campamento mantenía una pequeña comisaría, que vendía artículos como leche, carne y otros comestibles a los residentes del campamento. El edificio de la comunidad del campamento cumplió múltiples funciones, incluyendo el cine, el comedor y la escuela. En 1946, la escuela del campamento incluía estudiantes japoneses-americanos, Mexicanos, negros y blancos. Los estudiantes en edad de escuela secundaria asistieron a una escuela secundaria local.⁵³

Durante finales de la década de 1930 y principios de la de 1940, el campamento de Caldwell almacenó equipo para todos los campamentos móviles de la FSA en Idaho. Esto incluyó carpas, plataformas de madera para carpas, letrinas y remolques para clínicas de salud. Las ubicaciones exactas de los campamentos móviles cambiaban cada año, ya que la FSA ubicaba a los trabajadores donde más se necesitaban.⁵⁴

La War Food Administration (WFA) superó a la administración del campo de Caldwell, junto con todos los demás campos de trabajo de la FSA, en 1943. Después del final de la Segunda Guerra Mundial, el gobierno federal disolvió la WFA y vendió muchos de los campos de trabajo agrícola. La Autoridad de Vivienda de Caldwell adquirió el campamento en 1950. Ahora conocido como Farmway Village, el sitio continúa albergando a trabajadores agrícolas. Muchos son Mexicanos que trabajan en el condado de Canyon a través del programa de visas agrícolas temporales H-2A.⁵⁵

Figura 3-22. El campamento móvil en Shelley albergó a trabajadores Japoneses Estadounidenses en 1942 y 1943. Para 1944, albergaba principalmente a trabajadores Mexicanos a través del Programa Bracero. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073778-D.*

4. El Campo de Trabajo de la Granja Migratoria de Twin Falls: 1947-1987

Asociación de Patrocinio de Mano de Obra Agrícola del Condado de Twin Falls, Inc.

Cuando terminó la Segunda Guerra Mundial, el gobierno de los Estados Unidos puso fin a todas las operaciones de la Administración de Alimentos de Guerra (WFA). Posteriormente, muchos de los campos de trabajo que entonces operaba la WFA fueron cedidos a organizaciones que deseaban operarlos. En julio de 1947, Darrell H. Moss, director del campo de trabajo de la granja migratoria de Twin Falls, anunció que el programa de trabajo federal estaba terminando y que todos los inquilinos del campo tendrían que irse antes del 25 de septiembre de ese año. Esto incluyó aproximadamente a 500 residentes blancos, Japoneses Americanos, y Mexicanos.⁵⁶

Como todavía se necesitaban trabajadores agrícolas en el área de Twin Falls hasta el final de la temporada de cosecha de ese año, el gobierno federal y los intereses locales llegaron a un acuerdo. El Servicio de Extensión de EE. UU., Amalgamated Sugar Company y la Asociación Patrocinadora de Trabajadores Agrícolas del Condado de Twin Falls acordaron continuar operando el campamento y colocar a los trabajadores donde más se necesitaran hasta el 30 de noviembre de 1947.⁵⁷

Amalgamated Sugar Company solo estuvo involucrada en las operaciones por un corto tiempo, tan pronto como la Asociación Patrocinadora de Trabajadores Agrícolas del Condado de Twin Falls adquirió el campamento.⁵⁸ La Asociación fue uno de los cinco grupos establecidos en el sur de Idaho en 1943. Su función era garantizar que los propietarios de las granjas fueran responsables de sus propias cosechas y tuvieran la obligación de obtener mano de obra para completar la cosecha. Eran organizaciones cooperativas a las que los propietarios de granjas pagaban cuotas para unirse. El dinero de la membresía pagaba la comida y el alojamiento de los trabajadores. (Se suponía que las tarifas de alquiler pagadas por los trabajadores pagaban el mantenimiento del campamento). La

⁵⁶ Bauer and Jacox, “Twin Falls Migratory Farm Labor Camp,” 83-15919, 3; “Farm Labor Camp Will Serve Area Through Harvest,” *Times-News*, July 18, 1947, <http://www.twinfallspubliclibrary.org/newspaper/publication/TN>; “New Law Brightens Labor Camp Future,” *Times-News*, July 24, 1947, <http://www.twinfallspubliclibrary.org/newspaper/publication/TN>; “Tenants Ordered to Vacate Camp,” *Post-Register*, July 10, 1947.

⁵⁷ “Tenants Ordered to Vacate Camp”; “Farm Labor Camp Will Serve Area Through Harvest”; “New Law Brightens Labor Camp Future,” 1.

⁵⁸ It appears that the initial three-way agreement transferring ownership from the federal government to Amalgamated Sugar and Twin Falls County Farm Labor Sponsoring Association did not involve a purchase. It is likely the Twin Falls County Farm Labor Association assumed ownership and operation without purchase. “New Law Brightens Labor Camp Future.”

Asociación de Patrocinio de Trabajadores Agrícolas del Condado de Twin Falls supervisó el mantenimiento y la operación del campamento durante los siguientes cuarenta años.⁵⁹

Figura 4-1. Extracto del *Twin Falls Times-News* que detalla el cierre planificado del campo en 1947. *Twin Falls Times-News, July 18, 1947.*

Descripción Física

Cuando la Asociación de Patrocinio de Trabajadores Agrícolas del Condado de Twin Falls asumió la propiedad, el campus incluía los treinta y seis edificios originales de estilo cuartel y cuarenta y ocho casas de trabajadores agrícolas. Este último incluía las cuarenta y siete casas originales más el edificio que originalmente servía como casa del administrador del campamento. La Asociación alquiló los apartamentos en los edificios estilo cuartel por \$1.40 por unidad familiar, por semana. El campamento tenía 216 apartamentos en total, seis por edificio, con una capacidad total de 864 personas. La Asociación alquiló las casas para trabajadores agrícolas por \$3.55 por semana. Permitiendo cuatro personas por hogar, las casas unifamiliares tenían una capacidad de 192.⁶⁰

Elcock, “Farmer Sponsored Labor in Idaho, 1943,” in *Proceedings of the Eastern Slope and Intermountain Regional Meeting*, American Society of Sugar Beet Technologists, 1944, <https://bsdf-assbt.org/wp-content/uploads/2018/01/FarmerSponsoredLaborinSouthernIdaho1943.pdf>; “Farm Labor Camp Will Serve Area Through Harvest”; “Tenants Ordered to Vacate Camp.”

⁶⁰ “Farm Labor Camp Will Serve Area Through Harvest.”

Los ocupantes del campamento fluctuaban cada año. En 1961, algunos de los edificios de estilo cuartel ya no albergaban a trabajadores. La capacidad del campamento había disminuido de 1,056 a 831. Todas las casas unifamiliares existían, pero un informe estatal de ese año indicaba que solo diez de los treinta y seis edificios originales de estilo cuartel se utilizaban como residencias. En 1965, Twin Falls Camp era el más grande de los setenta y tres campamentos en el sur de Idaho, y albergaba a 1,210 de los aproximadamente 10.000 trabajadores migrantes de la región. Para 1976, la capacidad había disminuido a 400. En ese momento, el alquiler oscilaba entre \$14 y \$20 por semana.⁶¹

Los informes y los recuerdos indican que las condiciones físicas del campamento se deterioraron en los años setenta y ochenta. En 1976, las mejoras del campamento incluyeron algunos recableados eléctricos, reparación de techos y trabajos en las instalaciones de baños. La hermana Rose, miembro de la comunidad de Twin Falls, Mary Boessen, recordó que el campamento era hermoso en la década de 1970 y luego se deterioró en la década de 1980. Aunque los mapas topográficos indican que veintidós de los edificios de estilo cuartel fueron removidos en 1979, los estudios de recursos históricos posteriores reflejan que todos menos siete de los edificios originales de estilo cuartel permanecieron en su lugar.⁶²

Ocupantes y Estilo de Vida

Las personas que vivieron en el campamento desde la década de 1950 hasta la de 1980 fueron principalmente Mexicanos y mexicoamericanos. Las personas y familias que vivían allí eran normalmente trabajadores estacionales. Se mudaban entre los campamentos de Idaho y, a menudo, salían del estado, siguiendo las cosechas o visitando a familiares en otros lugares entre cosechas.⁶³

Las condiciones físicas y los servicios del campamento se deterioraron con los años. El flujo de fondos de la Asociación de Patrocinio de Trabajadores Agrícolas del Condado de Twin Falls, compuesto por las cuotas de membresía de los agricultores locales, resultó ser insuficiente. No podían cubrir muchos de los servicios que la Farm Security Administration y la WFA habían brindado a los residentes del campamento cuando el campamento estaba bajo su propiedad. Estos incluyeron atención médica y educación. Estos servicios finalmente se detuvieron. La seguridad y la limpieza del campamento dependían en gran medida de los administradores individuales del campamento. Organizaciones locales, iglesias y otras personas interesadas se ofrecieron a ayudar a la Asociación en el cuidado del campamento y sus residentes. A menudo, la dirección rechazaba estas ofertas.⁶⁴

En la década de 1970, la gente creó recursos en el campamento para servir mejor a los niños que vivían allí. Muchos trabajadores agrícolas temporales se vieron obligados a llevar a sus hijos pequeños al trabajo por falta de un lugar seguro donde dejarlos. Esto llevó a los grupos religiosos locales a asociarse con la Asociación Cristiana de Mujeres Jóvenes de Twin Falls (YWCA) en 1970 para establecer una guardería en el campamento. En 1971 había una biblioteca y un centro recreativo combinado dentro del complejo. Los niños podían jugar y leer allí, supervisados por voluntarios de la comunidad y empleados de la YWCA. En 1975, el Idaho Migrant Council, una organización de defensa de los trabajadores migrantes en Idaho, solicitó \$ 31,000 a los comisionados del condado de Twin Falls para desarrollar instalaciones recreativas en el campamento. Se desconoce si alguno de los solicitados fue financiado.⁶⁵

Figura 4-6. Niños escribiendo el horario del Magic Valley Bookmobile, que visitó el campamento semanalmente, en 1971.
Idaho Statesman, July 12, 1971.

También en 1975, el Departamento de Vivienda y Desarrollo Urbano abrió una investigación por discriminación racial en el campamento. Los residentes informaron sobre el trato desigual y el acoso contra los Mexicanos y los mexicoamericanos por parte del administrador del campamento. El Consejo de Migrantes de Idaho estaba al tanto de la investigación y buscó un mejor tratamiento para los residentes del campo. Más tarde ese año, Comunidad Voluntaria Mexicana, una organización de trabajadores agrícolas con sede en Chicago, organizó una marcha por el centro de Twin Falls. Ellos protestaron por las malas condiciones sanitarias del campamento, así como por las prácticas discriminatorias. No está claro qué resultó de la investigación, aunque las mejoras físicas en la primavera de 1976 pueden haber estado relacionadas.⁶⁶

5. Campo de Trabajo Agrícola Migratorio Twin Falls - El Milagro: 1988-2018

Consejo de Migrantes de Idaho (Consejo Comunitario de Idaho)

A fines del siglo XX, la membresía de la Asociación de Patrocinio de Trabajadores Agrícolas del Condado de Twin Falls estaba en declive y la necesidad de trabajadores migrantes había evolucionado. Ya no pudo mantener el campamento, la Asociación lo vendió al Idaho Migrant Council, Inc., por \$ 135,000 en 1988. Humberto Fuentes fundó la organización sin fines de lucro Idaho Migrant Council en 1971 para proporcionar vivienda y otros servicios, así como para servir como una organización de defensa de los trabajadores migrantes en el estado.⁶⁷

En 1990, el Idaho Migrant Council cambió el nombre del campamento de Twin Falls Migratory Farm Labor Camp a El Milagro, o The Miracle, Housing Project. El consejo experimentó un cambio de nombre en 2006, convirtiéndose en el Consejo Comunitario de Idaho.⁶⁸

Hoy en día, el Community Council of Idaho es la organización sin fines de lucro más grande que atiende a la población Latina en Idaho (consulte el Capítulo 7 para obtener más información sobre la comunidad Latina en Idaho). Además de operar cinco complejos de viviendas multifamiliares, el consejo lleva a cabo programas de empleo y capacitación, y opera diez centros Head Start para migrantes y temporeros en el sur de Idaho y tres centros de salud en el este de Idaho.⁶⁹

Descripción Física

En el decenio de 1990 se realizaron importantes renovaciones y mejoras de la infraestructura y las viviendas del campamento. Darrel McRoberts, gerente de planta de la planta empacadora Green Giant en Buhl, habló de la “escasez perenne de viviendas” para los trabajadores estacionales.⁷⁰ Describió cuántos trabajadores temporales en el área terminarían una cosecha y buscarían asegurar una vivienda para la próxima cosecha antes de salir de la ciudad para unas vacaciones cortas. Señaló que si no había una vivienda adecuada disponible, es posible que no regresaran. Para abordar esta

necesidad de viviendas suficientes, en 1990, Green Giant, uno de los principales empleadores de los residentes de El Milagro, proporcionó \$15,000 en fondos para rehabilitar edificios en el campus.⁷¹

Pronto vendrían más mejoras. También en 1990, el Departamento de Comercio del Estado de Idaho otorgó a la Ciudad de Twin Falls una Subvención en Bloque para el Desarrollo Comunitario de Idaho para realizar mejoras en el complejo. Esta subvención, combinada con las contribuciones financieras de la Ciudad y la Agencia de Vivienda de Idaho, obtuvo \$637,418 que financiaron las mejoras completadas para 1992. Estas incluyeron la instalación de una línea troncal de alcantarillado y una línea principal de agua, mejorando la presión del agua y proporcionando presión para la supresión de incendios, remodelación de la mayoría de las casas unifamiliares, remodelación de un cuartel en un dúplex de dos dormitorios para familias sin hogar y remodelación de seis cuarteles en veinticuatro apartamentos tipo estudio. En 1999, el Migrant Council recibió una subvención de \$61,000 del proyecto de Desarrollo Rural del Departamento de Agricultura de los Estados Unidos para hacer accesibles veinticuatro unidades en El Milagro.⁷²

La cobertura periodística de los cambios de campamento en la década de 1990, incluida la pavimentación de calles debido a una subvención de bloque de \$1 millón, indica que en 1996, 428 residentes vivían en 101 casas y apartamentos. En ese momento, el alquiler variaba de \$175 a \$319 por mes por un apartamento de tres habitaciones.⁷³

Las renovaciones de los edificios han continuado con el tiempo. En 2012, el programa de mentores YouthBuild El Milagro comenzó a renovar las unidades de vivienda en el campus. Para 2015, la residencia en El Milagro se redujo a 281 personas, con ochenta y cuatro familias entre ellas. De esas familias, diecisiete eran familias de trabajadores agrícolas.⁷⁴

Figura 5-1. Mejoras paisajísticas en El Milagro, ca. 2018. *Community Council of Idaho, 2018 Annual Report*.

En 2019, cuarenta y cinco de las cuarenta y siete casas de trabajo agrícolas originales permanecían en el campamento. La mayoría habían sido modificados, pero aún conservaban sus huellas originales. Ninguno mantuvo sus tubos de estufa originales, sino que tenía ventilaciones de techo modernas. Casi ninguna de las estructuras secundarias asociadas con las casas, como garajes, cobertizos para herramientas y tendederos, permaneció. Algunas casas tenían sus vallas de estacas originales. La mayoría tenía adiciones modernas, incluidas antenas de televisión, antenas parabólicas y cobertizos de almacenamiento.⁷⁵

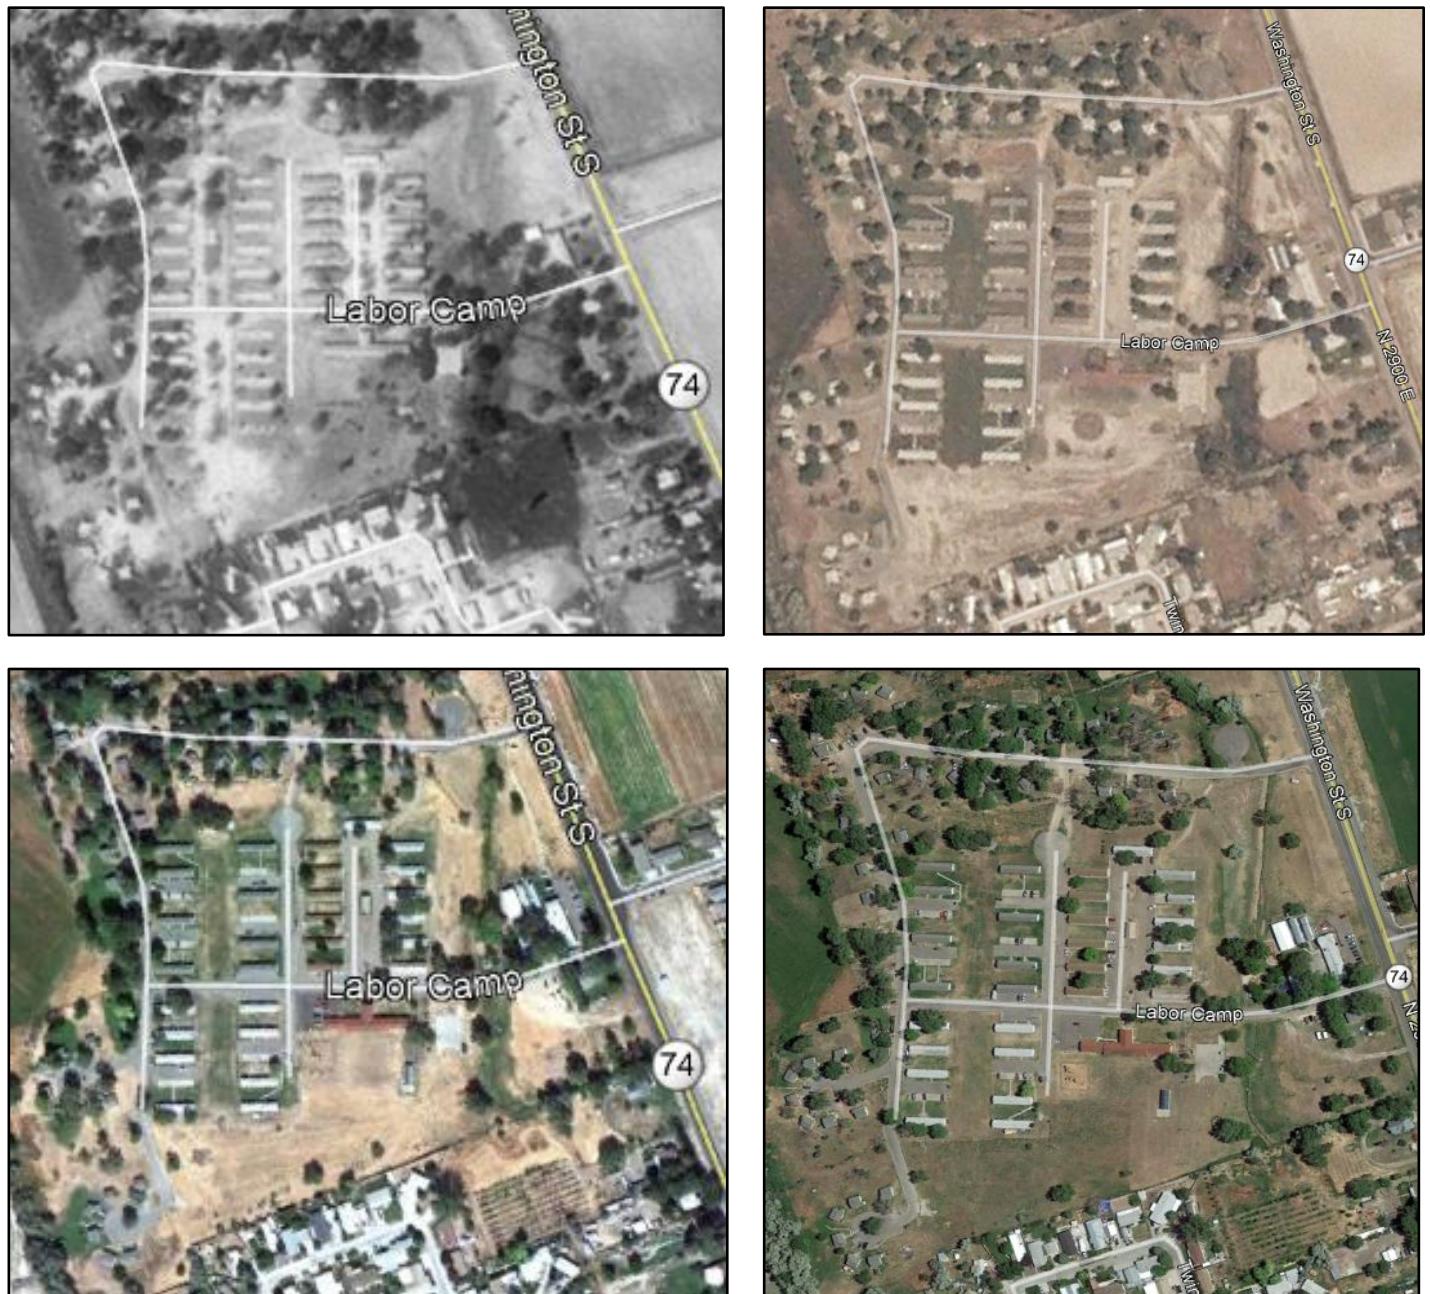

Se conservaban veintinueve de los treinta y seis edificios originales de estilo cuartel, y veintisiete todavía se utilizaban como vivienda. De estas estructuras, algunas eran viviendas unifamiliares, algunas dúplex y otras unidades de cuatro plex.⁷⁶

La puerta de entrada original había sido modificada para convertirla en un edificio para el programa Head Start Migrante y Temporal de Felipe Cabral. El edificio de servicios públicos, que alguna vez albergó duchas y lavandería, se había convertido en una oficina para El Milagro Housing. Un área de reunión pública y una cancha de básquetbol de concreto ahora se encuentran sobre los cimientos del edificio comunitario original.⁷⁷

Ocupantes y Estilo de Vida

La composición de los residentes del antiguo campamento cambió con el tiempo, ya que el campamento se convirtió en un complejo de viviendas para personas de bajos ingresos que no estaban necesariamente relacionadas con el trabajo agrícola. Si bien algunos trabajadores temporales

todavía vivían aquí, en 1996, el gerente Rudy Rodríguez dijo que más del 90 por ciento de los residentes se quedaban todo el año. Atribuyeron esto a los cambios en la industria agrícola que crearon menos puestos de trabajo en los campos. El Milagro ahora albergaba a familias de bajos ingresos y personas solteras sin hogar, y proporcionaba vivienda temporal de emergencia, además de albergar a trabajadores temporales. En 1999, el requisito para calificar para una vivienda en El Milagro era ganar menos que el ingreso medio del área y al menos el 30 por ciento de ese ingreso provenía de la agricultura. En los últimos años, no ha habido restricciones agrícolas sobre los ingresos de los inquilinos.⁷⁸

También se produjeron cambios en el complejo a medida que los edificios se mejoraron físicamente. Josefina Valenzuela, residente desde hace mucho tiempo, informó en 1996 que en sus veintiún años viviendo allí, fue testigo de cómo la “miseria” se convirtió en lo que el *Times-News* parafraseó como “un vecindario más limpio de flores y familia”.⁷⁹

Figura 5-7. El ex labrador Antonio Ortega en el jardín de su casa en El Milagro.
Andy Sanyer, The Times-News, September 1, 1996.

Varios servicios y programas enfocados en la juventud han comenzado en El Milagro a lo largo de los años. Un programa de campamento de verano Head Start comenzó en El Milagro en 1996, cuando apoyó a ochenta y cuatro hijos de trabajadores migrantes, la mayoría de ellos de ciudades vecinas. En 2003, Laurell Ingram, residente del área, comenzó un ministerio cristiano de alcance llamado Kids Klub para los niños que viven en el proyecto de vivienda. Ella y otros voluntarios organizaron proyectos de limpieza, renovaron aulas y organizaron festividades.⁸⁰

En los últimos años, las organizaciones han trabajado para integrar a los residentes de El Milagro con la comunidad de Twin Falls. En 2003, la Academia de Música de Twin Falls Magic Valley formó el Coro de Niños El Milagro, abierto a todos los niños de Twin Falls, para cantar y aprender español. En 2004, el Idaho Migrant Council organizó una celebración pública de El Día de los Niños para promover la cultura y la conciencia mexicanas. Otra organización que conecta a los miembros de la comunidad con el complejo es YouthBuild El Milagro, que se formó en 2012 para ayudar a los adolescentes y adultos jóvenes con tutorías individuales.⁸¹

6. Japonés-Americanos en Idaho

Inmigración Japonesa Temprana a Idaho

La inmigración Japonesa a Estados Unidos comenzó a finales del siglo XIX. Idaho fue uno de los primeros estados en los que se establecieron inmigrantes japoneses. Aquí encontraron empleo en la construcción de ferrocarriles y la industria de la remolacha azucarera. Las fábricas de azúcar construidas a principios del siglo XX en Idaho Falls, Nampa y Sugar City tuvieron éxito en gran parte gracias a los trabajadores Japoneses.⁸²

Los inmigrantes Japoneses enfrentaron formas crecientes de discriminación racial poco después de su llegada a los Estados Unidos. Las leyes aprobadas a nivel federal y estatal prohibían a los japoneses y otros inmigrantes asiáticos convertirse en ciudadanos naturalizados. En 1913, California aprobó la primera ley de tierras para extranjeros del país, que impedía que los extranjeros no elegibles para la ciudadanía compraran tierras. Una década más tarde, Idaho aprobó una ley de tierras anti-Japonesa que se inspiró en la de California. La Ley de inmigración federal de 1924 prohibió la inmigración desde Japón.⁸³

A pesar de tal racismo, los inmigrantes Japoneses (Issei) y sus hijos nacidos en Estados Unidos (Nisei) crearon comunidades en el oeste de Estados Unidos. Establecieron organizaciones sociales y políticas, iglesias, escuelas y periódicos. En 1930, 1.421 personas de ascendencia Japonesa residían en Idaho. Aunque estaban representados en casi todos los condados, existían comunidades concentradas en la región superior del río Snake, a saber, los condados de Bannock, Bingham y Bonneville, y en el condado de Canyon, adyacente a la comunidad Japonesa Estadounidense en el condado de Malheur en Oregon. La presencia de capítulos de la Liga de Ciudadanos Japoneses Americanos en Pocatello, Idaho Falls, Rexburg, y Boise Valley subrayó aún más estas concentraciones en el sureste y suroeste de Idaho.⁸⁴

El censo de Estados Unidos de 1940 registró 1,191 personas de ascendencia Japonesa en Idaho. De esa cifra, el 36 por ciento eran Issei y el 64 por ciento eran Nisei. La disminución en la comunidad Japonesa Estadounidense del estado desde 1930 se debió, en parte, a las muertes entre la primera generación de inmigrantes, algunos Issei que se mudaron fuera del estado y Nisei mayores que abandonaron Idaho en busca de oportunidades educativas y laborales. En la era anterior a la Segunda Guerra Mundial, los Estadounidenses de origen Japonés operaban aproximadamente 150

granjas en Idaho. Un estudio de 1946 proporcionó información sobre dichas granjas en los valles de los ríos Boise y Snake, en el sureste de Oregon y el suroeste de Idaho, un área conocida hoy como Treasure Valley. La comunidad agrícola Japonesa Estadounidense en Boise Valley era pequeña y estaba dispersa antes de la guerra. Estas granjas producían principalmente cebollas, patatas, remolacha azucarera, guisantes, lechugas y zanahorias. La comunidad de Snake River Valley, por otro lado, representaba la mayoría de los Japoneses Estadounidenses en Idaho, con una población estimada de 950 en 1941. Estos agricultores cultivaban principalmente remolacha azucarera, papas y cebollas. Los residentes Japoneses Estadounidenses en el valle del río Snake visitaban con frecuencia las cercanías de Ontario, Oregón, que antes de la guerra tenía un salón comunitario Japonés, un restaurante Japonés y servicios religiosos budistas bimensuales. El valle del río Snake en general, y Ontario en particular, eran conocidos por ser amigables con las personas de ascendencia Japonesa antes, durante y después de la Segunda Guerra Mundial.⁸⁵

Remoción Forzosa y Encarcelamiento Durante la Segunda Guerra Mundial

Estados Unidos entró en la Segunda Guerra Mundial después del ataque naval imperial Japonés del 7 de diciembre de 1941 contra una base naval Estadounidense en Pearl Harbor en Honolulu, Hawaii. Los líderes políticos occidentales utilizaron este ataque, junto con décadas de sentimiento anti-Japonés, para pedir la expulsión de los Estadounidenses de origen Japonés de la costa oeste. A pesar de que no hay evidencia de que los Estadounidenses de origen Japonés representaran una amenaza para la seguridad nacional, el presidente Franklin D. Roosevelt emitió la Orden Ejecutiva 9066 el 19 de febrero de 1942. Esto llevó a la expulsión y encarcelamiento forzoso de 120,000 personas de ascendencia Japonesa, dos tercios de las cuales eran Estadounidenses. los ciudadanos.⁸⁶

El general John L. DeWitt, comandante general del Comando de Defensa Occidental del Ejército de los EE. UU., Pronto creó zonas militares en la costa oeste de las que serían expulsadas todas las personas de ascendencia japonesa. El área incluía toda California, las mitades occidentales de Oregón y Washington y la mitad sur de Arizona. Durante la primavera y el verano de 1942, la Administración de Control Civil en Tiempo de Guerra (WCCA) del Ejército de los EE. UU. Trasladó a los Estadounidenses de origen Japonés que vivían en esta área a centros de reunión temporales. Desde estos centros, los Estadounidenses de origen Japonés fueron trasladados a diez campos de concentración permanentes operados por la Autoridad de Reubicación de Guerra (WRA). Minidoka, en el condado de Jerome, Idaho, fue uno de estos campamentos. Cada campamento era similar, con barracones rodeados de alambre de púas y torres de vigilancia. Algunos Estadounidenses de origen Japonés fueron enviados a otros sitios de confinamiento durante la guerra, incluidas instalaciones adicionales mantenidas por la WRA, campos de internamiento

administrados por el Departamento de Justicia y el Ejército de los EE. UU., Estaciones de detención de inmigrantes, prisiones federales y campos de trabajo agrícola como el de Twin Falls.⁸⁷

En diciembre de 1944, la Corte Suprema de Estados Unidos decidió por unanimidad en el caso Ex parte Mitsuye Endo que el gobierno federal no podía confinar indefinidamente a ciudadanos Estadounidenses de ascendencia japonesa. Esto llevó al Departamento de Guerra de los Estados Unidos a permitir que los Estadounidenses de origen Japonés regresaran a la costa oeste. En 1946, el último de los campos de la WRA cerró. Muchos Estadounidenses de origen Japonés regresaron a la costa oeste, pero las condiciones cambiaron mucho. Debido al traslado forzoso, la mayoría tuvo que vender sus propiedades, negocios y viviendas. Después de la guerra, los Estadounidenses de origen Japonés empezaron de nuevo. Algunos reconstruyeron sus comunidades en la costa oeste, otros establecieron nuevas comunidades en los estados entre montañas y el medio oeste. El gobierno federal reconoció sus irregularidades con la aprobación de la Ley de Libertades Civiles de 1988. La ley incluyó una disculpa formal del presidente Ronald Reagan, así como pagos de compensación de \$20,000 a cada excarcelado sobreviviente.⁸⁸

Papel en el Desarrollo Agrícola

Programa de Licencia Estacional de War Relocation Authority

Casi la mitad de los Estadounidenses de origen Japonés en la costa oeste habían operado granjas o trabajado como jornaleros agrícolas antes de la guerra. Tras el anuncio de la Orden Ejecutiva 9066, los intereses comerciales comenzaron a solicitar acceso a esta fuerza laboral potencial. Muchas de estas solicitudes provinieron de empresas azucareras. El azúcar era un producto básico en tiempos de guerra. Dado que Estados Unidos ya no importaba azúcar de los mercados extranjeros, debido a la guerra con Japón, los agricultores Estadounidenses habían aumentado su superficie cultivada con remolacha azucarera. En 1942, los agricultores plantaron más de un millón de acres de remolacha azucarera, un aumento del 25 por ciento con respecto a la temporada anterior. La mayor parte de la mano de obra existente se había marchado a trabajos industriales en tiempos de guerra o al servicio militar. Los agricultores, especialmente en los estados entre montañas donde se habían plantado medio millón de acres, necesitaban desesperadamente trabajadores para cultivar y cosechar la

cosecha de trabajo intensivo. Las empresas azucareras, que contrataban a los agricultores para obtener las materias primas, encabezaron los pedidos de mano de obra de reemplazo.⁸⁹

El director de la WRA, Milton Eisenhower, convocó una reunión de gobernadores occidentales a principios de abril de 1942. Durante la reunión, esperaba finalizar los planes para el traslado forzoso de Japoneses Estadounidenses a campos de concentración del interior. También quería explorar las posibilidades de utilizar esta comunidad como fuerza de trabajo agrícola. Muchos gobernadores expresaron sentimientos antijaponeses durante la reunión, pero Chase Clark de Idaho fue especialmente hostil. Admitió abiertamente su propio racismo, afirmando: "Odiaría, aunque no supiera nada al respecto, después de mi muerte, que la gente de Idaho me hiciera responsable en un momento como este por haber llevado a Idaho lleno de Japonés durante mi administración. Quiero admitir desde el principio que tengo tantos prejuicios que mi razonamiento puede estar un poco fuera de lugar, porque no confío en ninguno de ellos."⁹⁰ El Fiscal General de Idaho declaró en la misma reunión que "todos los japoneses deberían ser enviados a campos de concentración durante el resto de la guerra. Queremos que este sea un país de blancos."⁹¹ Clark también abogó por poner a los Estadounidenses de origen Japonés en campos de concentración, pero inicialmente protestó contra la ubicación de un campo de este tipo en Idaho. También se opuso a traer trabajadores Japoneses Estadounidenses al estado, a pesar de las protestas de sus electores de que esa mano de obra se necesitaba desesperadamente.⁹²

Dada la retórica racista expresada por muchos de los gobernadores, así como los temores de una posible violencia en las comunidades a las que podrían ser enviados los Estadounidenses de origen Japonés, Eisenhower decidió que la WRA no seguiría ningún programa de trabajo agrícola por el momento. Los funcionarios estatales y locales, sin embargo, tomaron medidas adicionales. El gobernador de Oregon, Charles Sprague, apeló al presidente Roosevelt, ya que se necesitaba esa mano de obra de remolacha azucarera en el condado de Malheur. Fue solo después de que el presidente ordenó a Eisenhower que pusiera esos trabajadores a disposición de los estados occidentales que la WCCA y la WRA permitieron a los japoneses-Estadounidenses dejar los centros de reunión temporales para trabajar en el campo, a partir de mayo de 1942. Con la crisis laboral en Idaho, el mismo Clark cedió y permitió que los trabajadores Japoneses Estadounidenses ingresaran al estado. En junio, brindó garantía por escrito a la WRA de que el estado pagaría los salarios

vigentes a estas personas; brindar protección, vivienda, atención médica y alimentación; y organizar todo el transporte.⁹³

El movimiento de los Estadounidenses de origen Japonés de los centros de reunión temporales a las granjas del interior y los campos de trabajo marcó el comienzo del Programa de Licencia Estacional de la WRA. Entre junio de 1942 y diciembre de 1944, la WRA ayudó a implementar más de 33,000 contratos de trabajo agrícola (Ver Tabla 6-1). La WRA definió la licencia estacional como el trabajo agrícola que debe realizarse durante un período de tiempo específico en un área específicamente definida. La mayoría de las personas y familias con licencia estacional primero tenían que ser autorizadas por la Oficina Federal de Investigaciones, luego se les otorgaban permisos que estipulaban dónde y durante cuánto tiempo se les permitía trabajar fuera de los campos de concentración. Una vez fuera de temporada, se podía solicitar una licencia indefinida y abandonar definitivamente los campos de concentración, aunque hasta enero de 1945 nadie podía regresar a la costa oeste. El Programa de Licencia Estacional fue parte de los esfuerzos más amplios de reasentamiento de la WRA para trasladar a los Estadounidenses de origen Japonés de forma permanente lejos de la costa oeste.⁹⁴

Contratación de Trabajadores

Las empresas azucareras fueron las primeras en reclutar activamente a trabajadores Japoneses Estadounidenses de los centros de concentración temporal y los campos de concentración. Amalgamated Sugar Company, American Crystal Sugar Company, Great Western Sugar Company, Holly Sugar Company y Utah-Idaho Sugar Company utilizaron mano de obra Japonesa Estadounidense durante la guerra. Estas empresas colocaron anuncios en periódicos de campos de concentración, como los incluidos por Utah-Idaho Sugar y Amalgamated Sugar en Minidoka Irrigator. Dichos anuncios generalmente enfatizaban el trabajo de temporada como una oportunidad para escapar de los confines del campamento. Pero también promocionaron el trabajo como el deber patriótico de los Estadounidenses de origen Japonés, ignorando el hecho de que el gobierno federal había encarcelado injustamente a estos ciudadanos Estadounidenses y les había negado sus libertades civiles. Los representantes de la compañía azucarera visitaron los lugares de confinamiento y colocaron avisos de reclutamiento en los tablones de anuncios de los pasillos comunitarios y en otras áreas públicas.⁹⁵

⁹⁵ Fiset, “Thinning, Topping, and Loading,” 127; “The History of Japanese American Farm Labor Camps.”

YOU DON'T NEED TO WAIT ANY LONGER TO GET OUT

Every evacuee has been looking forward to the day when he could permanently leave the relocation center that has been his temporary residence, but not a real home, these long and tiresome months.

"Some day," he has said, "I'll leave here . . . to return to my former home, or to start over in a new and friendly community. Some day I'll be a part of America again . . . to produce or fight for it."

Well, that day has come to those who will take it . . . Here's how: Get yourself a job on a farm . . . to begin with. Sign up for thinning and blocking beets; that's one of the first jobs of the season.

Pick yourself a friendly community, where a variety of crops are grown. Then work through the spring and summer, taking the crops as they come along . . . returning to sugar beets in the fall.

HERE ARE THE REWARDS:

- 1** Freedom to work for yourself and your family at prevailing high wages (rates of minimum pay for beet workers are guaranteed by Federal order);
- 2** Adequate housing (the Federal government requires every farmer to supply this before his offer of employment can be officially approved);
- 3** A new chance to make friends for yourself and for all other persons of Japanese birth or ancestry;
- 4** A stepping stone to permanent year-round employment in agriculture, or industry;
- 5** Healthful employment . . . for yourself and for other members of your family, if you have one, even down to fourteen-year-old boys and girls;
- 6** An opportunity to produce more food for freedom, thereby helping America win the war and the peace to follow;
- 7** A means of earning money for an education or for profitable investment, now or in the future.

SUGAR BEETS are the best way out for the greatest number of evacuees. When you accept a beet contract, take one with the organization that pioneered the way for evacuee job seekers nearly a year ago; take one with an organization that can give you a wide choice of locations and climates.

Utah-Idaho Sugar Company has factories in five states from the Dakotas to the Pacific Coast. Thousands of growers in hundreds of western communities are looking for evacuee help. We can put you in touch with the right place for you. For complete information see your project employment director or write to this pioneer sugar company.

Figura 6-2. Un anuncio de contratación de Amalgamated Sugar Company en una edición de mayo de 1943 del *Minidoka Irrigator* destacaba específicamente las viviendas en el campamento de Twin Falls. *National Archives and Records Administration, Washington DC, Record Group 210*.

Representantes de las empresas azucareras y del Servicio de Empleo de los EE. UU. Atendieron las oficinas de empleo en los centros de reunión y los campos de concentración. En estas oficinas, las personas revisaron los contratos de los agricultores. Dichos contratos estipulaban el trabajo esperado, los salarios y la vivienda. Se ofreció una variedad de viviendas, desde viviendas en granjas privadas hasta campos de trabajo permanentes y móviles operados por la Farm Security Administration (FSA). Este último generalmente ofrecía mejores condiciones de vida que las viviendas privadas, como lo demostró un hombre Estadounidense de origen Japonés que informó que vivía en una choza en ruinas en la propiedad de un granjero que, según él, no era mejor que un gallinero.⁹⁶

Inicialmente, fue difícil reclutar trabajadores, ya que no estaba claro cómo las comunidades locales podrían recibir a los Estadounidenses de origen Japonés. Cuando los representantes de la compañía azucarera visitaron el Puyallup Assembly Center en junio de 1942, encontraron un recorte de periódico que describía un discurso que el gobernador Clark había dado al Club de Leones en Grangeville, Idaho, el 22 de mayo. En lo que se conoció como el "discurso de la rata," Clark declaró que "los japoneses viven como ratas, se reproducen como ratas y actúan como ratas. No los queremos. . . ubicado permanentemente en nuestro estado."⁹⁷ Muchos Estadounidenses de origen Japonés tenían miedo de viajar a áreas que demostraban actitudes tan abiertamente racistas.⁹⁸

La recepción de los trabajadores Japoneses Estadounidenses en las comunidades locales varió. Las personas que participaron en el Programa de Licencia Estacional compartieron información a través de cartas o artículos en los periódicos del campamento sobre sus experiencias. Los que trabajaban en el oeste de Idaho y el este de Oregon en general informaron haber sido bien recibidos, mientras que los que trabajaban en Montana experimentaron una hostilidad flagrante. Algunas empresas, incluidas algunas en Twin Falls, se negaron a atender a los clientes Japoneses Estadounidenses.⁹⁹

Pero suficientes Japoneses Estadounidenses informaron a los centros de reunión y campos de concentración que las condiciones eran favorables y que un número cada vez mayor de personas se inscribió para trabajos agrícolas en 1942 y 1943. Inicialmente, la mayoría de los hombres se inscribieron para ese trabajo, pero a medida que continuó el Programa de Licencia Estacional, más mujeres y familias abandonaron los campos de concentración en busca de oportunidades de trabajo agrícola. La gente abandonó las instalaciones de la WRA por muchas razones: la capacidad de ganar mejores salarios, ya que podían ganar más en unos pocos días que en un mes trabajando en los campamentos; la oportunidad de escapar del alambre de púas y de los guardias armados; y la oportunidad de contribuir al esfuerzo bélico.¹⁰⁰

¹⁰⁰ Fiset, "Thinning, Topping, and Loading," 127–29.

Seichi Hayashida, en una historia oral de 1989, habló de su decisión de incorporarse al trabajo agrícola en 1942:

... Para obtener una licencia, para salir del campamento, tenías que responder muchas preguntas, y era una licencia temporal. No te ibas de forma permanente. Tuvimos que regresar en tantos meses ... Y como éramos agricultores, yo era agricultor, mi esposa era de una familia de agricultores, así que ese era el único trabajo que estaba realmente abierto en ese momento, el primer año, trabajo agrícola. en el este de Oregon, oeste de Idaho y por eso salimos, porque no me gustó la vida en el campamento, ya sabes, estar encerrado en una milla cuadrada con otras 10,000 personas. Entonces, esta es la razón por la que salimos tan pronto como pudimos. Pasé menos tiempo en campamentos que la mayoría de la gente.¹⁰¹

Carl Nomura dejó Manzanar para trabajar en una granja en Idaho en 1942. Primero fue a un campamento móvil de la FSA en Paul y luego vivió en un antiguo campamento del Cuerpo de Conservación Civil convertido en una instalación permanente de la FSA en Rupert. En sus memorias de 2003, recordó que “se desarrolló una enorme escasez de mano de obra en Idaho, Utah, Montana y Colorado cuando los agricultores perdieron a sus trabajadores en el esfuerzo de guerra. Desesperados, los agricultores acudían a nosotros en busca de ayuda. A nosotros, a su vez, se nos ofreció la oportunidad de aventurarnos fuera de la cerca de alambre de púas.”¹⁰² Aunque escapó del alambre de púas, escribió que todavía estaba bajo vigilancia mientras estaba en los campos de trabajo.¹⁰³

Figura 6-3. Los trabajadores Japoneses Estadounidenses del campamento de Twin Falls hicieron cortinas con sacos de azúcar vacíos de Amalgamated Sugar Company. La compañía reclutó en gran medida a Estadounidenses de origen Japonés para la mano de obra de remolacha azucarera que tanto necesitaba en la década de 1940. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073755-D.*

Representantes de Amalgamated Sugar Company llegaron al Centro de Asambleas de Sacramento en California el 28 de mayo de 1942 para reclutar trabajadores para cultivar remolacha azucarera en Idaho. Un pequeño grupo firmó contratos para trabajar en los 6,500 acres de remolacha azucarera del condado de Twin Falls, y se les pagará el salario vigente de \$9.50 por acre o cuarenta y cinco centavos la hora. Se les dio la opción de vivir en un campamento de la FSA o en viviendas proporcionadas por agricultores locales. El 2 de junio, treinta y cinco hombres y una mujer llegaron al campo de trabajo de la granja migratoria Twin Falls. Fueron los primeros Estadounidenses de origen Japonés que vivieron y trabajaron en el campamento.¹⁰⁴

Los representantes de la compañía azucarera también fueron reclutados en los campos de concentración de WRA, una vez que abrieron en el verano y otoño de 1942. Los trabajadores llegaron al campo de trabajo de la granja migratoria Twin Falls de Heart Mountain, Manzanar, Minidoka y Poston. Ubicado a menos de veintidós millas del campamento de Twin Falls, Minidoka proporcionó el flujo más constante de trabajadores Japoneses Estadounidenses entre 1942 y 1944.¹⁰⁵

Figura 6-4. Un obrero Japonés-Estadounidense fotografiado en el campamento de Twin Falls en julio de 1942. Representantes de la Amalgamated Sugar Company comenzaron a reclutar Japoneses-Estadounidenses para el campamento de Twin Falls en el centro de reunión temporal en Sacramento, California, en mayo de 1942. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073759-D*.

Contribuciones a la Agricultura

Figura 6-5. Los Estadounidenses de origen Japonés que vivían en el campamento de Twin Falls trabajaban principalmente con cultivos como la remolacha azucarera, las papas y las cebollas. Estos trabajadores no identificados fueron fotografiados en julio de 1942. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073809-E.*

Los Estadounidenses de origen Japonés contribuyeron a la agricultura en los Estados Unidos. En 1942, durante el primer año del Programa de Licencia Estacional de la WRA, gran parte del trabajo se centró en el cultivo y la cosecha de remolacha azucarera en los estados entre montañas. Un artículo de junio de 1942 en el *Pacific Citizen* incluía la declaración de un representante del Servicio de Empleo de los Estados Unidos de que los Estadounidenses de origen Japonés habían rescatado la cosecha de remolacha azucarera de Idaho por \$16 millones esa primavera. El mismo artículo señaló que los trabajadores no estaban bajo vigilancia armada. Sin embargo, estaban bajo vigilancia en los campos de trabajo, con el movimiento fuera de los campos restringido y los visitantes externos limitados. A fines de 1942, los funcionarios estatales y locales, los representantes de las compañías azucareras y los agricultores acreditaron a los japoneses-Estadounidenses por haber salvado las cosechas de remolacha azucarera en Idaho, así como en Montana, Wyoming y Utah.¹⁰⁶

¹⁰⁶ “Japanese Workers Save Idaho Beet Crop,” *Pacific Citizen*, June 18, 1942, 1, 7; Fiset, “Thinning, Topping, and Loading,” 134.

Figura 6-6. Japonés Estadounidense no identificado que vivía en el campamento de Twin Falls en 1942. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073811-E*.

Figura 6-7. Gran parte del trabajo agrícola era un trabajo pesado, con los Estadounidenses de origen Japonés inclinados en los campos raleando remolacha azucarera o cosechando papas. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073812-E*.

Los Estadounidenses de origen Japonés también proporcionaron mano de obra para otros cultivos en Idaho, como papas, cebollas y frutas de árboles. En el otoño de 1943, los intereses locales reconocieron a los Estadounidenses de origen Japonés por salvar las cosechas de remolacha azucarera y papa ese año.¹⁰⁷

Cuando finalizó el Programa de Licencia Estacional a fines de 1944, más de la mitad de los participantes habían podido convertir su licencia estacional en licencia indefinida de los campos de concentración. Durante los tres años del programa, se estimó que los trabajadores Japoneses Estadounidenses habían ahorrado una quinta parte de la superficie cultivada de remolacha azucarera del país.¹⁰⁸

Comunidad Japonesa Americana de Posguerra en Idaho

Miles de Japoneses Estadounidenses vivieron y trabajaron en Idaho durante la Segunda Guerra Mundial. Muchos llegaron con permisos de vacaciones estacionales emitidos por la WRA, lo que les permitió abandonar los centros de reunión temporales y los campos de concentración por un período de tiempo. Entre los campos de concentración, la mayoría de los trabajadores provenían de Minidoka, pero también llegaron otros desde el río Gila, Granada (Amache), Heart Mountain, Manzanar, Poston, Topaz y Tule Lake. Algunas personas y familias pudieron obtener un empleo permanente y trabajaron con la WRA para convertir su licencia estacional en licencia indefinida.¹⁰⁹

Después de la guerra, 3,932 Estadounidenses de origen Japonés se reasentaron en Idaho. Muchos hogares establecieron en Treasure Valley, un área que cubre los valles de Boise y Snake River, así como en el condado de Malheur, Oregon. Los condados de Idaho que vieron el mayor aumento de residentes Japoneses Estadounidenses en el período de posguerra fueron Canyon, Payette y Washington, con concentraciones particulares cerca de las ciudades de Caldwell, Payette y Weiser. Todos estos condados limitan con el condado de Malheur, Oregón, cuya comunidad Japonesa Estadounidense creció de 137 en 1940 a 1,170 en 1950, un aumento del 750 por ciento. Muchos Issei, Nisei y Sansei (tercera generación) se establecieron en el Valle del Tesoro después de la guerra, y lo encontraron más acogedor que las casas que se habían visto obligados a abandonar en la costa oeste. La ciudad de Ontario sirvió como centro de la comunidad Japonesa Estadounidense de Treasure Valley, con restaurantes japoneses y tiendas de comestibles, una planta de fabricación de tofu, un templo budista, una iglesia metodista y la práctica médica dirigida por un médico Japonés Estadounidense.¹¹⁰

La población Estadounidense de origen Japonés en Magic Valley en el sur de Idaho no experimentó el mismo crecimiento de posguerra que Treasure Valley. Entre 1940 y 1950, la comunidad Japonesa Estadounidense del condado de Twin Falls, sitio del campamento de Twin

Falls, creció de cuarenta y seis a setenta y ocho. El condado de Jerome, donde se encontraba Minidoka, obtuvo solo un residente Estadounidense de origen Japonés durante el mismo período, según los registros del censo federal. Aunque los Estadounidenses de origen Japonés sin duda contribuyeron a la agricultura en el sur de Idaho, la mayoría no se estableció de forma permanente en esta parte del estado en los años inmediatos de la posguerra.¹¹¹

¹¹¹ Sims, “The ‘Free Zone’ Nikkei,” 249.

7. Comunidad Latina en Idaho

Contribuciones Tempranas de los Trabajadores Mexicanos en la Agricultura Regional

Los Latinos¹¹² comenzaron a llegar a Idaho en la década de 1860. La mayoría eran hombres de México que se mudaban al norte para trabajar como mineros, jornaleros agrícolas, ferroviarios, empacadores de mulas, tramperos y ganaderos. En 1870, la Oficina del Censo de los Estados Unidos registró sesenta personas de ascendencia Latina viviendo en el territorio de Idaho. Pocos se asentaron en la región en el siglo XIX.¹¹³

La inmigración mexicana a Idaho aumentó en las primeras décadas del siglo XX. A medida que se expandía la industria agrícola del estado, los agricultores necesitaban mano de obra para satisfacer las crecientes demandas. El gobierno federal eximió a los trabajadores Latinos de las leyes de inmigración recientemente aprobadas que tenían como objetivo ciertas nacionalidades, exigían pruebas de alfabetización e imponían otras restricciones. Se alentó a los hombres a inmigrar con sus familias, en un esfuerzo por evitar que rompan los contratos laborales y desalentar la integración en las comunidades de Idaho.¹¹⁴ En una historia oral, Felicitas Pérez García recordó haberse mudado con su esposo a Shelley en 1910 para trabajar en una planta procesadora de remolacha azucarera. No pudieron encontrar ninguna vivienda, por lo que finalmente construyeron su casa y muebles. Ella recordó: "Hice mi cama con tablas y las sábanas con sacos de maíz. Cosería cuatro juntos. Luego cogí un poco de pasto, o lo que fuera, y lo puse en el medio... haría todo lo posible. Encontraríamos casas que quedaron vacías y conseguiríamos cosas. Hice cortinas con los sacos de harina."¹¹⁵

La demanda de trabajadores agrícolas aumentó durante la Primera Guerra Mundial y las empresas azucareras contrataron directamente trabajadores Mexicanos para plantar, cultivar y cosechar remolacha azucarera. La Utah-Idaho Sugar Company contrató a unos 1,500 Mexicanos en 1918 para trabajar tanto en Utah como en Idaho. Poco después de su llegada a Idaho, muchos trabajadores presentaron quejas ante el consulado mexicano en California. Afirieron que sus salarios, vivienda y disponibilidad de trabajo no eran los que habían acordado con los reclutadores de la empresa azucarera. En respuesta, William McVety, comisionado laboral del estado de Idaho, investigó las condiciones de los trabajadores Mexicanos que viven en Twin Falls, Idaho Falls y Blackfoot. El ex gobernador de Idaho, William J. McConnell, realizó investigaciones adicionales en

¹¹² Este contexto utiliza el término latino en lugar de latín, siguiendo la práctica actual del Consejo Comunitario de Idaho. La erudición histórica moderna a menudo usa el término Latinx en referencia a personas que viven en los Estados Unidos y tienen vínculos ancestrales y culturales con América Latina. Latinx es un término inclusivo y neutral en cuanto al género que reemplaza a Latino y Latina.

¹¹³ Mary Malone, "Hispanic history of Idaho," *University of Idaho Argonaut*, October 16, 2014; McFarland, "Growing Hispanic population part of Idaho's history," *Idaho State Journal*, August 15, 2015.

Blackfoot. Informes posteriores destacaron el racismo que enfrentan estos trabajadores, pero a menudo culparon a los Mexicanos por las condiciones a las que se enfrentaban. Poco cambió para los trabajadores Latinos, que continuaron siendo reclutados tanto por empresas como por agricultores en las décadas de 1920 y 1930. La activista cultural e historiadora Ana María Nevárez-Schachtell descubrió que esos reclutadores les hacían promesas a los inmigrantes Mexicanos que nunca cumplieron.¹¹⁶ Estos individuos, según Nevárez-Schachtell, “decidieron correr el riesgo y dejar a sus familias, sus tierras, empezar una nueva vida y venir a El Norte, y quedaron muy desilusionados. Primero que nada, no había respeto por los derechos humanos y las empresas que les ofrecían vivienda y buenos salarios... todo era mentira.”¹¹⁷

El Programa Bracero

A medida que avanzaba el siglo XX, continuaron las demandas de mano de obra agrícola en Idaho. Los proyectos de recuperación en Idaho convirtieron millones de acres de tierras áridas en tierras de cultivo viables a fines de la década de 1930. La década siguiente, la escasez de mano de obra agrícola afectó a muchos estados del oeste y entre montañas, incluido Idaho. El inicio de la Segunda Guerra Mundial agotó los grupos anteriores de trabajadores agrícolas, ya que muchos se fueron a trabajos industriales en tiempos de guerra o se unieron al ejército. En 1942, la crisis laboral amenazó la producción agrícola. En respuesta, los gobiernos de Estados Unidos y México emitieron una serie de acuerdos que permiten a millones de Mexicanos trabajar bajo contrato en Estados Unidos por cortos períodos de tiempo. En agosto de 1942, el presidente Franklin D. Roosevelt emitió una orden ejecutiva que estableció el Programa de Trabajo Agrícola Mexicano.¹¹⁸

El Programa de Trabajo Agrícola Mexicano era más conocido como el Programa Bracero, el nombre de los trabajadores Mexicanos que trabajaban con sus brazos y manos, siendo “brazo” la palabra en español por brazo. A nivel nacional, el programa duró desde 1942 hasta 1964, con aproximadamente 4,6 millones de contratos emitidos. La mayoría eran contratos de trabajo agrícola, pero los braceros también trabajaron en la construcción y mantenimiento de ferrocarriles durante la década de 1940. A través del programa, un bracero ingresaba a Estados Unidos con un contrato de seis o doce meses. Luego fue asignado a una región particular del país. Una vez que expiraba un contrato, se requería que el bracero regresara a México. Allí podría firmar otro contrato y luego regresar a Estados Unidos a trabajar. Durante la guerra, varias agencias del gobierno federal se coordinaron con empresas agrícolas privadas y agricultores para supervisar el reclutamiento, el transporte, la vivienda y la subsistencia de los trabajadores.¹¹⁹

Figura 7-1. Bracero cosechando papas en Oregon. *Oregon State University Special Collections and Archives, P120:2734*.

Más de 15,000 Mexicanos fueron reclutados para trabajar en Idaho a través del Programa Bracero. Constituyeron el mayor porcentaje de trabajadores agrícolas transportados por agencias federales durante la Segunda Guerra Mundial. Otros grupos de trabajadores reclutados para proporcionar mano de obra agrícola crítica en tiempos de guerra fueron los inmigrantes blancos, los nativos americanos, los Jamaiquinos y los japoneses americanos (consulte el Capítulo 6 para obtener más información sobre los japoneses americanos en Idaho). En 1946, los braceros representaban el 70 por ciento de los trabajadores no locales en la División Noroeste del Servicio de Extensión de EE. UU., Un área que incluye Washington, Oregon, Idaho, Utah, Montana, y Wyoming.¹²⁰

¹²⁰ Gamboa, *Mexican Labor & World War II*, 57–58.

Amalgamated Sugar Company reclutó a los primeros trabajadores Mexicanos en el campo de trabajo de la granja migratoria Twin Falls en 1942. No se sabe si estos individuos fueron reclutados a través del Programa Bracero o mediante esfuerzos privados de la empresa. Los trabajadores se unieron a otros que ya vivían en el campo, incluidos inmigrantes blancos y Estadounidenses de origen Japonés. Para 1947, más de mil Mexicanos estaban trabajando en el área de Twin Falls, y al menos cincuenta vivían en el campamento de Twin Falls.¹²¹

Los Estadounidenses de origen Japonés encarcelados por el gobierno federal durante la Segunda Guerra Mundial habían proporcionado un flujo constante de trabajadores agrícolas. Los Estadounidenses de origen Japonés llegaron al campo de trabajo de la granja migratoria Twin Falls desde varios campos de concentración, y Minidoka proporcionó el mayor número de trabajadores. Cuando el ejército Estadounidense comenzó a reclutar hombres Estadounidenses de origen Japonés, la fuerza laboral disponible se redujo casi a la mitad. Las empresas azucareras, los agricultores y otros intereses dependían cada vez más de los trabajadores Mexicanos a través del Programa Bracero.¹²²

Los Mexicanos que participaron en el programa enfrentaron una discriminación y racismo considerables en todo Estados Unidos. En Idaho, los braceros organizaron huelgas para protestar contra el maltrato, los bajos salarios y las malas condiciones de vivienda. En 1945, Victor Prock, mientras vivía y trabajaba en el campo de trabajo de la granja migratoria Twin Falls, fue arrestado por ser un agitador laboral. Buscaba un aumento de un centavo para la cobertura de cebolla y había intentado reunir a otros trabajadores a su alrededor. Fue multado con diez dólares. En 1946, cientos de trabajadores Mexicanos en Treasure Valley se declararon en huelga. Ellos protestaron contra los productores locales de remolacha azucarera que habían fijado salarios por hora veinte centavos más bajos que la tarifa establecida por el servicio de extensión. Desde los campos de trabajo en Nampa, Marsing, Franklin y Upper Deer Flat, los trabajadores marcharon por las calles de Nampa y se negaron a trabajar hasta que se alcanzara el salario estándar. Los agricultores acordaron pagar los salarios, pero los funcionarios del condado amenazaron con deportar a cualquiera que violara los términos de la huelga. El consulado mexicano en Salt Lake City intervino repetidamente a favor de los braceros en huelga. A fines de 1946, el gobierno mexicano se negó a enviar trabajadores adicionales hasta que mejoraran las condiciones.¹²³

La continuación de la discriminación, así como las condiciones de vida y de trabajo deficientes, llevaron al cierre del Programa Bracero en Idaho en 1948. El programa continuó a nivel nacional durante otros dieciséis años. Como en otras partes de los Estados Unidos, el programa creó una red

informal de migración de México a Idaho. Muchos braceros permanecieron en el estado después de que expiraron sus contratos y ayudaron a hacer crecer la comunidad Latina de la región.¹²⁴

La Comunidad Crece

Las personas y familias Latinas continuaron mudándose al norte después de que terminó el Programa Bracero. La gente emigró de California y Texas a Idaho por trabajo. Las empresas azucareras continuaron reclutando trabajadores Latinos. Amalgamated Sugar Company, con fábricas en Nampa, Idaho y Nyssa, Oregon, reclutó familias Mexicanas de Rio Grande Valley, Texas, para trabajar en los campos de remolacha azucarera desde la primavera hasta el otoño. Las empresas, desesperadas por tener trabajadores, a veces ofrecían préstamos para cubrir los gastos de viaje.¹²⁵

Una vez que terminó la temporada de remolacha azucarera, las familias migrantes pasaron a la siguiente oportunidad laboral. Humberto Fuentes, fundador del Idaho Migrant Council, recordó el movimiento anual de su propia familia, “Desde Nampa, íbamos al este de Idaho para la cosecha de papa en el área de Pocatello y Blackfoot. Desde allí, nos dirigiríamos al oeste de Texas donde trabajaríamos durante dos o tres semanas. Luego, regresaríamos al Valle del Río Grande alrededor de noviembre o a tiempo para Navidad. Al año siguiente, volvimos a hacer lo mismo.”¹²⁶

Esta nueva ola de trabajadores Latinos enfrentó una discriminación similar a la de los braceros antes que ellos. Los Latinos experimentaron racismo en los procesos de contratación, la obtención de vivienda y en negocios como restaurantes y cines. Esperanza García se mudó por primera vez a Idaho en 1955. Al igual que otros Mexicanos en ese momento, la entonces joven de diecisiete años y su familia habían sido reclutados en Texas por agricultores de Idaho. Durante algunos años, siguieron las oportunidades laborales de los inmigrantes en Idaho, Oregon, California y Texas. Ella y su familia finalmente se establecieron en el condado de Canyon, Idaho. Recordó que “La situación en Idaho en esos años ... a menudo hablamos de los carteles que decían, 'No se permiten perros ni Mexicanos'. La discriminación estaba muy viva. No sabías hablar español en una tienda. Te dirían que hables inglés o te vayas”. El mexicano-Estadounidense Antonio Rodríguez recuerda que a partir de 1959, se colocaron carteles en los negocios de Nampa que decían que no servirían a judíos, Mexicanos o Nativos Americanos.¹²⁷

En los últimos años, el número de trabajadores temporales en Idaho ha disminuido. Esto se debe en parte a una mayor industrialización de las operaciones agrícolas, lo que significa que se necesitan menos personas para realizar el trabajo en los campos y las fábricas, y porque más trabajadores que antes eran temporales se están estableciendo en las comunidades. Lucinda Padilla, enlace migrante del Distrito Escolar de Twin Falls, señaló en 2016 que la mayoría de las familias no quieren que sus hijos se muden y corren el riesgo de faltar a la escuela. Ese año, la coordinadora de migrantes del distrito, Abby Montano, estimó que el 80 por ciento de las familias a las que servían en el programa de migrantes del distrito escolar se estaban volviendo "más estables" y no seguían los ciclos laborales anuales en otras ciudades.¹²⁸

Comunidad Latino en Idaho Hoy

La inmigración de México a Idaho continuó creciendo a fines del siglo XX. La inmigración de otros países de América Latina, particularmente de América Central, también se expandió a fines del siglo XX y principios del XXI. Cada vez más, la comunidad Latina en Idaho, como todo Estados Unidos, está formada por ciudadanos Estadounidenses.¹²⁹

La comunidad Latina es la población de más rápido crecimiento en Idaho. Según el Departamento de Trabajo de Idaho, entre 2010 y 2019, la población Latina aumentó en un 30.5 por ciento. Los Latinos representan el 12.8 por ciento de la población de Idaho, menos que el resto del país con un 18.5 por ciento de población Latina en general.¹³⁰

A partir de 2019, Twin Falls y el Magic Valley circundante contienen la mayor proporción de Latinos en el estado, con un 24.7 por ciento. Esto se debe principalmente a las granjas y las operaciones de procesamiento de alimentos que emplean a trabajadores Latinos. Otras regiones de Idaho contenían las siguientes poblaciones Latinas, a partir de 2019: suroeste, 14.1 por ciento; sureste, 11.9 por ciento; este, 11.7 por ciento; norte, 4.5 por ciento; y centro norte, 4.2 por ciento.¹³¹

¹²⁹ McFarland, “Growing Hispanic population part of Idaho’s history.”

¹³⁰ Nicole Foy, “Report: Idaho’s Latino population grew faster than the rest of the state’s last year,” *Idaho Statesman* (Boise), July 18, 2020, <http://www.newsbank.com>.

¹³¹ Foy, “Report: Idaho’s Latino population grew faster than the rest of the state’s last year.”

La comunidad Latina ha tenido presencia en Idaho desde antes de que fuera un estado. Como reflexionó la activista e historiadora Ana María Nevárez-Schachtell, “el trabajador Mexicano es una parte muy importante del estado de Idaho, pero lamentablemente la historia quedó fuera de los libros de historia. El trabajador Mexicano ha sufrido mucha discriminación y aquí estamos, tantos años después, todavía luchando.”¹³²

¹³² Foy, “We do not like the Mexican.”

8. Trabajadores Agrícolas de BIPOC en Idaho Hoy

Negros, Indígenas, y Personas de Color en la Industria Agrícola de Idaho

El desarrollo y el éxito de la industria agrícola de Idaho ha dependido del trabajo de la gente de color. Además de los trabajadores Japoneses Estadounidenses y Latinos tratados en profundidad en este contexto debido a su conexión con El Milagro, los negros, Indígenas, y otras personas de color han hecho contribuciones al crecimiento agrícola de Idaho. Los registros de 1943 indican que cincuenta Jamaiquinos vivían en el campamento (algunos de los 550 Jamaiquinos que la Farm Security Administration dispuso para ir a trabajar a Idaho ese año), y en 1946, quince personas negras residían en el campamento. Los trabajadores agrícolas negros también llegaron a Idaho desde Arizona en la década de 1950 para trabajar en los campos. Aunque la investigación inicial no conectó a los pueblos indígenas con El Milagro directamente, los navajos llegaron a Twin Falls en 1946 para cosechar remolacha azucarera durante lo que el *Idaho Statesman* llamó una "escasez crítica de trabajadores de la cosecha," una escasez que amenazó a la industria agrícola durante e inmediatamente después. Segunda Guerra Mundial (consulte los capítulos 3, 6, y 7 para obtener más información sobre esta escasez).¹³³ La cobertura de los periódicos de 1970 indica que la industria agrícola de Idaho continuó siendo asistida por pueblos indígenas que vivían fuera del estado, con 800 indígenas reclutados de Nuevo México para mover aspersores en grandes proyectos de riego en 1969 y 1970.¹³⁴

Las personas de color realizan un trabajo crucial en la industria agrícola de Idaho, además de trabajar en tecnología, silvicultura, construcción, atención médica y otras industrias. En 2016, más de 4,000 personas llegaron a Idaho como trabajadores invitados, muchos de ellos de México. Muchos refugiados de países como Afganistán, Birmania, Congo, Eritrea, Irak, y Sudán se han asentado en Twin Falls en los últimos años. Un artículo de 2016 del *Washington Post* discutió la codependencia entre los residentes blancos de Twin Falls y los refugiados recientes. Si bien el racismo entre algunos residentes locales ha creado una oposición vocal a la inmigración y la comunidad de refugiados, la industria agrícola depende del trabajo de nuevos inmigrantes y refugiados. El artículo señala que los empleadores de las granjas y fábricas del condado de Twin Falls dijeron que "se perderían sin la fuerza laboral de bajos salarios". Un representante de la Asociación de Lecheros de Idaho dijo: "Lo

Vivienda de Temporada y de Bajos Ingresos en Twin Falls

Muchas comunidades en Magic Valley y en otras partes de Idaho están creciendo y necesitan viviendas de calidad para trabajadores temporales y personas de bajos ingresos. Community Council of Idaho opera cuatro complejos de viviendas en el sur de Idaho además de El Milagro: Colonia de Colores, en Twin Falls; Proyecto Esperanza, en Heyburn; El Rancho Grand Estates, en American Falls; y Colonia Cesar Chavez, en Blackfoot.¹³⁶

En 2018, el Community Council of Idaho comenzó un esfuerzo para reconstruir El Milagro, con el objetivo de crear un espacio de reunión comunitario y viviendas asequibles. La organización tiene

un plan de tres fases para reformar el complejo, construir todas las viviendas nuevas, un parque empresarial profesional para empresas sin fines de lucro y un espacio de reunión comunitaria para programas para jóvenes, clínicas de salud, servicios dentales, laboratorios de computación y áreas recreativas. En última instancia, el proyecto busca ampliar la capacidad, de 95 unidades en total en 2019 a aproximadamente 240 unidades.¹³⁷

La Fase I del proyecto, la construcción de sesenta unidades de vivienda, fue seleccionada para Créditos Tributarios para Viviendas de Bajos Ingresos en 2018. El Consejo Comunitario de Idaho estima que el costo de la Fase I es de \$10 millones. La organización está llevando a cabo una campaña de capital, buscando subvenciones y donaciones privadas, para recaudar fondos para completar todo el proyecto.¹³⁸

La remodelación propuesta de El Milagro exige la eliminación de la mayoría de los edificios originales del complejo. Se mantendrá una de las instalaciones de baño, conocidas como estaciones de confort. Este edificio incluirá carteles interpretativos sobre la historia de El Milagro. Además, se rehabilitará o reconstruirá uno de los edificios estilo cuartel.

1. Early Idaho History and the Development of Twin Falls

Indigenous People

Twin Falls, Idaho, is in the traditional homelands of the Shoshone-Bannock and Shoshone-Paiute peoples. Since time immemorial, people from what is now the Shoshone-Bannock Tribes have lived in the area spanning parts of modern-day Idaho, Oregon, Montana, Nevada, Utah, Wyoming, and Canada. The modern Shoshone-Paiute, comprising members of Western Shoshone, Northern, and Malheur Paiute Indians, have similarly lived in areas of modern-day Idaho, Nevada, and Oregon since time immemorial.¹⁴⁷

The U.S. government forced these Indigenous groups into reservations so their land could be occupied by the many white and Euroamerican people who wanted to move west. The Shoshones and Bannocks were confined at that time to the Fort Hall Indian Reservation in 1867 and the Shoshone-Paiute to the Duck Valley Indian Reservation in 1877.¹⁴⁸

Non-Indigenous Settlement of the Region

White people first traveled through southern Idaho in the early nineteenth century, exploring opportunities for fur trading and, later, mining. White settlers began arriving in greater numbers to the Twin Falls region, later known as the Magic Valley, in the mid-nineteenth century.¹⁴⁹ Most came via the Oregon-California Trail, which traversed southern Idaho, following near the Snake River. Approximately 500,000 people traveled westward on the 2,000-mile route from Missouri to Oregon and California by 1870, following many Indigenous trails. These travelers were part of the United States' movement of settler colonialism, migrating westward to find new opportunities and claim land already occupied by Indigenous people.¹⁵⁰

¹⁴⁹ The Magic Valley comprises Blaine, Camas, Cassia, Gooding, Jerome, Lincoln, Minidoka, and Twin Falls Counties.

¹⁵⁰ Eugene S. Hunn, E. Thomas Morning Owl, Phillip E. Cash Cash, and Jennifer Karson Engum, *Ćáw Pavá Láakni – They Are Not Forgotten: Sahaptian Place Names Atlas of the Cayuse, Umatilla, and Walla Walla* (Pendleton, OR: Tamástslkt Cultural Institution, 2015); Jackie Gonzales and Morgen Young, *Overlanders in the Columbia River Gorge, 1840–1870: A Narrative History* (National Park Service (NPS) National Trails, 2020) 25, https://www.nps.gov/oreg/learn/historyculture/upload/HRA_Columbia_River_Narrative_History_Final_200917-reduced-size.pdf.

The primary southern route of the Oregon Trail in Idaho passed through what became Twin Falls. While many of the thousands of overlanders continued on to destinations in Oregon and California, others stayed, or returned to settle in the Twin Falls region. More people also came to Idaho Territory after gold was found in north Idaho in 1860. By 1870, prospectors had small operations searching for gold along the Snake River in the Twin Falls area. Homesteaders were attracted to free land available through U.S. government land grants; however, the arid landscape in the Twin Falls area delayed settlement in large numbers until irrigation projects changed the landscape in the early twentieth century. Between 1900 and 1910, people organized and platted the communities of Buhl, Filer, Hansen, Hollister, and Twin Falls, and established Twin Falls County.¹⁵¹

As the agricultural industry became well established, communities in the Magic Valley continued to grow. Population census records over time are not precise for this area because seasonal laborers are often not accounted for. By 1990, the Twin Falls County population was more than 53,792 and the city of Twin Falls more than 28,204. That number has increased over time, with 86,878 countywide and 50,197 in the city in 2019.¹⁵²

Economic Development of the Region

Population growth in the Twin Falls area came hand in hand with economic development. While mining and timber development were prevalent in other areas of Idaho, these industries were not dominant in the Magic Valley. Cattle and sheep ranching provided income for some, as ranchers drove herds through the area and established ranches near Twin Falls.¹⁵³

The agricultural industry became the dominant economic driver of the region. Like many arid areas, the development of regional agriculture was due in large part to reclamation efforts in the early twentieth century. Prior to this, some regional farmers had success with farming in and around the Snake River Canyon, but water was unreliable. Much changed following the federal passage of the Carey Act of 1894, wherein the government provided free land to settlers in arid areas after private investors built the necessary infrastructure to harness the water. The Twin Falls Land and Water Company formed in 1900 to build the Milner Dam and canal system, transforming the landscape. The dam and canals opened in 1905, and the area known as the Twin Falls Southside Irrigation tract was soon available for reliable water supply.¹⁵⁴ With arable soil and railroad infrastructure in place to ship goods, the agricultural industry had a strong foundation.

¹⁵¹ Barbara Perry Bauer and Elizabeth Jacox, “Historic Agricultural Resources of Twin Falls County, Idaho,” Multiple Property Documentation Form (Idaho State Historical Society, 2020) 7–8, 17; National Park Service, Oregon National Historic Trail Topographical Map, accessed December 4, 2020, <https://www.nps.gov/oreg/planyourvisit/maps.htm>.

¹⁵² United States Census Bureau, “Quick Facts, United States,” accessed December 4, 2020, <https://www.census.gov/quickfacts/fact/table/US/PST045219>.

¹⁵³ Bauer and Jacox, “Historic Agricultural Resources of Twin Falls County, Idaho,” 8–9.

¹⁵⁴ Paul Smith, “The History of Twin Falls,” accessed December 2, 2020, <https://www.tfid.org/Search?searchPhrase=history>.

Local crops and farming methods evolved over time. Successful crops in the Twin Falls area included fruits, vegetables, and grains. Among these, potatoes, sugar beets, beans, and corn were prevalent, with potatoes and sugar beets being the dominant crops. Farming methods evolved from horses and hand tools to plant and harvest manually, to mechanized equipment, including steam-powered threshing machines.¹⁵⁵

Keeping agricultural production high required more labor than was readily available. Mexican people, part of Idaho's labor force since the late nineteenth century after first coming north for trading and animal trapping, then working in fields and railroads, were recruited by large agricultural operations. (See Chapter 7 for more information on the Latino¹⁵⁶ population in Idaho.) The agricultural industry thrived during World War I with the aid of Mexican workers, recessed in the 1920s, then grew again in the 1930s after farm laborers from the Dust Bowl states arrived in the Twin Falls area.¹⁵⁷

The demand for adequate numbers of farm laborers to meet industry needs was an ongoing part of the early years of Twin Falls' development and continues in the twenty-first century.

Figure 1-1. A steam shovel digs the North Side Canal from Milner Dam, ca. 1906.
Twin Falls Public Library, Clarence E. Bisbee Collection, PC-2084.

¹⁵⁵ Bauer and Jacox "Historic Agricultural Resources of Twin Falls County, Idaho," 18–19.

¹⁵⁶ This context uses the term Latino rather than Latinx, following current practice of the Community Council of Idaho. Modern historical scholarship often uses the term Latinx in reference to people who live in the United States and have ancestral and cultural ties to Latin America. Latinx is an inclusive and gender-neutral term that replaces Latino and Latina.

2. Farm Security Administration

Overview of the Farm Security Administration

Resettlement Administration

Created by executive order in April 1935, the Resettlement Administration (RA) was one of many New Deal programs established to combat the Great Depression. It existed as a standalone agency outside of any federal department and focused on assistance to poor farmers impacted by the Depression. Among its charges were providing low-interest loans to farmers so that they could purchase better land, restoring farmlands to productivity through soil rebuilding and other conservation projects, and overseeing a range of resettlement programs. The latter included moving urban workers to rural communities, establishing communal farms for displaced rural families, and building camps for migrant farm laborers from the American Midwest and South.¹⁵⁸

Many of the RA's resettlement programs were denounced by conservatives as socialist experiments. To counter such opposition, RA director Rexford Tugwell created the Information Division in July 1935 to publicize the need for the agency's programs and their successes. The Historical Section, within the Information Division, consisted of a documentary photography program, directed by Roy Stryker and staffed by numerous photographers.¹⁵⁹

Farm Security Administration

Facing continuing attacks from conservatives for his supposed leftist ideology, Tugwell resigned in November 1936. The RA was absorbed into the U.S. Department of Agriculture the following year and renamed the Farm Security Administration (FSA). The FSA continued many of the efforts of the RA, as well as beginning new initiatives such as working with farmers' debtors to prevent farm and home foreclosures, introducing medical care programs to rural regions, and providing education about nutrition and hygiene to laborers. The programs were successful, with one study estimating that between 1937 and 1941, farm families participating in FSA-sponsored activities saw their incomes increase by 69 percent.¹⁶⁰

The FSA continued the migratory labor camp program created by its predecessor. Under the RA, the program had begun to provide emergency housing to individuals and families displaced by dust storms in the Midwest during the 1920s and 1930s. Many were tenant farmers, sharecroppers, and laborers. The FSA built and maintained two main types of camps: permanent, year-round camps and mobile, tent camps. Both types of camps provided housing, health care, educational opportunities for children and adults, and community recreational activities. By 1940, the FSA had constructed thirty-seven permanent labor camps, including one in Twin Falls. Collectively, these camps housed 35,000 people, approximately 7,500 families. The FSA constructed permanent camps in areas with high rates of agricultural employment. Each camp could house hundreds of people. Laborers in these camps either resided in barracks-style buildings, divided into apartments, or small houses. Permanent camps had facilities for health care, education, recreation, laundry, showers, and toilets. The FSA also operated mobile camps. Also known as camps on wheels, their locations changed depending on where agricultural work was needed. Laborers lived in canvas tents, set up on individual wooden platforms. Specially built trailers provided mobile camps with power and water. Each camp also had a laundry room, showers, toilets, an infirmary, community tent for recreation and religious services, and often a commissary. Some camps, either permanent or mobile, could house upwards of 1,000 people.¹⁶¹

Another program that continued from the RA to the FSA was the Historical Section. While it was initially intended as a minor effort by the RA, it became the most impactful activity of the FSA. When first appointed section director, Stryker ordered the program's photographers to document only rural life, such as farmers, laborers, land, crops, and machinery. These images were meant to bring attention to those people in need of agency assistance and document agency accomplishments in rural rehabilitation and resettlement. But within a few years, both Stryker and his staff became interested in photographing all aspects of American life. Appearing in popular magazines and other publications, the photographs of the Historical Section helped create the image of the Great Depression in the United States. In September 1942, the photography program transferred to the Office of War Information, and Stryker and staff became part of broader wartime propaganda efforts. Between 1935 and 1944, the photography program produced approximately 175,000 black-and-white film negatives and 1,600 color photographs.¹⁶²

Evolving Role

The onset of World War II led to changes for the FSA. The agency played a significant role in the forced removal and incarceration of Japanese Americans. As the federal government began the

mass removal of 110,000 people of Japanese ancestry from the West Coast in March 1942, the FSA worked to ensure that agricultural production would continue in California, Oregon, Washington, and Arizona. FSA personnel oversaw the purchase or rental of Japanese American-operated farms by primarily white operators. Nearly half of the Japanese American working population forcibly removed had been engaged in agriculture.¹⁶³

The forced removal contributed to a worsening agricultural labor shortage in the United States. Much of the farm workforce from 1941 had departed for wartime industrial jobs or military service. Leaders of the sugar beet industry in western states led demands to the federal government for replacement labor sources. At the start of the war, sugar was recognized as a vital commodity. In addition to food use, sugar beets were converted into industrial alcohol and used in the manufacturing of munitions and synthetic rubber. Due to the war with Japan, the United States was no longer importing sugar from the Philippines or Java, as both were now under Japanese occupation. In response, American farmers increased their sugar beet acreage by 25 percent. By the spring of 1942, thousands of workers were needed to cultivate the labor-intensive crop. Sugar companies, farmers, and state and local officials all submitted requests to the War Relocation Authority (WRA), the federal agency in charge of the incarcerated Japanese Americans, to utilize these individuals as a labor source. The WRA ultimately agreed and allowed hundreds of Japanese Americans to move from the Portland Assembly Center in Portland, Oregon, to an FSA mobile camp site in Nyssa, Oregon, in May 1942 to work in the region's sugar beet fields.¹⁶⁴

The establishment of the first Japanese American farm labor camp during the war marked another change in the FSA's duties. Prior to the war, the FSA, through its migratory farm labor camps, had provided housing and health services to migrant farm labor families. The national labor shortage led the FSA to utilize its permanent and mobile camps as housing for a range of workers. These included Japanese Americans recruited from temporary assembly centers and concentration camps; Mexican, Jamaican, and Bahamian laborers imported through agreements with their respective governments; and German and Italian prisoners of war. In 1943, the War Food Administration (WFA), a newly established federal agency, overtook all FSA farm labor activities, including operation of the camps. When World War II ended, the WFA folded and sold many of the labor camps. The FSA, meanwhile, consolidated with the Emergency Crop and Feed Loan Division of the Farm Credit Administration to become the Farmers Home Administration in 1946.¹⁶⁵

The FSA in Idaho

The FSA's administrative structure had six levels: headquarters in Washington, DC; twelve regional offices; state offices in most states; district offices within states; county offices in most counties; and a project office for each project, including migratory labor camps. Region XI, headquartered in Portland, oversaw FSA activities in Alaska, Idaho, Oregon, and Washington.¹⁶⁶

The FSA built two permanent camps in Idaho: Caldwell in 1938 and Twin Falls in 1939 (See Chapter 3 for more information on both camps). The Caldwell camp also stored equipment for all FSA mobile camps in the state. In 1942, that equipment included 681 tents, 878 tent platforms, 100 privies, and 2 clinic trailers. The locations of the mobile camps changed depending on where agricultural labor was needed. In 1942, mobile camps were located in Blackfoot, Jerome, Nampa, Paul, Rexburg, Shelley, and Wilder. In June 1942, the FSA overtook operation of a former Civilian Conservation Corps camp in Rupert. Known as both Camp Paul and Camp Rupert, the Bureau of Reclamation had maintained the site from July 1939 to May 1942.¹⁶⁷

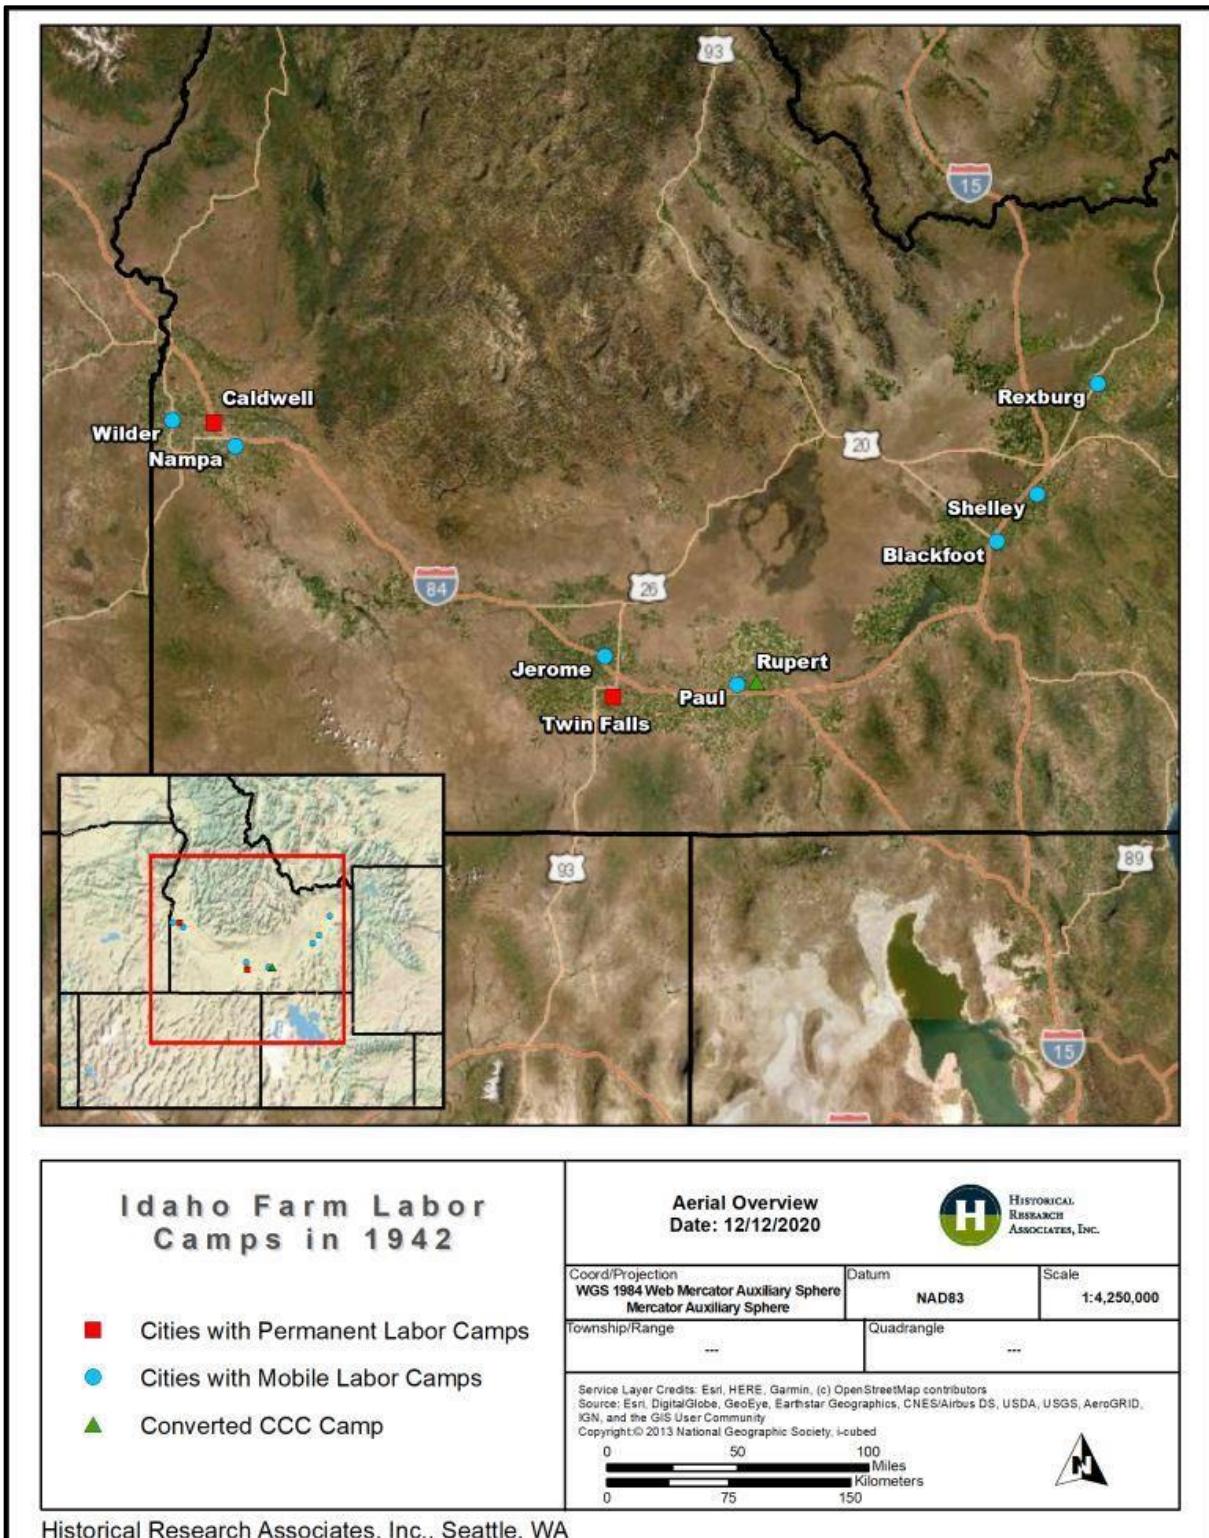

Figure 2-2. Locations of FSA farm labor camps in Idaho in 1942.

The FSA's Historical Section captured some twelve hundred photographs of Idaho. Russell Lee produced nearly 80 percent of these images during various trips to the state between 1940 and 1942. He was the most prolific of all FSA photographers, taking more than five thousand images during his seven-year career with the agency. When the United States entered the war, Lee was working in California. In April 1942, he began documenting the forced removal and incarceration of Japanese Americans for the FSA, eventually capturing nearly six hundred images. Lee photographed families making final preparations at their homes, farms, and businesses before their removal. He documented people at train stations waiting to be transported to the Santa Anita Assembly Center. He also shot images of the Salinas Assembly Center. That summer, Lee took photographs of four FSA camps that were primarily occupied by Japanese Americans—Nyssa in Oregon, and Twin Falls, Rupert, and Shelley in Idaho. The previous year, Lee had documented the FSA camps in Caldwell and Wilder. His twenty-nine images of the Twin Falls camp provide the best historic documentation of the site and its occupants (See Chapters 3 and 6 for additional images).¹⁶⁸

3. The Twin Falls Migratory Farm Labor Camp: 1939–1946

Development

The Farm Security Administration (FSA) oversaw construction of the Twin Falls Migratory Farm Labor Camp in 1939. It was one of two such camps built by the federal agency in Idaho, with the other located in Caldwell. Its original purpose was to provide housing to farmers and their families displaced by dust storms in the Midwest during the Great Depression. With the onset of World War II and the subsequent agricultural labor shortage, the purpose of the camp changed. The FSA began housing a diverse group of farm workers in the camp, including Japanese Americans, Mexicans, and Jamaicans.¹⁶⁹

The potential of a federal farm labor camp being built in Twin Falls was first reported in late March 1939. During a Twin Falls city council meeting, a city clerk informed the council that he had been contacted by an FSA engineer regarding use of water for a project. The same clerk also reported that the FSA engineer had reached out to Idaho Power Company about bringing power to the project site. Grace and J. H. Seaver shared during the meeting that they had been approached by the federal agency regarding acquisition of their orchard, located two miles south of the city of Twin Falls.¹⁷⁰

On May 4, 1939, Grace Seaver sold sixty acres in Section 29, Township 10 South, Range 17 East to the Department of Agriculture for \$9,500. Later that month, the FSA requested bids to build twenty-five houses, two hundred wooden shelters, and other supporting structures. The agency eventually issued a \$229,048 contract to R. Goold & Son of Stockton, California. Construction ran from July to December 1939. Anticipating more housing would be needed, the FSA issued a second request for bids in March 1940. Dolan and Buck, also of Stockton, won with a \$56,091 bid to construct additional houses and other ancillary buildings.¹⁷¹

Architect Burton D. Cairns designed the buildings, and Garrett Eckbo designed the landscape architecture for the Twin Falls camp. Both worked for Region IX of the FSA in San Francisco, along with district engineer Herbert Hallsteen and regional engineer Nicholas Cirino. Cairns and Eckbo were involved in an automobile accident in Tigard, Oregon, on December 15, 1939. Cairns, the driver, died instantly and Eckbo sustained serious injuries. Eckbo continued to work for the FSA

until 1942. Vernon DeMars replaced Cairns as district architect. The Twin Falls camp may have been one of the last FSA projects designed by Cairns.¹⁷²

Figure 3-2. Identification of Twin Falls Labor Camp buildings in 1946.

Located two miles south of Twin Falls, at 1122 Washington Street South, the main street, Labor Camp Road, was designed in a U-shape and provided two access points to the camp. It was originally unpaved. Upon completion of the first phase of construction, in late 1939, the camp consisted of twenty-four farm labor houses, thirty-six barracks-style buildings, a manager's house, a community building, a central utility building with showers and laundry, three comfort stations with toilets and wash basins, a health clinic (called the "isolation ward"), a water storage and supply system, a sewage system, a gatehouse, and recreational facilities, including a baseball field and two basketball courts. The community building provided space for an auditorium, mess hall, school, and nursery. The FSA completed a second phase of construction in the spring of 1940, building twenty-three additional farm labor houses, twenty-three tool sheds, several garages for the houses, and other facilities.¹⁷³

Figure 3-3. FSA photographer Russell Lee took a series of images of the Twin Falls Migratory Farm Labor Camp in July 1942. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073766-D.*

Duffy, Regional Director, FSA, Portland to Major W. W. Williver, Executive Director, Washington State Defense Council, Seattle, February 23, 1942; Folder: 505 Relocation Alien July 1941 to June 1942; Box 7; Entry 123: Office of the Director, Correspondence; Record Group 96: Farm Security Administration; National Archives & Records Administration, Seattle, WA; Jean Dinkelacker, "Complete Farm Labor 'City' Taking Rapid Form: Varied Dwelling Facilities Mark \$229,048 Camp," *Idaho Evening Times*, December 8, 1939.

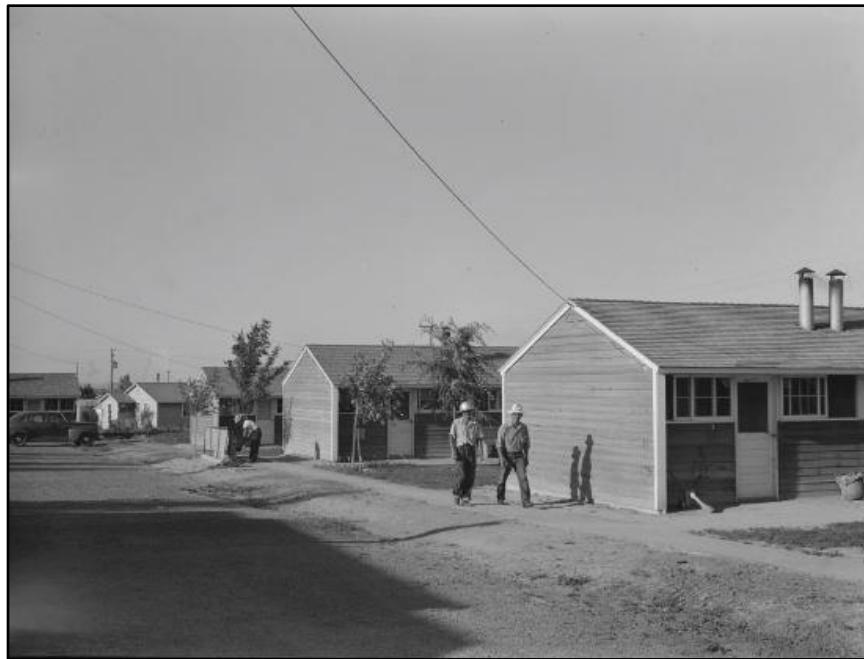

Figure 3-4. The camp, photographed in 1942, included two types of housing—barracks-style buildings and small houses. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073771-D*.

Figure 3-5. The camp had forty-seven small houses or cottages. Each house had a kitchen, living/dining room, two bedrooms, and a bathroom. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073761-D*.

Each farm labor house included a combined living and dining room, kitchen, two bedrooms, a bathroom, laundry facility, running water, and electricity. Each house was identical in design, with the living/dining room and kitchen in the front of the house and the bedrooms and bathroom in the back. The only plan variation was the location of the kitchen on either the right or left side of the living/dining room. The houses were painted a variety of colors, including buff, sand, light yellow, and gray-green, all trimmed in white. Each house had a front lawn and small garden plot in the backyard. This type of housing was typically reserved for families who lived and worked in the Twin Falls area year-round.¹⁷⁴

Figure 3-6. There were thirty-six barracks style buildings in the camp. Each building was divided into six apartments. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073774.*

The camp had six rows of six barracks-style buildings, or row shelters. The shelters were clad in California redwood board siding and had side-gabled roofs topped with cedar shingles. Each building was divided into six apartments, which could house up to four people per unit. Every apartment had an exterior entrance, with a screened door. The row shelters were centrally located in the camp. They lacked running water, so residents used laundry and shower facilities in a separate building. Comfort stations, situated between the buildings, contained toilets and wash basins. The row shelters typically housed seasonal workers. Due to the lack of running water and insufficient insulation, the FSA closed the buildings after harvest season in the fall and opened them again during planting season in the spring.¹⁷⁵

Occupants and Lifestyle

By June 1940, forty-one families were living at the Twin Falls Migratory Labor Camp. They were, presumably, all white families. James Tanaka, who lived at the camp from 1943 to 1949, recalled these families as originating primarily from Arkansas and Oklahoma. However, most migrant farmers living in the Northwest arrived from Missouri, Kansas, North Dakota, and South Dakota.¹⁷⁶

Figure 3-11. Camp residents play Go, a Japanese board game, in 1942. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073765-D.*

Japanese American farm workers first moved into the camp in June 1942 (See Chapter 6 for more information on Japanese Americans). They arrived as part of a broad effort, executed by federal, state, and local government officials, as well as private interests, to address a national agricultural labor shortage. By the mid-1940s, a diverse group of people provided farm labor in Idaho, including white migrants from the Midwest and South, Japanese Americans, Native Americans, Mexicans through the federal Bracero Program (See Chapter 7 for more information on Latino laborers), Jamaicans, German and Italian prisoners of war, conscientious objectors, and local men, women, and children. The make-up of residents at the Twin Falls camp reflected this

¹⁷⁶ Letter from J. O. Walker, Director, Resettlement Division, FSA, Washington, D.C. to Walter A. Duffy, Regional Director, Region XI, Portland, July 15, 1940; Folder: 913-Attitude Toward Project; Box 12; Entry 123: Office of the Director, Correspondence; Record Group 96: Farm Security Administration; National Archives & Records Administration, Seattle, WA; Morgen Young Interview with James K. Tanaka, Los Angeles, CA, April 18, 2014, <http://www.uprootedexhibit.com/their-stories/#/?profile=221>.

diversifying of Idaho's labor force. In October 1943, camp residents included 250 Japanese Americans, 175 whites, 100 Mexicans, and 50 Jamaicans.¹⁷⁷

Japanese Americans who lived in the camp in the 1940s resided in either apartments in the barrack-style buildings or small, single-family homes. Typically, single individuals, mostly men, resided in the apartments, with two to four people per unit. Seasonal laborers utilized the barracks, as the buildings were not suitable for winter occupation. Families lived year-round in the houses.¹⁷⁸

A September 1942 article in the *Minidoka Irrigator*, a weekly newspaper published at the Minidoka concentration camp, located approximately twenty-two miles northeast of Twin Falls, described the camp as follows:

Residents live in barracks which have been divided into one-room quarters, 14 by 16 feet, with cement floors. Steel double-deck beds, two pairs to each room, are furnished. The camp also supplies a metal utility table and two folding chairs. A small wood-burning kitchen stove for heating and cooking is placed in each living unit. The camp is supplied adequately with both cold and hot running water, a huge laundry room, clean, modern toilets and showers. In addition, there is a spacious recreation hall and a library. An up-to-date clinic with a trained nurse also is available for FSA residents. It stands as a separate unit near the entrance of the well-landscaped environment.¹⁷⁹

Figure 3-12. Beginning in 1942, the Twin Falls labor camp was occupied primarily by single Japanese American men. As the War Relocation Authority began to encourage family unit resettlement away from the concentration camps, an increasing number of Japanese American families began to reside in the camp.

James Kazuo Tanaka arrived at the Twin Falls camp in the spring of 1943, at the age of eight. He moved with his parents, James Kenso and Toshiko Tanaka, from Minidoka. His father had harvested sugar beets that previous autumn and lived at the Twin Falls camp. The entire family participated in the 1943 and 1944 sugar beet harvest seasons, residing in barracks at the Twin Falls camp between the summer and autumn, and returning to Minidoka in the winter months. Upon securing permanent farm work in early 1945, the Tanaka family moved into one of the houses at the labor camp. They remained there until 1949 and eventually settled in Los Angeles.¹⁸⁰

When he first moved to the camp, James met other Japanese Americans, including families and individuals. He also met white migratory laborers from the Midwest, who he described as members of the camp's more permanent population. These laborers had likely lived in the camp since before the war. He briefly attended school in the camp's community building before starting classes at Bickel Elementary School in Twin Falls.¹⁸¹

During a 2014 oral history, James shared some of his memories of the camp:

The farm labor camp had total freedom. There were some agricultural fences around, but you could crawl between or under or over them and go pretty much anywhere ... We were able to go into town. My main reason for going into town, other than purchasing clothes, was my Saturday matinee movies for a quarter. Usually a cowboy western, with a short serial, so you'd have to go back next week to see the next part of the serial...I'd either hitchhike or when I got a bicycle, I could ride into town.¹⁸²

Prior to the end of the incarceration of Japanese Americans by the federal government, in early 1945, Japanese American residents in the Twin Falls camp were permitted to visit the city of Twin Falls, but only with supervision from either FSA personnel or local police. Though there was no barbed wire nor guard towers like Minidoka and other concentration camps, the Twin Falls camp, as with other farm labor camps, was still a site of confinement for Japanese Americans. During the war, camps had curfews and no Japanese Americans were allowed to leave the premises without escort from camp personnel, local authorities, or their employers.¹⁸³

There was at least one known instance of violence against Japanese Americans living in the Twin Falls camp. In July 1944, the *Manzanar Free Press* reported that five white teenagers from the nearby town of Buhl attacked a group of Japanese Americans in Twin Falls. The incident was condemned by local authorities. In response to the attacks, sixty Japanese Americans from the Twin Falls camp

Comparison to Other Farm Labor Camps

The FSA built and maintained two types of farm labor camps—permanent, or year-round, camps and mobile, or tent, camps (See Chapter 2 for more information on the FSA in Idaho). Burton D. Cairns, Garrett Eckbo, and other staff at the Region IX FSA office in San Francisco designed two permanent camps in Idaho—Twin Falls and Caldwell. The San Francisco office also designed permanent camps in Arvin, Brawley, Ceres, Coachella, Firebaugh, Gridley, Marysville, Mineral King, Shafter, Thornton, Tulare, Westley, Winters, and Yuba City, California; Yamhill,

¹⁸⁴ “Idaho Seasonal Workers Beaten by Buhl Youth at Twin Falls,” *Manzanar Free Press*, July 8, 1944.

Oregon; Granger, Walla Walla, and Yakima, Washington; Agua Fria, Baxter, Casa Grande, Chandler, Eleven-Mile Corner, Glendale, and Yuma, Arizona; and Harlingen, Robstown, Sinton, and Weslaco, Texas.¹⁸⁵ As the only other permanent FSA camp in Idaho, the Caldwell camp provides the best direct comparison to the Twin Falls camp.¹⁸⁶

The FSA built a camp in Caldwell in 1938. Like Twin Falls, it was built originally to house primarily white farmers displaced by the Dust Bowl. By the early 1940s, the camp also housed Jamaican, Japanese American, and Mexican laborers.¹⁸⁷

Figure 3-17. The small houses at the Caldwell camp, photographed in 1941, were similar in style to those at the Twin Falls camp. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF33-013032-M4.*

Like the Twin Falls camp, the Caldwell camp included small houses and barracks-style buildings. The exterior of these buildings appear to have been identical to those at the Twin Falls camp.¹⁸⁸ The Caldwell houses were identical, each containing a kitchen, living room, bathroom, and two bedrooms. They were also furnished, with beds, tables, chairs, and couches. Every house had a small lawn, garden patch, and garage space. Only families were allowed to live in the houses.¹⁸⁹

¹⁸⁵ Treib and Imbert, *Garrett Eckbo*, 121–22. HRA cannot confirm how many, if any, Region XI FSA camps are extant.

¹⁸⁶ HRA acknowledges there were other permanent or semi-permanent camps administered by the FSA in Idaho, including Burley and Rupert. However, as these camps only had barracks-style buildings and did not also contain small, cottage-like houses, HRA does not consider them as comparable to the Twin Falls camp as Caldwell. It appears that all buildings from the former Rupert camp have been removed. Available information on the present physical status of the former Burley camp was inconclusive. “Historical Marker Placed at WWII POW Camp Rupert,” *Times-News*, August 31, 2012, updated March 20, 2013, https://magicvalley.com/news/local/historical-marker-placed-at-wwii-pow-camp-rupert/article_ca518126-6807-539c-bc9b-af8327ead5a4.html.

¹⁸⁷ DeYoung, *Japanese Resettlement in the Boise Valley and Snake River Valley*, 15.

¹⁸⁸ HRA reviewed photographs of buildings at each location. Construction drawings were not available for comparison.

¹⁸⁹ DeYoung, *Japanese Resettlement in the Boise Valley and Snake River Valley*, 16–17.

Figure 3-18. The barracks-style buildings at the Caldwell camp, 1941. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF33-013043-M3*.

The barracks-style buildings were divided into six apartments each. Each apartment included beds, table, chairs, shelves, and a stove for cooking and heating. The buildings lacked running water. A separate building housed showers and laundry facilities, and comfort stations between the barracks contained toilets and wash basins. These buildings were meant to house seasonal workers and were not occupied during the winter.¹⁹⁰

Figure 3-20. The barracks-style buildings at the Twin Falls camp, pictured in 1942, are nearly identical to those at the Caldwell camp. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073767-D.*

The camp maintained a small commissary, which sold items such as milk, meat, and other groceries to camp residents. The camp's community building served multiple functions, including movie theater, mess hall, and school. In 1946, the camp school included Japanese American, Mexican, Black, and white students. High school-aged students attended a local high school.¹⁹¹

During the late 1930s and early 1940s, the Caldwell camp stored equipment for all mobile FSA camps in Idaho. This included tents, wooden tent platforms, privies, and health clinic trailers. The exact locations of the mobile camps changed every year, as the FSA located laborers where they were most needed.¹⁹²

The War Food Administration (WFA) overtook administration of the Caldwell camp, along with all other FSA labor camps, in 1943. After the end of World War II, the federal government dissolved the WFA and sold many of the farm labor camps. The Caldwell Housing Authority acquired the camp in 1950. Now known as Farmway Village, the site continues to house agricultural laborers. Many are Mexicans, working in Canyon County through the H-2A temporary agricultural visa program.¹⁹³

4. The Twin Falls Migratory Farm Labor Camp: 1947–1987

Twin Falls County Farm Labor Sponsoring Association, Inc.

When World War II ended, the U.S. government ended all operations of the War Food Administration (WFA). Subsequently, many of the labor camps then operated by the WFA were relinquished to organizations wishing to operate them. In July 1947, Darrell H. Moss, director of the Twin Falls Migratory Farm Labor camp, announced that the federal labor program was ending and that all camp tenants would have to leave by September 25 of that year. This included approximately 500 White, Japanese American, and Mexican residents.¹⁹⁴

As agricultural laborers were still needed in the Twin Falls area through the end of the harvest season that year, the federal government and local interests struck a deal. The U.S. Extension Service, Amalgamated Sugar Company, and Twin Falls County Farm Labor Sponsoring Association agreed to continue to operate the camp and place laborers where they were most needed through November 30, 1947.¹⁹⁵

Amalgamated Sugar Company was only involved in operations for a short time, as soon the Twin Falls County Farm Labor Sponsoring Association acquired the camp.¹⁹⁶ The Association was one of five such groups established in Southern Idaho in 1943. Their role was to ensure farm owners were responsible for their own harvests and had obligations in obtaining labor to complete the harvest. They were cooperative organizations that farm owners paid fees to join. Membership money paid for the workers' food and lodging. (Rental fees paid by laborers were supposed to pay for camp maintenance.) The Twin Falls County Farm Labor Sponsoring Association oversaw the camp's maintenance and operation for the next forty years.¹⁹⁷

¹⁹⁴ Bauer and Jacox, "Twin Falls Migratory Farm Labor Camp," 83-15919, 3; "Farm Labor Camp Will Serve Area Through Harvest," *Times-News*, July 18, 1947, <http://www.twinfofallspubliclibrary.org/newspaper/publication/TN>; "New Law Brightens Labor Camp Future," *Times-News*, July 24, 1947, <http://www.twinfofallspubliclibrary.org/newspaper/publication/TN>; "Tenants Ordered to Vacate Camp," *Post-Register*, July 10, 1947.

¹⁹⁵ "Tenants Ordered to Vacate Camp"; "Farm Labor Camp Will Serve Area Through Harvest"; "New Law Brightens Labor Camp Future," 1.

¹⁹⁶ It appears that the initial three-way agreement transferring ownership from the federal government to Amalgamated Sugar and Twin Falls County Farm Labor Sponsoring Association did not involve a purchase. It is likely the Twin Falls County Farm Labor Association assumed ownership and operation without purchase. "New Law Brightens Labor Camp Future."

Elcock, "Farmer Sponsored Labor in Idaho, 1943," in *Proceedings of the Eastern Slope and Intermountain Regional Meeting*, American Society of Sugar Beet Technologists, 1944, <https://bsdf-assbt.org/wp->

Figure 4-1. Excerpt from the *Twin Falls Times-News* detailing planned closure of the camp in 1947. *Twin Falls Times-News*, July 18, 1947.

Physical Description

When the Twin Falls County Farm Labor Sponsoring Association took over ownership, the campus included the original thirty-six barracks-style buildings and forty-eight farm labor houses. The latter included the original forty-seven houses plus the building that originally served as the camp manager's house. The Association rented the apartments in the barracks-style buildings for \$1.40 per family unit, per week. The camp had 216 total apartments, six per building, with a total capacity of 864 people. The Association rented the farm labor houses for \$3.55 per week. Allowing for four people per home, the single-family houses had a capacity of 192.¹⁹⁸

Occupants of the camp fluctuated each year. By 1961, some of the barracks-style buildings were no longer housing laborers. The camp's capacity had declined from 1,056 to 831. All of the single-family houses were extant, but a state report from that year stated that only ten out of the original thirty-six barracks-style buildings were used as residences. In 1965, the Twin Falls Camp was the

content/uploads/2018/01/FarmerSponsoredLaborinSouthernIdaho1943.pdf; "Farm Labor Camp Will Serve Area Through Harvest"; "Tenants Ordered to Vacate Camp."

¹⁹⁸ "Farm Labor Camp Will Serve Area Through Harvest."

largest of seventy-three camps in southern Idaho, housing 1,210 of the approximately 10,000 migrant workers in the region. By 1976, capacity had declined to 400. At that time, rent ranged from \$14 to \$20 per week.¹⁹⁹

Reports and remembrances indicate that the camp's physical conditions deteriorated in the 1970s and 1980s. In 1976, camp improvements included some electrical rewiring, roof repair, and work in the bath facilities. Twin Falls community member Sister RoseMary Boessen recalled the camp being beautiful in the 1970s, then falling into disrepair in the 1980s. Though topographical maps indicate twenty-two of the barracks-style buildings were removed by 1979, subsequent historic resources surveys reflect that all but seven of the original barracks-style buildings remained in place.²⁰⁰

Quadrangle Maps, 1979.

Occupants and Lifestyle

People living at the camp from the 1950s through the 1980s were primarily Mexicans and Mexican Americans. Individuals and families living there were typically seasonal laborers. They would move between Idaho camps, and often go out of state, following crop harvests or visiting family in other places between harvests.²⁰¹

The physical conditions and services at the camp deteriorated over the years. The Twin Falls County Farm Labor Sponsoring Association's funding stream, made up of local farmers' membership dues, proved to be insufficient. They could not cover many of the services that the Farm Security Administration and the WFA had provided to camp residents when the camp was under their ownership. These included health care and education. Such services eventually stopped. The safety and cleanliness of the camp depended largely upon individual camp managers. Local organizations, churches, and other concerned individuals offered to assist the Association in the care of the camp and its residents. Such offers were often declined by management.²⁰²

In the 1970s, people created resources at the camp to better serve the children living there. Many seasonal farm laborers were forced to bring their young children with them to work for lack of a safe place to leave them. This led local religious groups to partner with the Twin Falls Young

²⁰¹ For more on seasonal workers traveling between labor sites and housing, see Jim Norris, *North for the Harvest: Mexican Workers, Growers, and the Sugar Beet Industry* (St. Paul: Minnesota Historical Society Press, 2009).

²⁰² Bauer and Jacox, "Twin Falls Migratory Farm Labor Camp," 83-15919, 3.

Women's Christian Association (YWCA) in 1970 to establish a daycare center at the camp. A combined library and recreation center within the complex was present by 1971. Children could play and read there, supervised by community volunteers and employees of the YWCA. In 1975, the Idaho Migrant Council, an advocacy organization for migrant laborers in Idaho, requested \$31,000 from the Twin Falls County commissioners to develop recreation facilities at the camp. It is unknown if any of that requested was funded.²⁰³

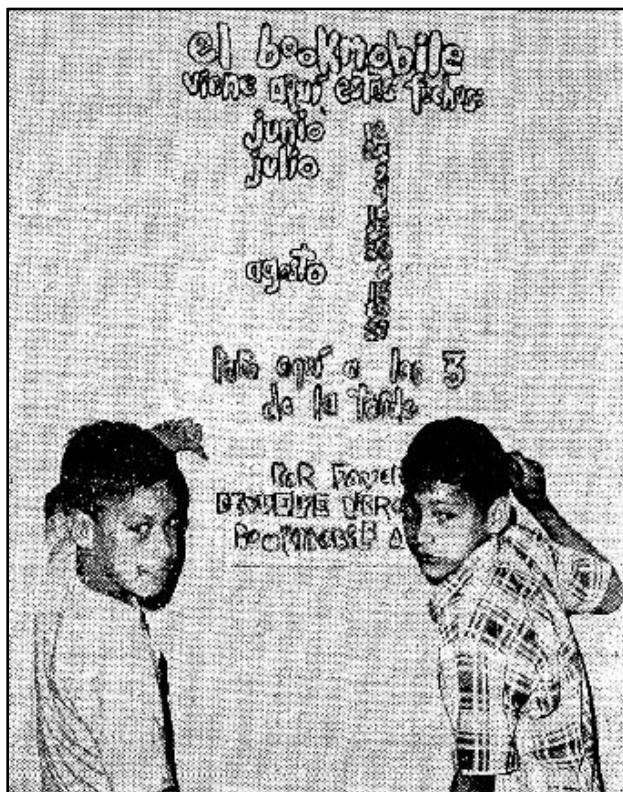

Figure 4-6. Children writing the schedule of the Magic Valley Bookmobile, which visited the camp weekly, in 1971. *Idaho Statesman*, July 12, 1971.

Also in 1975, the Department of Housing and Urban Development opened an investigation of racial discrimination at the camp. Residents reported unequal treatment and harassment against Mexicans and Mexican Americans from the camp manager. The Idaho Migrant Council was aware of the investigation and sought better treatment for the camp residents. Later that year, Comunidad Voluntaria Mexicana, a Chicago-based farm labor organization, staged a march through downtown Twin Falls. They protested the unsanitary conditions at the camp, as well as the discriminatory practices. It is unclear what came of the investigation, though physical improvements in the spring of 1976 may have been related.²⁰⁴

5. The Twin Falls Migratory Farm Labor Camp-El Milagro: 1988–2018

Idaho Migrant Council (Community Council of Idaho)

By the late twentieth century, the Twin Falls County Farm Labor Sponsoring Association's membership was in decline, and the need for migrant laborers had evolved. No longer able to maintain the camp, the Association sold it to the Idaho Migrant Council, Inc., for \$135,000 in 1988. Humberto Fuentes founded the non-profit Idaho Migrant Council in 1971 to provide housing and other services, as well as to serve as an advocacy organization to migrant laborers in the state.²⁰⁵

In 1990, the Idaho Migrant Council changed the name of the camp from the Twin Falls Migratory Farm Labor Camp to El Milagro, or The Miracle, Housing Project. The council underwent a name change in 2006, becoming the Community Council of Idaho.²⁰⁶

Today, the Community Council of Idaho is the largest nonprofit serving the Latino population in Idaho (see Chapter 7 for more information on the Latino community in Idaho). In addition to operating five multi-family housing complexes, the council conducts employment and training programs, and operates ten Migrant and Seasonal Head Start centers in southern Idaho and three health centers in eastern Idaho.²⁰⁷

Physical Description

Significant renovations and upgrades to the camp's infrastructure and housing occurred in the 1990s. Darrel McRoberts, plant manager of the Green Giant packing plant in Buhl, spoke of the "perennial housing shortage" for seasonal laborers.²⁰⁸ He described how many temporary workers in the area would finish a harvest and look to secure housing for the next harvest before heading out of town for short vacations. He noted that if there was no suitable housing available, they might not return. To address this need for sufficient housing, in 1990, Green Giant, one of the main employers of El Milagro residents, provided \$15,000 in funding to rehabilitate buildings on the campus.²⁰⁹

²⁰⁹ Pat Marcantonio, "Gradually, a miracle reshapes El Milagro," *Times-News*, September 1, 1996; Smith, "Migrants face another housing shortage."

More improvements were soon to come. Also in 1990, the Idaho State Department of Commerce awarded the City of Twin Falls an Idaho Community Development Block Grant to make improvements at the complex. This grant, combined with financial contributions from the City and the Idaho Housing Agency, netted \$637,418 that funded upgrades completed by 1992. These included installation of a sewer trunk line and a main water line, improving water pressure and providing pressure for fire suppression, remodeling of most of the single-family houses, remodeling of one barrack into a two-bedroom duplex for homeless families, and remodeling six barracks into twenty-four studio apartments. In 1999, the Migrant Council received a \$61,000 grant from the U.S. Department of Agriculture's Rural Development project to make twenty-four units at El Milagro accessible.²¹⁰

Newspaper coverage of camp changes in the 1990s, including street paving due to a \$1 million block grant, indicate that in 1996, 428 residents lived in 101 houses and apartments. At that time, rent varied from \$175 to \$319 per month for a three-bedroom apartment.²¹¹

Renovations to the buildings have continued over time. In 2012, mentorship program YouthBuild El Milagro began renovating housing units on the campus. By 2015, residency at El Milagro dropped to 281 people, with eighty-four families among them. Of those families, seventeen were farmworker families.²¹²

²¹⁰ Gregory Harbor, "Migrant Council gets grant to improve accessibility of duplex," *Times-News*, October 12, 1999:2, , <http://www.twinfallspubliclibrary.org/newspaper/publication/TN>; "Major Improvements Being Made to Old Labor Camp."

Figure 5-1. Landscape improvements at El Milagro, ca. 2018. *Community Council of Idaho, 2018 Annual Report*.

As of 2019, forty-five of the original forty-seven farm labor houses remained in the camp. Most had been altered but still retained their original footprints. None maintained their original stovepipes but instead had modern roof vents. Nearly none of the secondary structures associated with the houses, such as garages, tool sheds, and clothes lines, remained. Some houses had their original picket fences. Most had modern additions, including television antennae, satellite dishes, and storage sheds.²¹³

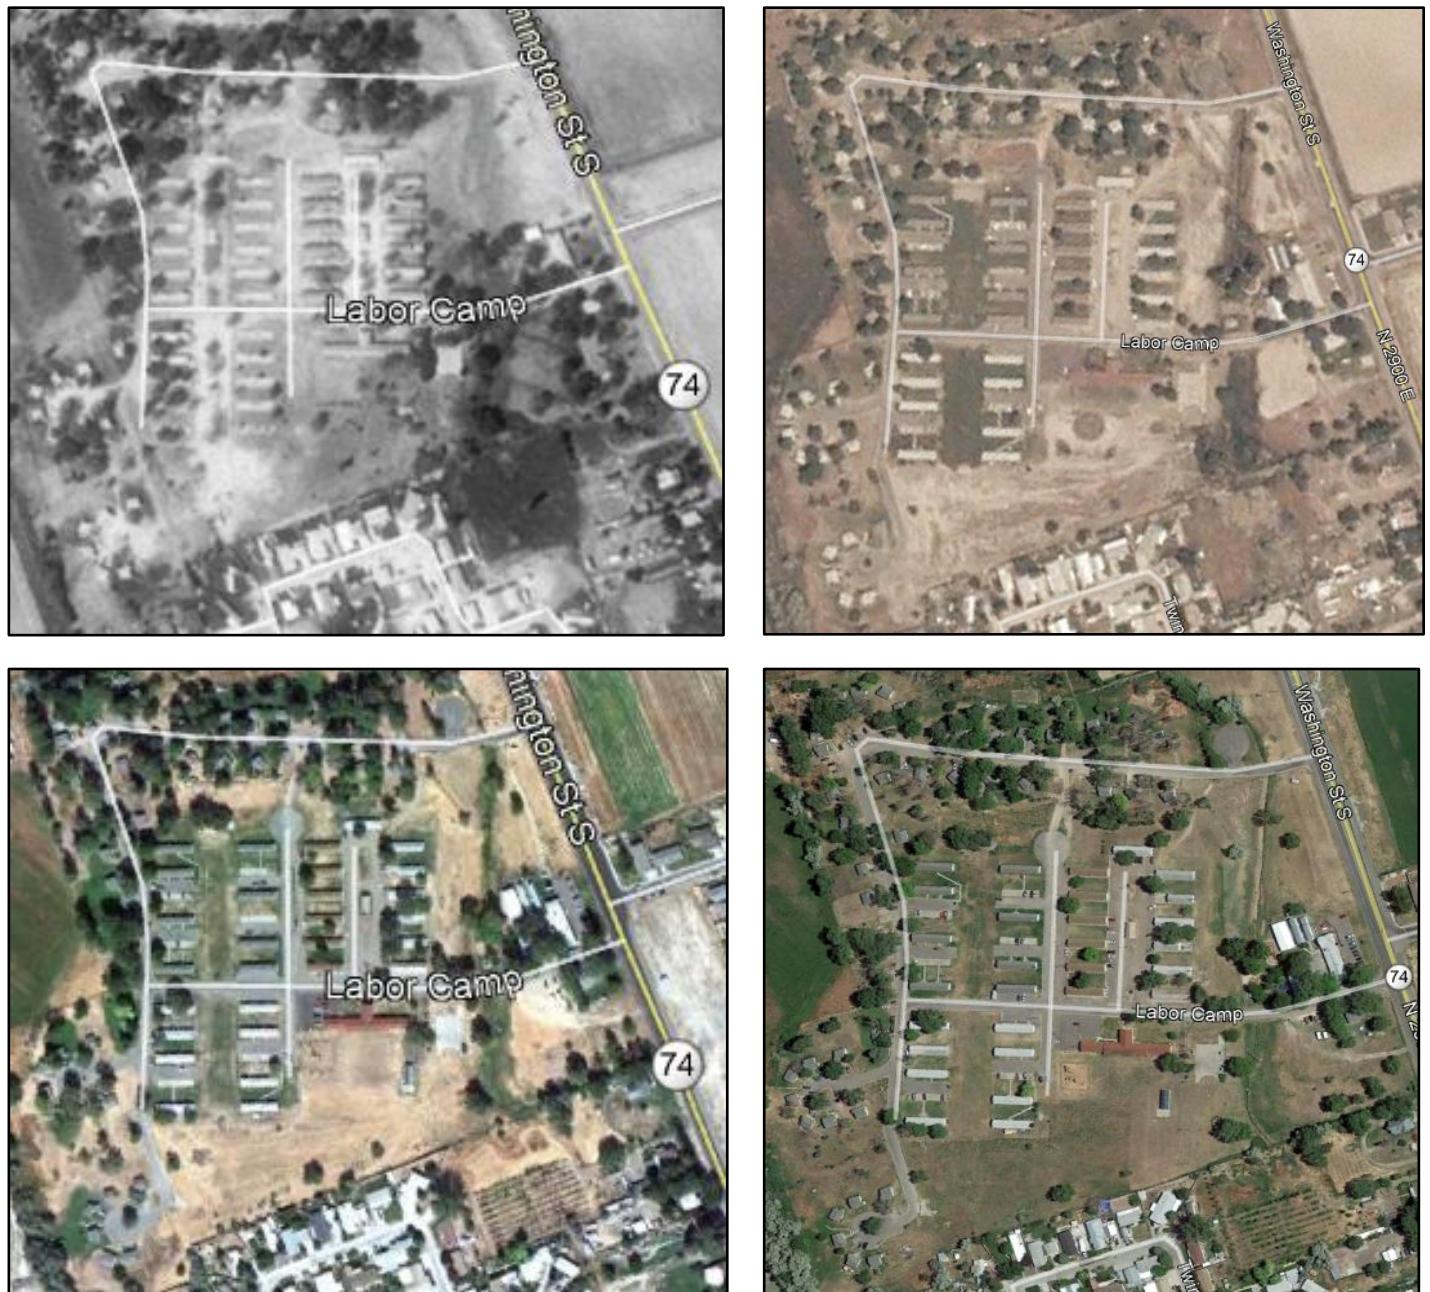

Twenty-nine of the original thirty-six barracks-style buildings were extant, with twenty-seven still used for housing. Of these structures, some were single-family homes, some duplexes, and others four-plex units.²¹⁴

The original gatehouse had been altered into a building for the Felipe Cabral Migrant and Seasonal Head Start program. The utility building, which once housed showers and laundry facilities, had been converted into an office for El Milagro Housing. A public meeting area and concrete basketball court now stand on the foundation of the original community building.²¹⁵

Occupants and Lifestyle

The makeup of residents of the former camp shifted overtime, as the camp became a housing complex for low-income individuals who were not necessarily connected to agricultural work. While some seasonal laborers still lived here, by 1996, manager Rudy Rodriguez said that more than 90 percent of residents stayed year-round. They attributed this to changes in the agricultural industry creating fewer jobs in the fields. El Milagro now sheltered low-income families and homeless single people, and provided emergency temporary housing, in addition to housing temporary workers. In 1999, the requirement to qualify for housing at El Milagro was earning less than the area's median income and making at least 30 percent of that from agriculture. In recent years, there has been no agricultural restriction on tenants' income.²¹⁶

Changes also came to the complex as the buildings were physically upgraded. Long-time resident Josefina Valenzuela reported in 1996 that in her twenty-one years living there, she witnessed the "squalor" turn into what the *Times-News* paraphrased as "a cleaner neighborhood of flowers and *familia*."²¹⁷

Figure 5-6. Josefina Valenzuela, making tortillas in her kitchen at El Milagro.

²¹⁷ Marcantonio, "Gradually, a miracle reshapes El Milagro."

Figure 5-7. Former farm laborer Antonio Ortega in his garden at his house in El Milagro. *Andy Sawyer, The Times-News, September 1, 1996.*

Various youth-focused services and programs have started at El Milagro over the years. A Head Start summer camp program started at El Milagro in 1996, when it supported eighty-four children of migrant workers, most of them from neighboring cities. In 2003, area resident Laurell Ingram began an outreach Christian ministry called Kids Klub for children living in the housing project. She and other volunteers organized clean-up projects, renovated classrooms, and hosted festivities.²¹⁸

In recent years, organizations have worked to integrate El Milagro residents with the greater Twin Falls community. In 2003, the Twin Falls Magic Valley Academy of Music formed El Milagro Children's Choir, open to all children in Twin Falls, to sing and learn Spanish. In 2004, the Idaho Migrant Council hosted a public celebration of El Día de los Niños to promote Mexican culture and awareness. Another organization connecting community members with the complex is YouthBuild El Milagro, which formed in 2012 to help teens and young adults with one-on-one mentoring.²¹⁹

6. Japanese Americans in Idaho

Early Japanese Immigration to Idaho

Japanese immigration to the United States began in the late nineteenth century. Idaho was one of the first states in which Japanese immigrants settled. Here they found employment in railroad construction and the sugar beet industry. Sugar factories built in the early 1900s in Idaho Falls, Nampa, and Sugar City succeeded in large part because of Japanese workers.²²⁰

Japanese immigrants faced increasing forms of racial discrimination soon after their arrival in the United States. Laws passed at the federal and state levels prohibited Japanese and other Asian immigrants from becoming naturalized citizens. In 1913, California passed the country's first alien land law, which prevented aliens ineligible for citizenship from purchasing land. A decade later, Idaho passed an anti-Japanese land law that was patterned after California's. The federal Immigration Act of 1924 banned further immigration from Japan.²²¹

Despite such racism, Japanese immigrants (Issei) and their American-born children (Nisei) created communities in the western United States. They established social and political organizations, churches, schools, and newspapers. By 1930, 1,421 people of Japanese ancestry resided in Idaho. Though they were represented in nearly every county, concentrated communities existed in the Upper Snake River region, namely Bannock, Bingham, and Bonneville Counties, and in Canyon County, adjacent to the Japanese American community in Oregon's Malheur County. The presence of Japanese American Citizens League chapters in Pocatello, Idaho Falls, Rexburg, and Boise Valley further underlined these concentrations in southeastern and southwestern Idaho.²²²

The 1940 U.S. census recorded 1,191 people of Japanese ancestry in Idaho. Of that figure, 36 percent were Issei and 64 percent were Nisei. The decrease in the state's Japanese American community from 1930 was due, in part, to deaths among the first generation of immigrants, some Issei moving out of state, and older Nisei leaving Idaho for educational and employment opportunities. In the pre-World War II era, Japanese Americans operated approximately 150 farms in Idaho. A 1946 study provided information on such farms in the Boise and Snake River Valleys, in southeastern Oregon and southwestern Idaho, an area known today as the Treasure Valley. The Japanese American farming community in Boise Valley was small and scattered prior to the war. Such farms produced primarily onions, potatoes, sugar beets, peas, lettuce, and carrots. The Snake

River Valley community, on the other hand, accounted for the majority of Japanese Americans in Idaho, with an estimated population of 950 in 1941. These farmers grew mostly sugar beets, potatoes, and onions. Japanese American residents in the Snake River Valley frequently visited nearby Ontario, Oregon, which prior to the war had a Japanese community hall, Japanese restaurant, and bi-monthly Buddhist church services. The Snake River Valley in general, and Ontario in particular, were known for being friendly to people of Japanese ancestry before, during, and after World War II.²²³

Forced Removal and Incarceration During World War II

The United States entered World War II following the December 7, 1941, Imperial Japanese naval attack on a U.S. naval base at Pearl Harbor in Honolulu, Hawaii. Western political leaders used this attack, alongside decades of anti-Japanese sentiment, to call for the removal of Japanese Americans from the West Coast. Despite no evidence that Japanese Americans posed any threat to national security, President Franklin D. Roosevelt issued Executive Order 9066 on February 19, 1942. This led to the forced removal and incarceration of 120,000 people of Japanese ancestry, two-thirds of whom were American citizens.²²⁴

General John L. DeWitt, commanding general of the U.S. Army's Western Defense Command, soon created military zones on the West Coast from which all people of Japanese ancestry would be removed. The area included all of California, the western halves of Oregon and Washington, and the southern half of Arizona. Over the spring and summer of 1942, the U.S. Army's Wartime Civil Control Administration (WCCA) moved Japanese Americans living in this area into temporary assembly centers. From these centers, Japanese Americans were moved into ten permanent concentration camps operated by the War Relocation Authority (WRA). Minidoka, in Jerome County, Idaho, was one of these camps. Each camp was similar, with barracks surrounded by barbed wire and guard towers. Some Japanese Americans were sent to other sites of confinement during the war, including additional facilities maintained by the WRA, internment camps run by the Department of Justice and U.S. Army, immigration detention stations, federal prisons, and farm labor camps such as that at Twin Falls.²²⁵

In December 1944, the U.S. Supreme Court decided unanimously in the case *Ex parte Mitsuye Endo* that the federal government could not indefinitely confine American citizens of Japanese ancestry. This led the U.S. War Department to allow Japanese Americans to return to the West Coast. By 1946, the last of the WRA camps closed. Many Japanese Americans returned to the West Coast but found conditions much changed. Due to the forced removal, most had had to sell their

properties, businesses, and homes. After the war, Japanese Americans started over. Some rebuilt their communities on the West Coast, others established new communities in the intermountain and midwestern states. The federal government acknowledged its wrongdoings with passage of the Civil Liberties Act of 1988. The act included a formal apology from President Ronald Reagan as well as redress payments of \$20,000 to every surviving former incarcee.²²⁶

Role in Agricultural Development

War Relocation Authority's Seasonal Leave Program

Nearly half of Japanese Americans on the West Coast had operated farms or worked as agricultural laborers prior to the war. Following the announcement of Executive Order 9066, business interests began requesting access to this potential workforce. Many of these requests came from sugar companies. Sugar was an essential wartime commodity. With the United States no longer importing sugar from foreign markets, due to the war with Japan, American farmers had increased their sugar beet acreage. In 1942, farmers planted more than a million acres of sugar beets, an increase of 25 percent from the previous season. Most of the existing workforce had left for wartime industrial jobs or military service. Farmers, especially in the intermountain states where half a million acres had been planted, desperately needed workers to cultivate and harvest the labor-intensive crop. Sugar companies, which contracted with farmers for the raw materials, led the calls for replacement laborers.²²⁷

WRA director Milton Eisenhower called a meeting of western governors in early April 1942. During the meeting, he hoped to finalize plans for the forced removal of Japanese Americans to inland concentration camps. He also wanted to explore possibilities of using this community as an agricultural work force. Many governors expressed anti-Japanese sentiments during the meeting, but Idaho's Chase Clark was especially hostile. He openly admitted his own racism, stating "I would hate it, even though I didn't know anything about it, after I am dead, to have the people of Idaho hold me responsible at a time like this for having led Idaho full of Japanese during my administration. I want to admit right on the start that I am so prejudiced that my reasoning might be a little off, because I don't trust any of them."²²⁸ Idaho Attorney General stated at the same meeting that "all Japanese should be put in concentration camps for the remainder of the war. We want to keep this a

white man's country."²²⁹ Clark also advocated for putting Japanese Americans in concentration camps, but initially protested against the placement of such a camp in Idaho. He also opposed bringing any Japanese American laborers into the state, despite outcry from his constituents that such labor was desperately needed.²³⁰

Given the racist rhetoric expressed by many of the governors, as well as fears of potential violence in communities where Japanese Americans might be sent, Eisenhower decided that the WRA would not pursue any farm labor program for the time being. State and local officials, however, took further action. Oregon governor Charles Sprague appealed to President Roosevelt as such sugar beet labor was needed in Malheur County. It was only after the president directed Eisenhower to make such laborers available to western states that the WCCA and WRA allowed Japanese Americans to leave temporary assembly centers for farm work, beginning in May 1942. With the labor crisis mounting in Idaho, Clark himself relented and allowed Japanese American laborers to enter the state. In June, he provided written assurance to the WRA that the state would pay these individuals prevailing wages; provide protection, housing, health care, and food; and arrange for all transportation.²³¹

The movement of Japanese Americans from temporary assembly centers to inland farms and labor camps marked the beginning of the WRA's Seasonal Leave Program. Between June 1942 and December 1944, the WRA helped implement more than 33,000 farm labor contracts (See Table 6-1). The WRA defined *seasonal leave* as agricultural work to be accomplished during a specified period of time in a specifically defined area. Most individuals and families on seasonal leave had to first be cleared by the Federal Bureau of Investigations, then they were issued permits stipulating where and for how long they were allowed to work outside the concentration camps. Once out on seasonal leave, one could apply for *indefinite leave* and permanently leave the concentration camps, though until January 1945, no one could return to the West Coast. The Seasonal Leave Program was part of the WRA's broader resettlement efforts to move Japanese Americans permanently away from the West Coast.²³²

Recruitment of Laborers

Sugar companies were the first to actively recruit Japanese American laborers from temporary assembly centers and concentration camps. Amalgamated Sugar Company, American Crystal Sugar Company, Great Western Sugar Company, Holly Sugar Company, and Utah-Idaho Sugar Company all utilized Japanese American labor during the war. These companies placed advertisements in concentration camp newspapers, such as those included by Utah-Idaho Sugar and Amalgamated Sugar in the *Minidoka Irrigator*. Such ads typically emphasized seasonal labor as an opportunity to escape the confines of camp. But they also marketed the work as the patriotic duty of Japanese Americans, ignoring the fact that the federal government had unjustly incarcerated these American citizens and denied them their civil liberties. Sugar company representatives visited sites of confinement and placed recruitment notices on community hall bulletin boards and in other public areas.²³³

YOU DON'T NEED TO WAIT ANY LONGER TO GET OUT

Every evacuee has been looking forward to the day when he could permanently leave the relocation center that has been his temporary residence, but not a real home, these long and tiresome months.

"Some day," he has said, "I'll leave here . . . to return to my former home, or to start over in a new and friendly community. Some day I'll be a part of America again . . . to produce or fight for it."

HERE ARE THE REWARDS:

- 1** Freedom to work for yourself and your family at prevailing high wages (rates of minimum pay for beet workers are guaranteed by Federal order);
- 2** Adequate housing (the Federal government requires every farmer to supply this before his offer of employment can be officially approved);
- 3** A new chance to make friends for yourself and for all other persons of Japanese birth or ancestry;
- 4** A stepping stone to permanent year-round employment in agriculture, or industry;
- 5** Healthful employment . . . for yourself and for other members of your family, if you have one, even down to fourteen-year-old boys and girls;
- 6** An opportunity to produce more food for freedom, thereby helping America win the war and the peace to follow;
- 7** A means of earning money for an education or for profitable investment, now or in the future.

SUGAR BEETS are the best way out for the greatest number of evacuees. When you accept a beet contract, take one with the organization that pioneered the way for evacuee job seekers nearly a year ago; take one with an organization that can give you a wide choice of locations and climates.

Utah-Idaho Sugar Company has factories in five states from the Dakotas to the Pacific Coast. Thousands of growers in hundreds of western communities are looking for evacuee help. We can put you in touch with the right place for you. For complete information see your project employment director or write to this pioneer sugar company.

Representatives from the sugar companies as well as the U.S. Employment Service staffed employment offices at assembly centers and concentration camps. In these offices, individuals reviewed contracts from farmers. Such contracts stipulated the work expected, wages, and housing. A range of housing was offered, from living quarters on private farms to permanent and mobile labor camps operated by the Farm Security Administration (FSA). The latter typically afforded better living conditions than private housing, as demonstrated by one Japanese American man who reported living in a rundown shack on a farmer's property that he said was no better than a chicken coop.²³⁴

Initially it was difficult to recruit laborers, as it was unclear how local communities might receive Japanese Americans. When sugar company representatives visited the Puyallup Assembly Center in June 1942, they found a newspaper clipping outlining a speech Gov. Clark had given to the Lions Club in Grangeville, Idaho, on May 22. In what became known as the "rat speech," Clark declared that "Japs live like rats, breed like rats and act like rats. We don't want them . . . permanently located in our state."²³⁵ Many Japanese Americans were apprehensive to travel to areas demonstrating such openly racist attitudes.²³⁶

The reception of Japanese American laborers in local communities varied. People who participated in the Seasonal Leave Program shared information via letters or articles in camp newspapers about their experiences. Those working in western Idaho and eastern Oregon generally reported being well received, while those working in Montana experienced blatant hostility. Some businesses, including a few in Twin Falls, refused to serve Japanese American patrons.²³⁷

But enough Japanese Americans reported back to assembly centers and concentration camps that the conditions were favorable that increasing numbers of people signed up for farm labor work in 1942 and 1943. Initially mainly men signed up for such work, but as the Seasonal Leave Program continued, more women and families left the concentration camps for agricultural work opportunities. People left the WRA facilities for many reasons: the ability to earn better wages, as they could earn more in a few days' time than in a month working in the camps; the opportunity to escape barbed wire and armed guards; and a chance to contribute to the war effort.²³⁸

Seichi Hayashida, in a 1989 oral history, spoke of his decision to sign up for agricultural labor in 1942:

...in order to get a leave, to leave the camp, you had to answer a lot of questions, and it was a temporary leave. You weren't leaving permanent. We had to come back within so many months...And since we were farmers – I was a farmer, my wife was from a farm family so – that was the only work that was really open at that time, the first year, farm work out in eastern Oregon, western Idaho and that's why we went

out, because I didn't like the life in the camp, you know being cooped up in a mile square with 10,000 other people. So, this is the reason we went out as soon as we could. I spent less time in camps than most of the people.²³⁹

Carl Nomura left Manzanar for farm work in Idaho in 1942. He first went to a mobile FSA camp in Paul and then lived in a former Civilian Conservation Corps camp turned permanent FSA facility in Rupert. In his 2003 memoir, he recalled that "a huge labor shortage developed in Idaho, Utah, Montana and Colorado as farmers lost their workers to the war effort. In desperation, the farmers were turning to us for help. We, in turn, were being offered a chance to venture outside the barbed-wire fence."²⁴⁰ Though he escaped the barbed wire, he did write of still being under guard while in the labor camps.²⁴¹

Figure 6-3. Japanese American laborers at the Twin Falls camp made curtains out of empty sugar sacks from Amalgamated Sugar Company. The company heavily recruited Japanese Americans for much needed sugar beet labor in the 1940s. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073755-D.*

Representatives from the Amalgamated Sugar Company arrived at the Sacramento Assembly Center in California on May 28, 1942, to recruit laborers to cultivate sugar beets in Idaho. A small group signed contracts to work in Twin Falls County's 6,500 acres of sugar beets, to be paid prevailing wages of \$9.50 per acre or forty-five cents an hour. They were given the option of living

at an FSA camp or in housing provided by local farmers. On June 2, thirty-five men and one woman arrived at the Twin Falls Migratory Farm Labor Camp. They were the first Japanese Americans to live and work at the camp.²⁴²

Sugar company representatives also recruited from the WRA concentration camps, once they opened in the summer and autumn of 1942. Laborers came to the Twin Falls Migratory Farm Labor Camp from Heart Mountain, Manzanar, Minidoka, and Poston. Located less than twenty-two miles from the Twin Falls camp, Minidoka provided the steadiest stream of Japanese American laborers between 1942 and 1944.²⁴³

Figure 6-4. A Japanese American laborer photographed at the Twin Falls camp in July 1942. Contributions to Agriculture

Figure 6-5. Japanese Americans who lived at the Twin Falls camp mainly worked with such crops as sugar beets, potatoes, and onions. These unidentified workers were photographed in July 1942. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073809-E.*

Japanese Americans contributed to agriculture across the United States. In 1942, during the first year of the WRA's Seasonal Leave Program, much of the work focused on cultivating and harvesting sugar beets in intermountain states. A June 1942 article in the *Pacific Citizen* included a U.S. Employment Service representative's declaration that Japanese Americans had salvaged Idaho's \$16 million sugar beet crop that spring. The same article noted that the laborers were not under armed guard. They were, however, under surveillance in labor camps, with movement outside of the camps restricted, and outside visitors limited. By the end of 1942, state and local officials, sugar company representatives, and farmers credited Japanese Americans with saving the sugar beet crops in Idaho as well as Montana, Wyoming, and Utah.²⁴⁴

²⁴⁴ "Japanese Workers Save Idaho Beet Crop," *Pacific Citizen*, June 18, 1942, 1, 7; Fiset, "Thinning, Topping, and Loading," 134.

Figure 6-6. Unidentified Japanese American who lived at the Twin Falls camp in 1942.

Figure 6-7. Much of the agricultural labor was stoop work, with Japanese Americans bent over in fields thinning sugar beets or harvesting potatoes. *Library of Congress, Prints & Photographs Division, FSA-OWI Collection, LC-USF34-073812-E.*

Japanese Americans also provided labor for other crops in Idaho, such as potatoes, onions, and tree fruits. In the autumn of 1943, local interests recognized Japanese Americans for saving both the sugar beet and potato crops that year.²⁴⁵

When the Seasonal Leave Program ended in late 1944, more than half of the participants had been able to convert their seasonal leave into indefinite leave from the concentration camps. Over the three years of the program, Japanese American laborers were estimated to have saved a fifth of the country's sugar beet acreage.²⁴⁶

Post-war Japanese American Community in Idaho

Thousands of Japanese Americans lived and worked in Idaho during World War II. Many arrived on seasonal leave permits issued by the WRA, enabling them to leave temporary assembly centers and concentration camps for a period of time. Among the concentration camps, most workers came from Minidoka, but others also arrived in the state from Gila River, Granada (Amache), Heart Mountain, Manzanar, Poston, Topaz, and Tule Lake. Some individuals and families were able to secure permanent employment and worked with the WRA to convert their seasonal leave into indefinite leave.²⁴⁷

After the war, 3,932 Japanese Americans resettled in Idaho. Many established homes in the Treasure Valley, an area covering the Boise and Snake River Valleys, as well as Malheur County, Oregon. The Idaho counties that saw the greatest increase in Japanese American residents in the postwar period were Canyon, Payette, and Washington, with particular concentrations near the towns of Caldwell, Payette, and Weiser. These counties all border Malheur County, Oregon, whose Japanese American community grew from 137 in 1940 to 1,170 in 1950, an increase of 750 percent. Many Issei, Nisei, and Sansei (third generation) settled in the Treasure Valley after the war, finding it more welcoming than the homes they had been forced to leave on the West Coast. The city of Ontario served as a center of the Treasure Valley's Japanese American community, with Japanese restaurants and grocery stores, a tofu manufacturing plant, Buddhist temple, Methodist church, and medical practice run by a Japanese American doctor.²⁴⁸

The Japanese American population in the Magic Valley in Southern Idaho did not experience the same post-war growth as Treasure Valley. Between 1940 and 1950, the Japanese American community of Twin Falls County, site of the Twin Falls camp, grew from forty-six to seventy-eight. Jerome County, where Minidoka was located, gained only a single Japanese American resident during the same period, per federal census records. Though Japanese Americans undoubtedly

contributed to agriculture in southern Idaho, most did not settle permanently in this part of the state in the immediate post-war years.²⁴⁹

²⁴⁹ Sims, “The ‘Free Zone’ Nikkei,” 249.

7. Latino Community in Idaho

Early Contributions of Mexican Laborers in Regional Agriculture

Latino²⁵⁰ people first began arriving in Idaho in the 1860s. The majority were men from Mexico, moving north to work as miners, agricultural laborers, railroad workers, mule packers, trappers, and ranchers. In 1870, the U.S. Census Bureau recorded sixty people of Latino heritage as living in Idaho Territory. Few settled in the region in the nineteenth century.²⁵¹

Mexican immigration to Idaho increased in the first decades of the twentieth century. As the state's agricultural industry expanded, farmers needed laborers to meet growing demands. The federal government exempted Latino laborers from recently passed immigration laws which targeted certain nationalities, required literacy tests, and imposed other restrictions. Men were encouraged to immigrate with their families, in an effort to both prevent them from breaking work contracts and discourage integration into Idaho communities.²⁵² In an oral history, Felicitas Perez Garcia recalled moving with her husband to Shelley in 1910 to work at a sugar beet processing plant. They could not find any housing, so they eventually built their home and furnishings. She recalled, "I made my bed out of boards, and I made the covers out of corn sacks. I would sew four together. Then I got some grass, or whatever there was, and put it in the middle... I would do everything possible. We would find houses that were left empty and we would get things. I made curtains from the flour sacks."²⁵³

Demand for agricultural workers increased during World War I and sugar companies directly contracted Mexican laborers to plant, cultivate, and harvest sugar beets. The Utah-Idaho Sugar Company contracted some 1,500 Mexicans in 1918 to work in both Utah and Idaho. Shortly upon their arrival in Idaho, many laborers filed complaints with the Mexican consulate in California. They stated that their wages, housing, and availability of work were not what they had agreed to with the sugar company recruiters. In response, William McVety, Idaho state labor commissioner, investigated conditions for Mexican workers living in Twin Falls, Idaho Falls, and Blackfoot. Former Idaho governor William J. McConnell conducted additional investigations in Blackfoot. Subsequent reports did highlight racism faced by such workers, but often blamed Mexicans for the conditions they faced. Little changed for Latino laborers, who continued to be recruited by both companies and

²⁵⁰ This context uses the term Latino rather than Latinx, following current practice of the Community Council of Idaho. Modern historical scholarship often uses the term Latinx in reference to people who live in the United States and have ancestral and cultural ties to Latin America. Latinx is an inclusive and gender-neutral term that replaces Latino and Latina.

farmers in the 1920s and 1930s. Cultural activist and historian Ana María Nevárez-Schachtell found that such recruiters made promises to Mexican immigrants that they never fulfilled.²⁵⁴ These individuals, according to Nevárez-Schachtell, “decided to take the risk and leave their families, their lands, and start a new life and come to El Norte, and they were greatly disappointed. First of all, there was no respect for human rights and the companies that offered them housing and good salaries … it was all lies.”²⁵⁵

The Bracero Program

As the twentieth century progressed, demands for agricultural labor in Idaho continued. Reclamation projects in Idaho converted millions of acres of arid land into viable farmlands by the end of the 1930s. The following decade, agricultural labor shortages plagued many western and intermountain states, including Idaho. The onset of World War II drained previous pools of farm workers, as many left for wartime industrial jobs or joined the military. In 1942, the labor crisis threatened farm production. In response, the governments of the United States and Mexico issued a series of agreements allowing millions of Mexican men to work under contract in the United States for short periods of times. In August 1942, President Franklin D. Roosevelt issued an executive order that established the Mexican Farm Labor Program.²⁵⁶

The Mexican Farm Labor Program was better known as the Bracero Program, the name for the Mexican workers as they labored with their arms and hands, “brazo” being the Spanish word for arm. Nationally, the program lasted from 1942 to 1964, with approximately 4.6 million contracts issued. Most were agricultural labor contracts, but braceros also worked in railroad construction and maintenance during the 1940s. Through the program, a bracero entered the United States under a six- or twelve-month contract. He was then assigned to a particular region of the country. Once a contract expired, the bracero was required to return to Mexico. There he could sign another contract and then return to the United States to work. During the war, various federal government agencies coordinated with private agricultural companies and farmers to oversee the recruitment, transportation, housing, and subsistence of workers.²⁵⁷

Figure 7-1. Bracero harvesting potatoes in Oregon. *Oregon State University Special Collections and Archives, P120:2734.*

More than 15,000 Mexicans were recruited to work in Idaho through the Bracero Program. They made up the largest percentage of agricultural laborers transported by federal agencies during World War II. Other groups of workers recruited to provide critical wartime farm labor included white migrants, Native Americans, Jamaicans, and Japanese Americans (See Chapter 6 for more information on Japanese Americans in Idaho). In 1946, braceros accounted for 70 percent of non-local workers in the Northwest Division of the U.S. Extension Service, an area including Washington, Oregon, Idaho, Utah, Montana, and Wyoming.²⁵⁸

²⁵⁸ Gamboa, *Mexican Labor & World War II*, 57–58.

Amalgamated Sugar Company recruited the first Mexican workers to the Twin Falls Migratory Farm Labor Camp in 1942. It is not known if these individuals were recruited through the Bracero Program or through private efforts of the company. The workers joined others already living at the camp, including white migrants and Japanese Americans. By 1947, more than a thousand Mexicans were working in the Twin Falls area, with at least fifty living at the Twin Falls camp.²⁵⁹

Japanese Americans incarcerated by the federal government during World War II had provided a steady stream of agricultural laborers. Japanese Americans arrived at the Twin Falls Migratory Farm Labor Camp from several concentration camps, with Minidoka providing the highest number of workers. When the U.S. military began drafting Japanese American men, the available workforce was cut nearly in half. Sugar companies, farmers, and other interests increasingly relied on Mexican laborers through the Bracero Program.²⁶⁰

Mexicans participating in the program faced considerable discrimination and racism across the United States. In Idaho, braceros organized strikes to protest mistreatment, low wages, and poor housing conditions. In 1945, Victor Prock, while living and working at the Twin Falls Migratory Farm Labor Camp, was arrested for being a labor agitator. He sought a one cent raise for onion topping and had tried to rally other workers around him. He was fined ten dollars. In 1946, hundreds of Mexican workers in the Treasure Valley went on strike. They protested against local sugar beet farmers who had set hourly wages twenty cents lower than the rate established by the extension service. From labor camps in Nampa, Marsing, Franklin, and Upper Deer Flat, the workers marched in the streets of Nampa and refused to work until the standard wage was met. Farmers agreed to meet the wages, but county officials threatened to deport anyone who violated the terms of the strike. The Mexican consulate in Salt Lake City intervened repeatedly on behalf of striking braceros. By the end of 1946, the Mexican government refused to send additional workers until conditions improved.²⁶¹

The continuation of discrimination, as well as substandard working and living conditions, led to the closure of the Bracero Program in Idaho in 1948. The program continued nationally for another sixteen years. Like elsewhere in the United States, the program created an informal network of migration from Mexico to Idaho. Many braceros remained in the state after their contracts expired and helped grow the region's Latino community.²⁶²

The Community Grows

Latino individuals and families continued to move north after the Bracero Program ended. People migrated from California and Texas to Idaho for work. Sugar companies continued to recruit Latino workers. Amalgamated Sugar Company, with factories in Nampa, Idaho, and Nyssa, Oregon, recruited Mexican families from Rio Grande Valley, Texas, to work in sugar beet fields from spring to autumn. Desperate for workers, companies would sometimes offer loans for travel expenses.²⁶³

Once sugar beet season was over, migrant families moved to the next work opportunity. Humberto Fuentes, founder of the Idaho Migrant Council, recalled the annual movement of his own family, “From Nampa, we would go to east Idaho for the potato harvest in the Pocatello and Blackfoot area. From there, we would head to west Texas where we would work for two or three weeks. Then, we would get back to the Rio Grande Valley around November or in time for Christmas. The following year, we did the same thing again.”²⁶⁴

This new wave of Latino laborers faced similar discrimination as the braceros before them. Latino people experienced racism in hiring processes, attaining housing, and in businesses such as restaurants and movie theaters. Esperanza Garcia first moved to Idaho in 1955. Like other Mexicans at the time, the then seventeen-year-old and her family had been recruited from Texas by Idaho farmers. For a few years, they followed migrant labor opportunities in Idaho, Oregon, California, and Texas. She and her family eventually settled in Canyon County, Idaho. She recalled that “The situation in Idaho in those years ... we often talk about the signs that read, ‘No Dogs or Mexicans allowed.’ Discrimination was very much alive. You couldn’t speak Spanish in a store. They would tell you to speak English or get out.” Mexican American Antonio Rodriguez recalls that starting in about 1959, signs went up in businesses in Nampa stating they would not serve Jews, Mexicans, or Native Americans.²⁶⁵

Idaho State Historical Society, 76-102.65a.

In recent years, the number of seasonal laborers in Idaho has decreased. This is due in part to greater industrialization in agricultural operations, meaning fewer people are needed to get the work done in fields and factories, and because more formerly transient laborers are settling into communities. Lucinda Padilla, a migrant liaison for the Twin Falls School District, noted in 2016 that most of the families do not want their children to move and risk missing school. That year, the district's migrant coordinator Abby Montano estimated that 80 percent of the families they served in the school district's migrant program were becoming "more stable" and not following annual work cycles in other cities.²⁶⁶

Latino Community in Idaho Today

Immigration from Mexico to Idaho continued to grow in the late twentieth century. Immigration from other countries in Latin America, particularly Central America, also expanded in the late twentieth and early twenty-first centuries. Increasingly, the Latino community in Idaho, like the entire United States, is made up of U.S. citizens.²⁶⁷

The Latino community is the fastest growing population in Idaho. According to the Idaho Department of Labor, between 2010 and 2019, the Latino population increased by 30.5 percent. Latino account for 12.8 percent of Idaho's population, less than the rest of the country with an overall 18.5 percent Latino population.²⁶⁸

As of 2019, Twin Falls and the surrounding Magic Valley contain the largest proportion of Latinos in the state, with 24.7 percent. This is due mainly to farms and food processing operations that employ Latino workers. Other Idaho regions contained the following Latino populations, as of 2019: southwestern, 14.1 percent; southeastern, 11.9 percent; eastern, 11.7 percent; northern, 4.5 percent; and north central, 4.2 percent.²⁶⁹

²⁶⁷ McFarland, "Growing Hispanic population part of Idaho's history."

²⁶⁸ Nicole Foy, "Report: Idaho's Latino population grew faster than the rest of the state's last year," *Idaho Statesman* (Boise), July 18, 2020, <http://www.newsbank.com>.

²⁶⁹ Foy, "Report: Idaho's Latino population grew faster than the rest of the state's last year."

The Latino community has had a presence in Idaho since before it was a state. As activist and historian Ana María Nevárez-Schachtell reflected, “the Mexican worker is very much part of the state of Idaho, but regrettably the history was left out of the history books. The Mexican worker has suffered a lot of discrimination and here we are, so many years later, still struggling.”²⁷⁰

²⁷⁰ Foy, “We do not like the Mexican.”

8. BIPOC Agricultural Workers in Idaho Today

Black, Indigenous, and People of Color in Idaho's Agricultural Industry

The development and success of Idaho's agricultural industry has depended on the labor of people of color. In addition to Japanese American and Latino workers addressed in depth in this context due to their connection to El Milagro, Black, Indigenous, and other people of color have made contributions to Idaho's agricultural growth. Records from 1943 state that fifty Jamaicans lived at the camp (some of the 550 Jamaicans the Farm Security Administration arranged to come to work in Idaho that year), and in 1946, fifteen Black individuals resided in the camp. Black farm laborers also came to Idaho from Arizona in the 1950s to work in the fields. Though initial research did not connect Indigenous peoples to El Milagro directly, Navajos came to Twin Falls in 1946 to harvest sugar beets during what the *Idaho Statesman* called a "critical shortage of harvest workers"—a shortage that threatened the agricultural industry during and immediately following World War II (See Chapters 3, 6, and 7 for more information about this shortage).²⁷¹ Newspaper coverage from 1970 indicates that Idaho's agricultural industry continued to be assisted by Indigenous peoples living outside of the state, with 800 Indigenous people recruited from New Mexico to move sprinklers on large irrigation projects in 1969 and 1970.²⁷²

People of color perform crucial labor in Idaho's agricultural industry, as well as working in technology, forestry, construction, healthcare, and other industries. In 2016, more than 4,000 people came to Idaho as guest workers, many of them from Mexico. Many refugees from countries such as Afghanistan, Burma, Congo, Eritrea, Iraq, and Sudan, have settled in Twin Falls in recent years. A 2016 article from the *Washington Post* discussed codependency between the white residents of Twin Falls and recent refugees. While racism among some local residents has created vocal opposition to immigration and the refugee community, the agricultural industry relies on the labor of new immigrants and refugees. The article notes that employers from Twin Falls County's farms and factories said that "they would be lost without the low-wage workforce." An Idaho Dairymen's Association representative said "The one thing we hear repeatedly from different employers, they're

Seasonal and Low-Income Housing in Twin Falls

Many communities in the Magic Valley and elsewhere in Idaho are growing and in need of quality housing for seasonal laborers and lower-income individuals. Community Council of Idaho operates four housing complexes in southern Idaho in addition to El Milagro: Colonia de Colores, in Twin Falls; Proyecto Esperanza, in Heyburn; El Rancho Grand Estates, in American Falls; and Colonia Cesar Chavez, in Blackfoot.²⁷⁴

In 2018, Community Council of Idaho began an effort to redevelop El Milagro, with a goal to create a community gathering space and affordable housing. The organization has a three-phase plan to overhaul the complex, building all new housing, a professional business park for nonprofit

businesses, and a community gathering space for youth programs, health clinics, dental services, computer labs, and recreational areas. Ultimately, the project seeks to expand capacity, from 95 total units in 2019 to approximately 240 units.²⁷⁵

Phase I of the project, construction of sixty units of housing, was selected for Low-Income Housing Tax Credits in 2018. Community Council of Idaho estimates the cost of Phase I is \$10 million. The organization is conducting a capital campaign, seeking grants and private donations, to raise money to complete the entire project.²⁷⁶

The proposed redevelopment of El Milagro calls for removal of most of the original buildings at the complex. One of the bathroom facilities, known as comfort stations, will remain. This building will include interpretive signs about the history of El Milagro. Additionally, one of the barracks-style buildings will be rehabilitated or reconstructed.
